COMMERCIAL ITEM DESCRIPTION

SHAKING MACHINE, TESTING SIEVE, LABORATORY, PORTABLE, HAND-OPERATED, CAPACITY 6 FULL-HEIGHT OR 13 HALF-HEIGHT, 8-INCH STANDARD SIEVES

The General Services Administration has authorized the use of this commercial item description in preference to Military Specification MIL-S-11578.

This description covers a hand-operated, portable shaking machine as shown on figures 1 and 2, including cover and pan, but not sieves, intended to be used for determination of grain-size distribution of a soil.

Salient characteristics.

Material. Aluminum, cast, iron or corrosion-resistant steel.

Design. The shaking machine shall consist of a sieve carriage and support, oscillating mechanism and a base.

Weight. The shaking machine shall not exceed 42 lbs. in weight.

Sieve carriage and support. The sieve carriage and support shall be removable for disassembly. The carriage shall hold from one to not less than six full-height or from one to not less than 13 half-height 8-inch (203.2 mm) sieves conforming to ASTM E 11.

Oscillating mechanism. The oscillating mechanism shall operate through a hand-cranked gear or belt-driven flywheel. The sieve platform shall move in an eccentric orbit and shall receive not less than two or not more than eight impacts during each orbit. The sieve carriage shall make one complete oscillation for each revolution of the flywheel. The hand crank shall not require more than 20 pounds turning force.

Base. The base shall be cast iron or the same material as the carriage and shall provide rigid support for the oscillating mechanism and the sieve carriage support.

Lubrication. All surfaces that require it shall be provided with a means for lubricating.

Regulatory requirements. The offeror/contractor is encouraged to use recovered materials in accordance with Public Law 94-580 to the maximum extent practical.

AMSC N/A FSC 6635

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Packaging and marking. Military packaging shall be specified when shipments are to overseas Department of Defense (DoD) consignees. Commercial packaging may be specified for shipments to DoD consignees within the Continental United States and to non-DoD consignees worldwide. When a supplier's normal packaging will satisfy the requirements for military packaging, it may be used.

Military packaging. Each shaking machine shall be preserved and packed to protect against physical damage and deterioration in a logistic environment characterized by the following:

1. Multiple handling during transportation and in-transit storage.
2. Shock, vibration and static loading forces during worldwide shipment by all transport modes.
3. Uncontrolled warehouse storage for extended periods.
4. Weather exposure during shipment and in-transit transfers.
5. Stacking loads during shipment and storage.

Quantities of shaking machines destined to a single addresses may be unitized into one or more unit loads.

Commercial. Each shaking machine shall be packaged in accordance with the supplier's normal method for retail distribution. Individually packaged shaking machines shipped to a single destination may be unitized to permit handling as a single unit. Shipping containers shall comply with Uniform Freight Classification or National Motor Freight Classification rules.

Marking. Unit, intermediate (when provided), and exterior packs shall be marked with the item nomenclature, National Stock Number or part number, quantity per pack, and contract number as a minimum: additional marking shall be as specified in the contract or order. Exterior packs shall have in addition the complete consignee's address. Markings shall be applied in a legible manner, in a contrasting color, of an appropriate size, and of waterproof materials.

Quality assurance. The shaking machines shall be examined for the following defects. Presence of one or more defects shall be cause for rejection.

1. Materials not as specified.
2. Not removable for disassembly as specified.
3. Does not operate as specified.
4. Not lubricated as specified.
5. Pan and cover not as specified.
6. Packaging and marking not as specified.

Certification of commercial item. The contractor shall certify that the product offered to the Government meets the salient characteristics of this description and that the product conforms to the producer's own drawings, specifications, standards, and quality assurance practices and is the same product as the manufacturer's current product offered by the contractor in the commercial market place for at least one year preceding the solicitation. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

Small business. A small business that cannot meet the certification-of commercial-item requirement of this document, may make an offer under this solicitation; and, if such small business is the apparent successful offeror, the Government may require the small business to submit a sample shaking machine. Any such hand operated shaking machine may be evaluated for this solicitation if time to contract award permits. Such evaluation would be to determine conformance to all requirements of this commercial item description and to determine equivalency to hand operates shaking machine available in the commercial market-place in the areas of durability, human factors engineering and safety. It should be noted that bid samples are not required unless specifically requested by the contracting officer. Note. The Government may elect not to evaluate a bid sample from an apparent low bidder for award for this solicitation if a determination of urgency is made by the contracting officer. The bid sample would then be evaluated prior to future solicitation for comparable items.

Notes:

1. Figures 1 and 2 are included for illustration only and are not intended to preclude the furnishing of other shaking machines which conform to this description.
2. When this commercial item description is used for procurement, the item certification clause must appear in the solicitation.
3. ASTM E 11 is available from the American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.
