COMMERCIAL ITEM DESCRIPTION

GLASS CLEANER (LIQUID)

The General Services Administration has authorized the use of this commercial item description, for all federal agencies.

1. Scope. This commercial item description covers ready-to-use regular and antifogging liquid glass cleaner for cleaning and polishing of glass surfaces, plastics, ceramics, chrome, painted surfaces, and stainless steel.

2. Types: The glass cleaner shall be of the following types:

Type I	- Regular
Type II	- Antifogging

3. Salient Characteristics:

3.1 Flammability. The glass cleaner shall not be flammable. When used as directed on the label, the glass cleaners shall not be toxic as defined in the Federal Hazardous Substances Act Regulations (16 CFR 1500.3(6)(5).

3.2 Flash point. The flash point of the glass cleaners shall be not less than 49^0C (120^0F) when tested as specified in ASTM D 56.

3.3 pH. The pH of a 1 percent solution of the ready to use glass cleaner in distilled water shall be not less than 6.5 nor more than 11.0 when tested as specified in ASTM E 70.

3.4 Cleaning performance. When tested by CSMA Test Method DDC-09 for Glass Cleaners, the glass cleaner shall be equal or better in performance than the reference glass cleaner in cleaning, streaking and smearing.

Reference glass cleaner

Ingredient	Weight percent
isopropanol	4.0
dipropylene glycol monomethyl ether	4.0
ammonium hydroxide (28% in water)	1.0
Pluronic F 108	0.1
distilled water	90.0

Beneficial comments, recommendations, additions, deletions, clarification, etc., and any data which may improve this document, should be sent to: GSA, Paints and Chemicals Center, 400 15th Street, S.W., Auburn, WA 98001.

3.5 Antifogging performance. Type II glass cleaner shall prevent steam condensation on a glass mirror when tested as follows: Take a glass mirror at least 15.2 cm (6 inches) by 30.5 cm (12 inches) and clean it with cheesecloth in solvent baths in the following order:
a) mineral spirits (naptha)
b) dipropylene glycol monomethyl ether
c) isopropanol and
d) water.
After the water rinse, dry the glass mirror with cheesecloth. To insure complete cleanliness of the mirror, expose it to live steam. A white highly reflective appearance is taken on by the glass in those areas not thoroughly clean. (If not completely clean, the mirror should be exposed to the entire solvent cleaning procedure again.) Drape one-half of the mirror with a towel and apply the glass cleaner to the other half of the mirror. Wipe until the surface is just damp and then let dry. Hold the mirror 15.2 cm (6 inches) above the steam source and move the mirror back and forth in order to get an even distribution of the steam. The side treated with the glass cleaner shall show no steam condensation when compared to the untreated side.

4. Product Conformance. The products provided shall meet the salient characteristics of this commercial item description, conform to the producer's own drawings, specifications, standards, and quality assurance practices and be the same product offered for sale in the commercial market. The Government reserves the right to require proof of such conformance.

5. Notes.

5.1 The contractor may use his normal quality assurance procedures for manufacture of this product; however, should a disagreement arise between the Government and its customer or between the Government and the manufacturer concerning compliance to the salient characteristics of this commercial item description, the test methods and tests stated in this commercial item description will be used to determine compliance of the product.

5.2 CSMA methods are available from the Chemical Specialties Manufacturers Association, Incorporated, Attn: Member Services Dept., 1913 Eye Street, NW, Washington, DC, 20006.

5.3 ASTM standards are available from the American Society for Testing and Materials, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959.
