DEPARTMENT OF DEFENSE
Washington, D. C. 20301

Nontactical Wheeled Vehicles Treatment, Painting, Identification Marking and Data Plate Standards.
MIL-STD-1223AA

1. This Military Standard is approved for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: US Army Tank-Automotive Command, ATTN: AMSTA-UED, Warren, MI 48397-5000, by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

FOREWORD

This standard establishes requirements for treatment, painting, identification marking and data plates for nontactical wheeled vehicles of the Department of Defense and provides a reference for procurement action. This standard is limited to work which is usually performed by the manufacturer.

1 SCOPE

1.1 Purpose. This standard prescribes requirements for treatment, painting, identification marking and data plates for self-propelled and towed vehicles procured for general nontactical use by the Government.

1.2 Exemptions. Special purpose vehicles are exempt from the general provisions of this standard. Procurement documents should indicate departmental requirements for these vehicles.

2 REFERENCED DOCUMENTS

2.1 Government documents.

2.1.1 Specifications, standards and handbooks. Unless otherwise specified, the following specifications, standards and handbooks of the issue listed in that issue of the Department of Defense Index of Specifications and Standards (DoDISS) specified in the solicitation form a part of this standard to the extent specified herein.

SPECIFICATIONS

FEDERAL

L-S-300	- Sheeting and Tape, Reflective: Nonexposed Lens, Adhesive Backing.
TT-C-490	- Cleaning Methods and Pretreatment of Ferrous Surfaces Organic Coatings.
TT-E-485	- Enamel, Semi-gloss, Rust-inhibiting.
TT-E-489	- Enamel, Alkyd, Gloss (for Exterior and Interior Surfaces).
TT-E-529	- Enamel, Alkyd, Semi-gloss.
TT-L-32	- Lacquer, Cellulose Nitrate, Gloss, for Aircraft Use.
TT-P-636	- Primer Coating, Alkyd, Wood and Ferrous Metal.
TT-P-664	- Primer Coating, Synthetic, Rust-inhibiting, Lacquer-resisting.

MILITARY

MIL-P-14553	- Primer Coating, Dipping Automotive.
MIL-C-21067	- Coating Compound, Synthetic Rubber, for Exposed Steel Surfaces.
MIL-M-43719	- Marking Materials and Markers, Adhesive, Elastomeric, Pigmented; General Specification for.

STANDARDS

FEDERAL

FED-STD-297	- Rustproofing of Commercial (Nontactical) Vehicles.
FED-STD-595	- Colors.

3 DEFINITIONS

Not applicable.

Source: https://assist.dla.mil -- Downloaded: 202610-26T07:42Z
Check the source to verify that this is the current version before use.

4 GENERAL REQUIREMENTS

4.1 Treatment, painting, marking and name plates. As required and specified by the applicable procurement document, the treatment, painting, marking and data plates shall be applied to the vehicle as specified herein for the appropriate military service. Unless otherwise specified, all color numbers cited in this standard shall conform to FED-STD-595.

4.1.1 Standard identification marking. The identification marking applied to the vehicle shall consist of the departmental or agency identification, registration number, and legend.

4.1.2 Special markings. Except as specified herein the unit identification and other special markings, such as national symbol, military police, armed services police, and safety markings, shall be applied upon receipt by the using service.

4.1.3 Concealed markings. Vehicles requiring concealed markings in accordance with contractual provisions shall be furnished with a name plate only, permanently attached to the underside of the rear trunk lid, or if not so equipped, on another concealed but readily accessible interior surface such as on the inside of the map compartment lid.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:42Z
Check the source to verify that this is the current version before use.

5 DETAILED REQUIREMENTS

5.1 Treatment and painting. All weld slag and rust shall be removed prior to treatment. Weld spatter on readily visible, accessible areas shall be removed prior to treatment. Except as otherwise specified herein (see 5.1.1 through 5.1.4.2), all exposed metal surfaces shall be completely cleaned, primed, and painted in the exterior color specified. Except as otherwise specified herein (see 5.1.1 through 5.1.4.2), all sheet metal interior surfaces shall be painted or, when not exposed for painting, shall be treated or coated to resist corrosion. Otherwise, painting and preparation for painting shall be with the manufacturer's current materials and according to current processes. Stainless steel surfaces to be painted shall be cleaned with a solvent or dilute phosphoric acid solution followed by a basic zinc chromate vinyl butyral wash coat prior to painting. The top surface of the dash panel shall minimize reflected light by using lusterless paint, non-reflective paint, a pebbled surface or other textured pattern. Wooden ladder parts shall be coated with a clear protective finish. All wood parts on the vehicle (except the wood deck of lowbed and tilt deck trailers and semitrailers) that are not sealed from the atmosphere shall be painted.

* 5.1.1 Trucks and truck tractors. Except as otherwise specified in 5.1.1.3, radiator shutters; radiator grilles; reflector, light, directional signal and mirror housings; mirror support arms; bumpers; rims; wheels; and areas where paint would interfere with function, may be the manufacturer's current standard finish and color. Except as otherwise specified in 5.1.1.3, chrome plated, cadmium plated, stainless steel and anodized aluminum items need not be painted. Exhaust mufflers and exhaust pipes need not be painted. Pintle assemblies, brush guards, winches, truck tractor deck plates, and fifth wheels may be painted black. Steel fuel tanks shall be painted black or the exterior color of the vehicle. Except as otherwise specified in 5.1.1.3, aluminum fuel tanks need not be painted.

5.1.1.1 Chassis frame, undercarriage and underbody. Chassis frame parts and undercarriages may be painted black with the manufacturer's standard chassis paint. Painting of the chassis frame parts and undercarriages is required only to the extent that all areas viewed from an eye level height of two feet or more at the side, front, and rear of the completed vehicle (with body installed) are painted and free of visible rust. Painting of the frame and undercarriage areas not visible from these positions shall be in accordance with the chassis manufacturer's standard practice for identical model vehicles furnished to the general public. Underbody areas of body on chassis type

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:42Z
Check the source to verify that this is the current version before use.

vehicles not visible from these positions shall be at least cleaned, treated and primed in accordance with 5.1.1.4. Dump and elevating bodies shall be observed with the body in the up position.

* 5.1.1.2 Truck body on chassis. On maintenance bodies the interior of the cabinets shall be treated and painted the same as the exterior. The interior color of the cabinets shall be the same as the exterior, or gloss gray matching color chip No. 16187. Galvanized shelving need not be painted. The loadspace shall be the same color as the exterior. Except as otherwise specified in 5.1.1.3, bodies of bright finish aluminum, anodized aluminum surfaces, or stainless steel with a 2B or better finish shall not be painted. Except as otherwise specified in 5.1.1.3, when prepainted aluminum is furnished, the color shall be standard white. Except as otherwise specified in 5.1.1.3, aluminum van body roofs need not be painted. Platforms on stake and platform truck bodies may be painted black in lieu of the exterior color of the vehicle. When black marking is required for stake trucks, the marking background area color (the back end of the platform) shall be the same color as the exterior of the vehicle.

* 5.1.1.3 Semigloss and lusterless colors. When a semigloss or lusterless color is specified in procurement documents, the body exterior, including the roof and all exterior panels, and chassis and body exterior trim shall match the exterior color specified.

5.1.1.4 Truck body on chassis cleaning, treatment and priming. Before painting, all body steel required to be finish painted in the exterior color specified shall be cleaned to remove all oil, grease, wax, dirt, scale, rust, and other foreign matter. The steel shall be rinsed to remove any alkali or acid after the cleaning operation. The steel shall then be subjected to an iron or zinc phosphate solution by either the dip or spray method. The metal shall be rinsed with clean water and sealed with a chromic acid rinse or equal and air dried prior to priming. The primer shall be applied within six hours after the final rinse.

5.1.1.5 Salt spray resistance. Exposed non-corrugated steel sheet and plate used in the body that is required to be finish painted in the exterior color specified shall be capable of withstanding 240 hours of salt spray when tested in accordance with ASTM B117. A sheet steel specimen representative of each type of steel (plain, galvanized or galvannealed) shall be run through all steps of the cleaning and treating process, including priming. The time period between final rinse and prime painting shall be representative of the maximum period that will be encountered during production. The sample(s) shall receive no special or extraordinary care through the process. The primed

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:42Z
Check the source to verify that this is the current version before use.

specimen(s) shall be scored from corner to corner using a sharp knife. After the test, the specimen(s) panels shall exhibit no failure or rusting, including not more than 1/8-inch rust or blister creepage from the scored lines.

* 5.1.1.6 Certification, truck body on chassis. For bodies on chassis containing non-corrugated sheet steel or plate required to be finish painted in the exterior color specified, a certification by the company cleaning, treating and prime painting the body shall be made to the government at the first production vehicle inspection. The certification shall state that tests in accordance with 5.1.1.5 have been run; the date the tests were run; the company running the tests; the cleaning, treatment and priming procedures used on the specimen(s) and the bodies under contract were the same; and the specimen(s) passed the test(s). Certification based on test results over one year old at the time the bodies under contract were processed will not be acceptable.

5.1.2 School bus body. School bus body treatment and painting shall be in accordance with 5.1.1, 5.1.1.1, 5.1.2.1, and 5.1.2.2 herein.

5.1.2.1 Bus exterior. Metal parts shall be thoroughly cleaned of all rust by an acid or mechanical rust removing process. After treatment the surfaces of the parts shall show no sign of rust visible to the naked eye and shall be coated with a balanced phosphate solution containing nitrite as an accelerating agent or other phosphate solution which is known to accomplish equivalent results, until a uniform crystalline phosphate coating is obtained. The coated parts shall be rinsed with clean water followed by a second rinse with a dilute chromic acid solution and dried. Immediately after drying, the interior surfaces of the exterior and interior panels, and the exterior surfaces of the interior structural members, shall be coated in accordance with one of the following methods at the option of the contractor:

a. A coat of primer conforming to TT-P-636, TT-P-664, MIL-P-14553, or epoxy resin shall be applied, not less than 0.75 mil thick and baked on prior to assembly, except the underbody may be primed and air dried after assembly. The primer shall be retouched and air dried at any point or surface which becomes exposed during assembly. The exterior finish paint shall include a requisite number of coats of enamel conforming to TT-E-489 or lacquer conforming to TT-L-32 necessary to provide a film not less than 1.25 mils thick. Exterior finish paint is not required on the underbody or inside surfaces of the body skirting.
b. An acrylic lacquer or enamel finish with a compatible primer system to assure adhesion of finish may be substituted for the primers and finish enamel specified in "a" above.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:42Z
Check the source to verify that this is the current version before use.

c. On bodies where zinc coated steel is employed for body panels and structural members, the unexposed surfaces do not require priming and the underbody and inside surfaces of the body skirting do not require priming or finish painting. All welded areas of the underbody shall have a primer coat. The primer for exposed surfaces to be color painted shall be epoxy resin, zinc chromate, or synthetic primer conforming to TT-P-636, TT-P-664 or MIL-P-14553. The primer shall be baked. The exterior finish paint shall include a requisite number of coats of enamel conforming to TT-E-489 or lacquer conforming to TT-L-32 necessary to provide a film not less than 1.5 mils thick.

d. Two coats of synthetic rubber compound, conforming to MIL-C-21067 Charcoate or equal, shall be baked on or properly air dried between coats. Complete coating shall be a minimum of 4.0 mils thick. Rub rails of the body, and also mating surfaces, shall be double coated inside before assembly. After the body has been assembled, the entire outside of the body shall be primed. The primer shall conform to TT-P-636, TT-P-664 or MIL-P-14553. The exterior finish paint shall be enamel conforming to TT-E-489 or lacquer conforming to TT-L-32. The exterior finish paint is not required on the underbody or inside surfaces of the body skirting.

5.1.2.2 Bus interior. The interior painting of sheet metal surfaces shall consist of at least two coats of enamel conforming to TT-E-489 or lacquer conforming to TT-L-32. The color of the interior shall coordinate with the exterior color and the color of the upholstery. All roof and side panels on the interior of the bus shall be the same color.

* 5.1.3 Automobile sedans, station wagons, scooters, snowmobiles, and motorcycles. Radiator grilles, bumpers, headlight and taillight rings, exterior rearview mirror housings and mounting brackets, and other exterior trim shall be chrome-plated, stainless steel, plastic, or anodized aluminum. Painting of the chassis parts and undercarriage shall be in accordance with the chassis manufacturer's standard practice for identical model vehicles furnished to the general public.

* 5.1.4 Trailers and semitrailers. Except as otherwise specified herein, the vehicle interior and exterior ferrous metal surfaces shall be prepared and painted as follows:

a. Surface cleaning: Ferrous metal surfaces shall be cleaned in accordance with the applicable method of TT-C-490.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:42Z
Check the source to verify that this is the current version before use.

b. Painting and priming: Compatible primer and exterior finish shall include a sufficient number of coats to provide the manufacturer's recommended thickness to assure retention of paint under all normal operating conditions and under all types of weather. Priming and painting shall include any of the following systems:
   (1) Synthetic enamel:
      (a) Apply primer conforming to TT-P-636, TT-P-664, or MIL-P-14553, as applicable.
      (b) Apply enamel conforming to TT-E-485, TT-E-489, or TT-E-529, as applicable.
   (2) Lacquer, cellulose nitrate, gloss:
      (a) Apply primer conforming to TT-P-636, TT-P-664, or MIL-P-14553, as applicable.
      (b) Apply lacquer conforming to TT-L-32.
   (3) Lacquer, acrylic: Apply acrylic lacquer finish with compatible primer system to assure adhesion.

c. Paint application: The painting shall be performed in a well-ventilated and protected area that is clean and dry. Paint shall not be applied in a moist or dusty atmosphere. The area shall have an ambient temperature of not less than plus 50 degrees Fahrenheit (°F). The paint and surface to be coated shall be approximately the same temperature, except when hot spray is used. All painting equipment shall be properly maintained and kept free and clean of oil, dirt, scum, residue, and shall be free of moisture just prior to painting. All materials shall be thoroughly mixed and there shall be no separation of materials during painting operations.

d. Time of application: The primer shall be applied as promptly as possible and, in any case, within 6 hours after the surface has been prepared for painting. This shall apply particularly in the case of metal parts that have been cleaned and given a surface treatment. Previous coats of paint shall be dry before subsequent coats are applied.

e. Surfaces after painting: After application of the final film of paint, the surfaces shall be smooth and uniform and shall be free from grit, seeds, streaks, running, sagging, wrinkles, pin holes, craters and non-uniformity of specified color.

17

Check the source to verify that this is the current version before use.

Except as otherwise specified in 5.1.4.1, bodies of bright finish aluminum, anodized aluminum surfaces and stainless steel surfaces with a 2B or better finish shall not be painted. Except as otherwise specified in 5.1.4.1, when prepainted aluminum is furnished, the color shall be the manufacturer's standard white. Except as otherwise specified in 5.1.4.1, when the trailer or semitrailer body consists substantially of bright finish aluminum, anodized aluminum, 2B or better stainless steel, or prepainted aluminum, the exterior color of painted members may be in a matching color with a black undercarriage in lieu of being painted the exterior color specified. Except as otherwise specified in 5.1.4.1, van type semitrailer roof panels and cap rails of galvanized copper-bearing steel or of aluminum need not be painted. The interior of trailer vans shall be as specified in the vehicle specification.

* 5.1.4.1 Semigloss and lusterless colors. When a semigloss or lusterless color is specified in procurement documents, the exterior, including the roof and all exterior panels, and chassis and body exterior trim shall match the exterior color specified.

* 5.1.4.2 Appurtenances (trailer and semitrailer). Except as otherwise specified in 5.1.4.1, reflector, taillight, clearance light, and directional signal housings may be the manufacturer's current standard finish and color. Except as otherwise specified in 5.1.4.1, wheels, bumpers, and exterior trim shall match the exterior color specified, except that chrome-plated, cadmium-plated, stainless steel, anodized aluminum, and plastic surfaces need not be painted. When cast spoke wheels are furnished, wheel flanges and hub caps shall be painted the same color as the vehicle. On disc wheels, wheel hubs, hub flanges, and hub caps shall be painted black or the same color as the exterior of the vehicle. Rims and locking rings shall be treated in accordance with the manufacturer's standard practice. The chassis frame and undercarriage parts may be painted the manufacturer's standard black in lieu of the exterior color specified.

5.1.5 Exterior colors. Except as specified in procurement documents, exterior colors shall conform to table I for the appropriate military service or agency and vehicle type. Color numbers shall conform to FED-STD-595.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:42Z
Check the source to verify that this is the current version before use.

TABLE I. Exterior colors.

Service or agency	Vehicle type	Color number	Color
Army	All	See 5.1.5.1	Manufacturer's standard
Army National Guard	All	See 5.1.5.1	Manufacturer's standard
Navy	All	See 5.1.5.2	Gloss white
Air Force	All	15045	Gloss blue
Marine Corps	All	See 5.1.5.2	Gloss white
Defense Logistics Agency	All	See 5.1.5.2	Gloss white
Department of Defense	Sedans and station wagons	17038	Gloss black
Department of Defense	All others	16187	Gloss gray

* 5.1.5.1 Army and Army National Guard exterior colors. The exterior color of Army and Army National Guard vehicles shall be the widest assortment of the manufacturer's standard, gloss, light or medium colors (one color per vehicle) possible on any given contract. The exterior color of the cab and body shall match (except for bright finished aluminum, anodized aluminum, prepainted aluminum and 2B stainless steel bodies, see 5.1.1.2).

5.1.5.2 Navy, Marine Corps and Defense Logistics Agency exterior color. The exterior color of general service vehicles furnished the Navy, Marine Corps and Defense Logistics Agency shall be the manufacturer's standard gloss white which provides the closest match to color chip 17886. The exterior color of the cab and body shall match (except for bright finished aluminum, anodized aluminum, prepainted aluminum and 2B stainless steel bodies, see 5.1.1.2).

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:42Z
Check the source to verify that this is the current version before use.

* 5.2 Wood and plywood preservative treatment. When wood treatment is required by specifications or other procurement documents, the following shall apply. Prior to preservative treatment, wood and plywood surfaces shall be dry and thoroughly cleaned of dirt, grease and other foreign matter. Wood and plywood parts shall contain not more than 19 percent, by weight, of moisture before and after treatment. Where practicable, wood and plywood parts shall be cut to final dimensions and boring and shaping operations shall be completed prior to treatment. All untreated exposed areas resulting from subsequent fitting of such parts shall be liberally brushed with a preservative composed of 2.5 - 5.0 percent, by weight, of solubilized copper-8-quinolinolate conforming to AWPA Standard C29.

5.2.1 Wood parts other than plywood.

5.2.1.1 Closed type bodies. Wood parts used on closed type bodies such as bus, ambulance, van and refrigerator vans shall be pressure treated with solubilized copper-8-quinolinolate. Treatment, composition of preservative and retention shall conform to AWPA Standard C29.

* 5.2.1.2 Open and platform type bodies. Wood parts used on open and platform type bodies shall be pressure treated with chromated copper arsenate conforming to type C of AWPA Standard P5. Treatment and retention shall conform to AWPA Standard C1.

5.2.2 Plywood parts.

5.2.2.1 Closed type bodies. Plywood parts used on closed type bodies (see 5.2.1.1), shall be pressure treated with solubilized copper-8-quinolinolate conforming to AWPA Standard C29. Treatment and penetration shall conform to AWPA Standard C9.

5.2.2.2 Open and platform type bodies. Plywood parts used on open and platform type shall be pressure treated with chromated copper arsenate conforming to type C of AWPA Standard P5. Treatment and penetration shall conform to AWPA Standard C9.

5.2.3 Paintability. A prime coat is not required, and treated wood shall present a completely paintable surface when painting is required. (see 5.1, last sentence).

Check the source to verify that this is the current version before use.

5.3 Rustproofing. When rustproofing is required by specifications or other procurement documents, the vehicle shall be rustproofed in accordance with FED-STD-297.

* 5.4 Identification markings for Army and Army National Guard vehicles. Side markings for Army and Army National Guard nontactical vehicles shall not be applied. Except for trailers, semitrailers and dollies, single, rear window or rear bumper markings containing the service identification "U.S. ARMY" or "ARMY NATIONAL GUARD" and the legend "FOR OFFICIAL USE ONLY" shall be applied. Front and rear license plate markings are required on all vehicles (see 5.5.1.2(a) and 5.5.1.3). The markings shall not be obscured by the truck body, spare tire, spare tire carrier, or any other accessory or part of the vehicle. The markings shall not be applied to mounted equipment on the vehicle without the prior approval of the procuring activity.

* 5.4.1 Rear window or bumper markings. Marking style and arrangement of the rear window or rear bumper markings shall be as shown in figures 1 and 3. When space dictates, the markings may be on a single line. The service identification, "U.S. ARMY" OR "ARMY NATIONAL GUARD" shall be in letters 1 inch in height. The legend "FOR OFFICIAL USE ONLY" shall be in letters 1/2 inch in height. Space between lines shall be 1/2 inch.

* 5.4.2 Location of rear window or bumper markings. On Army and Army National Guard vehicles with rear windows visible from the exterior of the vehicle (passenger cars, station wagons, ambulances, some trucks, truck tractors, buses and utility vehicles) the markings shall be affixed to the interior of the rear window (adhesive faced markings), on the lower right hand side, except for vehicles with rear window electric defrosters, the markings shall be applied to the exterior of the window (adhesive on back). For vehicles without a rear window or when the rear window is blocked from exterior view, or where window markings would interfere with rear vision (small rear windows), the markings shall be affixed (adhesive on back) to the rear bumper, in the center or, if the center is not usable, on the right hand side. Vehicles without a visible rear window and without a rear bumper shall have the markings applied anywhere on the center of the rear of the vehicle.

* 5.5 Identification markings, other services. The identification markings applied to vehicles within the scope of this standard, except for Army and Army National Guard vehicles (see 5.4), shall consist of the departmental or agency identification, "US NAVY," "US AIR FORCE," "US MARINE CORPS," "DEFENSE LOGISTICS AGENCY," and "DEPARTMENT OF DEFENSE," whichever is applicable; the military registration number

Check the source to verify that this is the current version before use.

assigned; and the legend "FOR OFFICIAL USE ONLY." Except as otherwise specified herein, markings shall be applied on both sides and on the rear of each vehicle in a location to be readily visible. The rear markings shall not be obscured by the spare tire, spare tire carrier, or any other accessory or part of the vehicle. Registration markings shall not be applied to mounted equipment on vehicles without the prior approval of the procuring activity. Marking style, size, and spacing shall be as shown in figures 1, 2 and 3. The several elements of the registration markings shall be arranged on both sides and the rear as follows:

a. Side markings shall consist of the departmental or agency identification on the top line (top two lines for Department of Defense), the military registration number on the next line, and the legend on the bottom line. Each line shall have a common centerline to provide the arrangement illustrated in figures 3 through 9. When space does not permit "DEPARTMENT OF DEFENSE" to be applied on two lines, one line may be used as shown in figure 10.
b. Rear markings shall consist of the departmental or agency identification and the military registration number. The legend shall not be included at the rear of the vehicle.

5.5.1 Marking locations. Markings shall be located as specified herein; however, where obstructions exist, or where configuration of body or cab interferes with legibility, the markings shall be relocated with the approval of the procuring activity.

5.5.1.1 Sides of vehicles.

a. Passenger car, station wagon, ambulance, truck, truck chassis and truck tractor markings shall be centered on each front door or in a comparable position in relation to the driver's seat on vehicles with sliding doors or without doors (see figures 12 through 17).
b. Bus markings shall be applied on the panels, just below the windows, to the rear of the entrance door on one side, and to the rear of the driver's compartment on the other side (see figure 19).

Source: https://assist.dla.mil -- Downloaded: 202640-26T07:42Z
Check the source to verify that this is the current version before use.

c. Trailer and semitrailer markings shall be centered vertically on each side of the front quarter of the vehicle (see figures 21 and 22).
d. Semitrailer converter dolly markings shall be applied on each side, on the most appropriate surface consistent with good visibility.
e. Solo motorcycle marking shall be located on both sides of the fuel tank. Markings on motorcycles with sidecars shall be centered vertically on the door or outside panel of the vehicle.
f. Motor scooter markings shall be located on both sides of the package compartment or other appropriate surface.

5.5.1.2 Rear of vehicle.

a. Army, Army National Guard and Defense Logistics Agency. Marking on the rear of Army, Army National Guard, and Defense Logistics Agency vehicles shall be accomplished by use of a plate bolted to the rear license plate bracket. The identification plate and bracket shall be furnished by the manufacturer. The department or agency identification "U S Army", "ARNG", "DLA", as applicable, and the military registration number shall be applied as shown in figure 4. Typical Army and DLA rear markings are shown in figures 11, 16, 18, 20 and 23. The plate shall conform to one of the following:
(1) A .060-.075 inch thick aluminum plate 6 inches in height, 12 inches in width. The marking background material covering the front of the plate shall conform to type I, class 1, 2 or 3, reflectivity 1 white of L-S-300.
(2) A .027-.032 inch thick aluminum embossed plate 6 inches in height, 12 inches in width. The face of the license plate shall be fully treated with a reflectorized coating that shall provide a minimum reflective brightness of five candlepower per foot candle per license plate for a period of five years. The reflectorized coating shall function as an effective and dependable safety warning device and shall improve the legibility of the license plate for law enforcement purposes.

Check the source to verify that this is the current version before use.

b. Air Force, Navy and Marine Corps. The departmental or agency identification and military registration number shall be arranged on one line in such location as to be readily identifiable from the rear.

c. Department of Defense. The departmental identification and military registration number shall be arranged on three lines in such a location as to be readily identifiable from the rear. When space does not permit rear markings to be applied on three lines, one or two lines may be used.

d. Motorcycles, scooters and snowmobiles. Plates furnished on motorcycles, scooters and snowmobiles may be reduced in size as appropriate to conform to the normal practice for license plates for these types of vehicles.

5.5.1.3 Front of vehicle. For Army, Army National Guard, and Defense Logistics Agency self-propelled vehicles, the markings and plate specified in 5.4.1.2.a for the rear of the vehicle shall also be furnished on the front of the vehicle. The plate shall be bolted to the front license plate bracket or bumper recess.

5.5.2 Marking material. Except as otherwise specified herein, markings shall be applied using die cut, previously spaced, individual letters and numbers applied directly to the vehicle. Reflectorized marking shall be applied using reflectorized tape conforming to type I, class 1 or 3, reflectivity 1 of L-S-300 for all colors except black. Reflectorized black color shall be applied using reflectorized tape meeting the performance requirements of type I, class 1 or 3, reflectivity 1 of L-S-300 and possessing a minimum reflectivity of 10 candle power per foot-candle per square foot at 0.2-degree divergence and minus 4-degree incidence angles. Nonreflectorized marking shall be applied using material conforming to types I or II, class 1 of MIL-M-43719.

5.5.3 Marking colors. Colors of markings shall be as specified herein for the appropriate military service or agency, vehicle color, and vehicle type. Reflective colors shall be as classified in L-S-300. Painted and elastomeric material colors shall conform to FED-STD-595.

* 5.5.3.1 Army and Army National Guard marking colors. The manufacturer's standard gloss white shall be used on the rear window markings. Gloss white markings shall be used on chrome and dark colored bumpers. Gloss black No. 17038 markings shall be used on light colored

Check the source to verify that this is the current version before use.

bumpers. Borderline decisions between white on dark bumpers and black on light bumpers shall be the manufacturer's, with white generally preferred. Gloss black color No. 17038 numberals and letters on a reflective white background shall be used on the front and rear marking plates.

5.5.3.2 Navy marking colors.

a. Reflective blue markings shall be used on vehicles painted gloss white.
b. Reflective black markings shall be used on vehicles painted gloss yellow, gloss green and gloss red.
c. Reflective white markings shall be used on vehicles painted gloss black and gloss blue.

5.5.3.3 Air Force marking colors.

a. Reflective yellow numerals and letters shall be used on vehicles painted blue.
b. Reflective black numerals and letters shall be used on ambulances painted white. Reflective yellow numerals and letters on a blue background shall be used on all other vehicles painted white.
c. Reflective white numerals and letters on a red background shall be used on vehicles painted red or yellow.
d. Lusterless black color No. 37038 markings shall be used on vehicles painted semigloss green color No. 24052.

5.5.3.4 Marine Corps marking colors.

a. Reflective black markings shall be used on vehicles painted gloss white or gloss yellow.
b. Reflective yellow markings shall be used on vehicles painted standard Marine Corps gloss green or gloss red.
c. Reflective gold markings shall be used on special purpose vehicles when authorized by Marine Corps directive.

5.5.3.5 Defense Logistics Agency marking colors. Marking color(s) for the applicable vehicle exterior color for the Defense Logistics Agency shall be the same as specified in 5.5.3.2 for the Navy.

5.5.3.6 Department of Defense marking colors. Marking color(s) for the applicable vehicle exterior color for the Department of Defense shall be the same as specified in 5.5.3.1 for the Army and Army National Guard.

5.6 Data plates. A name plate, a parts data plate or label, and instruction plates shall be installed on each vehicle.

5.6.1 Name plate. The information required for the name plate shall be inscribed or stamped in such a manner that the legend will be discernable if inadvertently painted over. Metal plates shall be of non-ferrous material. Plastic or non-metallic plates shall be approximately 1/32-inch thick. The name plate shall include at least the information shown in a or b below, except: (1) Gross combination weight rating is required only on truck tractors (2) Vehicle curb weight, payload and gross weight rating are not required on sedans and station wagons; and (3) Vehicle curb weight is not required on trucks of 10,000 pounds gross vehicle weight or less.

a. All vehicles, except cab and chassis models:

Nomenclature: (as applicable to the type of vehicle specified in the contract.)

Make and model:
Manufacturer's serial number:
Registration number:
NSN Number:
Vehicle curb weight: _____ pounds.
Payload, maximum: _____ pounds.
Gross vehicle weight rating, max. _____ pounds.
Gross combination weight rating, max. _____ pounds.
1/ Date of delivery: (month and year)
Warranty: _____ mo. _____ miles.
Contract number:
US Property

b. Cab and chassis models only:

Make and model:
Manufacturer's serial number:
Registration No.:
Gross vehicle weight rating, max: _____ pounds.
1/ Date of delivery: (month and year)
Warranty: _____ mo. _____ miles.
Contract number:

1/ (Date of delivery shall be left blank until the vehicle is accepted by the Government inspector. Date of delivery shall be not prior to date of acceptance indicated on form DD 250.)

Check the source to verify that this is the current version before use.

5.6.2 Parts data plate or label. The manufacturer's standard parts data plate or label shall be provided and mounted at the driver's compartment or under the hood of all trucks, truck ambulances, and buses. Labels shall be laminated or of such composition as to prevent deterioration. The data plate or label shall list the applicable vehicle model number and the manufacturer's part code number for at least the clutch, transmission, transfer case, front and rear axles, and the differentials for front, rear, and intermediate axles. The plate or label shall include information required for any of the manufacturer's warehouse or dealer service points to identify and provide the required service parts.

5.6.3 Data plate mounting. Instruction plates pertaining to mounted equipment shall be mounted adjacent to the equipment controls. Plates inscribed with the shifting pattern, for vehicles having more than 3 forward speeds, shall be mounted in a location clearly visible to the driver; the manufacturer's instruction plate is acceptable and may be incorporated in the gear shift lever knob at the manufacturer's option. Unless concealed or temporary markings are specified, name plates shall be mounted on or adjacent to the vehicle instrument panel in a position that does not conflict with the glare limitations of Federal Motor Vehicle Safety Standard No. 107, in the engine compartment in a readable location or on the front right corner of the trailer, as applicable. When concealed markings are specified for self-propelled vehicles, the nameplate shall be mounted on the underside of the rear trunk lid, or if not so equipped, on another concealed but readily accessible interior surface, such as the inside of the map compartment lid.
