COMMERCIAL ITEM DESCRIPTION

T-SQUARES (METAL, WOOD, AND PLASTIC)

The General Services Administration has authorized the use of this commercial item description in preference to Military Specification MIL-T-10629.

This description covers wood and plastic T-squares used in general drafting practice and layout work and allows for ordering of a metal construction where a heavy and rigid T-square is desired.

Salient characteristics:

Design. The T-squares shall consist of a head and a blade.

Type I - fixed head

Sizes - 18-, 24-, 30-, 36-, and 42-inches long (457.2-, 609.6-, 762.0-, 914.4-, and 1066.8- mm long)

Type II - protractor head

Sizes - 24- and 42-inches long (609.6- and 1066.8-mm long).

Material. The T-square head and blade shall be constructed of wood, plastic, or metal as specified herein. If a metal construction is ordered for the T-square head, the metal shall be an aluminum or zinc alloy, and the locking device for the type II T-square head shall be corrosion-resistant steel. If a metal construction is ordered for the blade, the blade shall be of corrosion-resistant steel or steel processed to prevent corrosion.

Blades. The ruling edges of the blades shall be parallel to each other, and shall be straight. A 3/8- to 1/2-inch diameter hole (9.525- to 12.7-mm) shall be centered near the free end of the blade to permit hanging the T-square. Blades for T-squares shall be between 1-1/4- and 2-inches wide (31.75 and 50.8 mm), and 0.042 and 0.100 inch thick (1.067 and 2.54 mm).

Heads. The head shall be of either solid or openwork design, and shall be so weighted as to give proper balance when handled. The working edge shall be a smooth surface. The length of the heads for the 18- and 24-inch T-squares (457.2- and 609.6-mm) shall be not less than 10 inches (254.0 mm), and the length for the 30-, 36-, and 42-inch T-squares (762.0-, 914.4-, and 1066.8-mm) shall be not less than 12 inches (304.8 mm).

AMSC N/A FSC 6675

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Type I, fixed head. The working edge of the head and the blade shall be permanently fastened together at a 90 degree angle to each other.

Type II, protractor head. The head shall be fastened to the blade by a pivot which permits the head to pivot at least 80 degrees from either side of zero setting. Zero setting shall be when the blade is at a 90 degree angle to the head. Graduations shall be at every degree of arc and shall have a vernier scale to permit readings to 5 minutes of arc. At least each 10 degree of arc shall be numbered. A locking device shall be provided to lock the head positively in any position.

Graduations and numbering. Graduations and numbering shall be indented into the protractor head and shall be filled with a permanent readily visible material.

Regulatory requirements. The offeror/contractor is encouraged to use recovered materials in accordance with Public Law 94-580 to the maximum extent practicable.

Packaging and marking. Military packaging shall be specified when shipments are to overseas Department of Defense (DoD) consignees. Commercial packaging may be specified for shipments to DoD consignees within the Continental United States and to non-DOD consignees worldwide. When a supplier's normal packaging will satisfy the requirements for military packaging, it may be used.

Military packaging. Each T-square shall be preserved and packed to protect against physical damage and deterioration in a logistic environment characterized by the following:

1. Multiple handling during transportation and intransit storage.
2. Shock, vibration, and static loading forces during worldwide shipment by all transport modes.
3. Uncontrolled warehouse storage for extended periods.
4. Weather exposure during shipment and intansit transfers.
5. Stacking loads during shipment and storage.

Quantities of T-squares of like description destined to a single addressee may be unitized into one or more unit loads.

Commericial. Each T-square shall be packaged in accordance with the supplier's normal method for retail distribution. Individually packaged T-squares of like description shipped to a single destination may be unitized to permit handling as a single unit. Shipping containers shall comply with Uniform Freight Classification or National Motor Freight Classification rules.

Marking. Unit, intermediate (when provided), and exterior packs shall be marked with the item nomenclature, National Stock Number (NSN) or part number if no NSN has been designated, quantity per pack, and contract number as a minimum; additional marking shall be as specified in the contract or order. Exterior

packs shall have in addition the complete consignee's address. Markings shall be applied in a legible manner, in a contrasting color, of an appropriate size, and of waterproof materials.

Quality assurance. The T-square shall be examined for the following defects. Presence of one or more defects shall be cause for rejection.

1. Type and size not as specified.
2. Material not as specified.
3. Dimensions not as specifed.
4. Protractor head does not operate as specified.
5. Graduations and numbering not as specified.
6. Packaging and marking not as specified.

Certification of commercial item. The contractor shall certify that the product offered to the Government meets the salient characteristics of this description and that the product conforms to the producer's own drawings, specifications, standards, and quality assurance practices and is the same product as the manufacturer's current product offered by the contractor in the commercial marketplace for at least one year preceding the solicitation. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

Small business. A small business that cannot meet the certification-of-commercial-item requirement of this document, may make an offer under this solicitation; and, if such small business is the apparent successful offeror, the Government may require the small business to submit a sample T-square. Any such T-squares may be evaluated for this solicitation if time to contract award permits. Such evaluation would be to determine conformance to all requirements of this commercial item description and to determine equivalency to T-squares available in the commercial marketplace in the areas of durability, human factors engineering, and safety. It should be noted that bid samples are not required unless specifically requested by the contracting officer. Note. The Government may elect not to evaluate a bid sample from an apparent low bidder for award for this solicitation if a determination of urgency is made by the contracting officer. The bid sample would then be evaluated prior to future solicitation for comparable items.

Check the source to verify that this is the current version before use.

Notes:

1. Ordering activity shall specify type and size of T-square required, and shall specify material for construction of T-square head and material for construction of T-square blade, separately.
2. When this commercial item description is used for procurement, the commercial item certification clause must appear in the solicitation.
