MIL-S-19500/267(EL)
AMENDMENT-2
17 January 1966
SUPERSEDING
AMENDMENT-1
23 October 1963

MILITARY SPECIFICATION

TRANSISTOR, PNP, GERMANIUM
TYPE 2N987

This Amendment forms a part of Military Specification MIL-S-19500/267(EL), 13 May 1963.

Page 3, paragraphs 3.5 and 3.5.1: Replace with the following:

"3.5 Marking. - Marking shall be in accordance with Specification MIL-S-19500. If any specification waiver has been granted, the product-identification marking shall consist of the 'classification' type designation only. The 'manufacturer's identification' and 'country of origin' may, at option of the manufacturer, be omitted from being marked on the semiconductor device covered herein."

Page 6, Table I, Subgroup 2, Available Power Gain test: In the Conditions column, replace "Test current per Fig. 3 herein" with: "Test circuit per Fig. 3 herein."

Page 10, Table II, Subgroup 7, Steady State Operation Life test: In Conditions column, replace "V_{CB} = -10 Vdc" with: "V_{CB} = -6.5 Vdc."

Page 14, Figure 3: Replace with new Figure 3, attached.

Check the source to verify that this is the current version before use.

$$\text{Available Power Gain} = \left(\frac{V_o}{V_1}\right)^2 \frac{4\,R_s}{R_L}$$

R1 = 10 kohm
R_s = 60 ohm
R is chosen such that the total impedance RL of the tuned circuit II equals 3.3 kohm

C_1 = 1500 uuf
C_2 = 820 uuf
C_3 = 5-25 uuf var.
C_4 = 2-10 uuf var.
C_5 = 220 uuf
C_6 = 820 uuf

L_1 = 0.18 uH
L_2 = 0.18 uH
L_3 = ferrite bead

Figure 3. Available Power Gain test circuit.
