DEPARTMENT OF DEFENSE
Washington DC 20360-5110

Specifications and Standards of Non-Government Organizations Released for Flight Vehicle Design and Construction.

MILITARY BULLETIN 147D

1. This Military Bulletin is approved for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commanding Officer, Naval Air Engineering Center, ATTN: Systems Engineering and Standardization Department (SESD) Code 53, Lakehurst, NJ 08733-5100, by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter (see 4.2).

FOREWORD

This document is published under the designation, Military Bulletin. The industry documents listed in the appendix to this document have been approved for the use listed in the scope by the Army, Air Force and Navy. Only those documents have been included for which there are no limitations or for which there is agreement on the limitations by all three military services.

1. SCOPE

1.1 Purpose. This bulletin lists non-Government specifications and standards approved as indicated for use in new design of structure, airframe, and related fluid systems on aerospace vehicles.

1.2 Application. The specifications and standards listed in this bulletin are in the category of "special lists" as provided for in MIL-STD-970.

1.3 Limitations. The approval of the non-Government documents is subject to the limitations listed for each. The approval noted in 1.1 does not apply to the use of the listed documents for electrical, electronic, power plant, instrument, survival, or ground support systems, of aerospace vehicles.

1.3.1 This bulletin approves industry documents for use in new design only, in accordance with the scope as specified herein. It is not the purpose to list documents for only logistic or acquisition purposes.

2. REFERENCED DOCUMENTS

2.1 Government documents.

2.1.1 Specifications, standards, and handbooks. Unless otherwise specified, the following specifications, standards, and handbooks of the issue listed in the current Department of Defense Index of Specifications and Standards (DODISS) and the supplement thereto (if applicable), form a part of this standard to the extent specified herein.

STANDARDS

MILITARY

MIL-STD-970 - Standards and Specifications, Order of Preference for the Selection of

(When requesting applicable documents, refer to both title and number. Copies of unclassified documents may be obtained from the Commanding Officer, Naval Publications and Forms Center, 5801 Tabor Avenue, Philadelphia, PA 19120-5099. Request for copies of classified documents should be addressed to the Naval Publications and Forms Center, via the cognizant Government representative.)

2.2 Other publications. The following documents form a part of this bulletin to the extent specified herein. The issues of the documents which are indicated as DOD adopted shall be the issues listed in the current DODISS and the supplement thereto, if applicable.

AEROSPACE INDUSTRIES ASSOCIATION OF AMERICA, INC.
NATIONAL AEROSPACE STANDARDS - listed herein

SOCIETY OF AUTOMOTIVE ENGINEERS, INC.
AEROSPACE STANDARDS - listed herein

(Copies of acceptance notices for the non-governmental documents listed herein may be obtained from the Commanding Officer, Naval Publications and Forms Center, 5801 Tabor Avenue, Philadelphia, PA 19120-5099.)

Industry association specifications and standards are generally available for reference from libraries They are also distributed among technical groups and using federal agencies.

Check the source to verify that this is the current version before use.

3. DEFINITIONS

3.1 Engineering document. An engineering document is a specification, standard, specification sheet, drawing, etc, that is used for a statement of requirement for system engineering, standardization, design, construction, maintenance, and logistic support of flight vehicle systems.

3.2 Substitute engineering document. A substitute engineering document is a document which can functionally perform in place of another engineering document in all possible applications. However, the other engineering document cannot be used in place of the substitute document in all possible applications because of quantitative and qualitative differences.

3.3 Superseding engineering document. A superseding engineering document is applicable to new and future design contracts. The superseded document is not applicable to new or future design contracts. A superseding document is not necessarily a substitute document. Its requirements are not necessarily substitutive as a statement of contractual requirements.

3.4 Acceptance notice. Acceptance notices, for the documents listed herein, are documents which indicate government approval of the industry documents for use by the Department of Defense, and for listing in the Department of Defense Index of Specifications and Standards (DODISS). Any specific exceptions to the acceptance are stated on the acceptance notice.

3.5 Substitute item. A substitute item has that functional performance capability and geometrical shape limits which enables it to be used in place of another item, functionally and dimensionally, in all possible applications. However, the other item cannot be used in place of the one item in all possible applications because of quantitative or qualitative differences in descriptive factors.

3.6 Replacement item. A replacement item has that functional capability which enables it to be used, without exception, functionally, in place of another item in all possible applications; but because of differences in geometrical shape limits from the original item, its use requires alterations of the item or of the items with which it is used in conjunction.

Check the source to verify that this is the current version before use.

4. GENERAL STATEMENTS OF REQUIREMENTS

4.1 Document issue restriction. Revisions of documents listed herein, having a date later than the issue listed, are not to be used unless specifically approved through contract channels.

4.2 Procedure for listing additional industry documents. The present listing is not intended to be complete. Industry groups desiring to have engineering documents, or revisions to presently listed documents, added to the bulletin shall submit copies of the document, for approval to the Commanding Officer, Naval Air Engineering Center, ATTN: Systems Engineering and Standardization Department (SESD) Code 53, Lakehurst, NJ 08733-5100, with the following information:

a. Engineering documents (see 4.2.1).
b. Revisions to presently listed documents (see 4.2.2).

4.2.1 Engineering documents. For each engineering document requested or proposed to be listed in this bulletin, the following information, with a copy of the document, shall be provided.

4.2.1.1 What recurring engineering design, construction, or maintenance problem does the document solve?

4.2.1.2 Why can this recurring problem not be solved by documents listed herein or other approved documents?

4.2.1.3 How will recurring engineering or design problems pertain to new future design?

4.2.1.4 What presently approved or used documents could the proposed document supersede?

4.2.1.5 What presently approved or used documents could the proposed document be used as a substitute or replacement document for?

4.2.2 Revisions to presently listed documents. For each revision of the documents listed herein that are proposed for listing, the following information, with a copy of the document, shall be provided.

4.2.2.1 What is the specific difference between the revision proposed for listing and the accepted revision of the document presently listed?

4.2.2.2 What is the engineering, design, construction, or maintenance need that each difference between revisions will fulfill?

5. DETAILED STATEMENTS OF REQUIREMENTS

Not applicable

6. NOTES

6.1 Intended use.

6.2 Supersession. This Military Bulletin supersedes Military Bulletin 147D. The NAS (National Aerospace Standard) documents and the AS (Aerospace Standard) documents presently acceptable for use in the systems listed in the Scope of this specification (1.) have been included in this Military Bulletin and are listed in the DODISS.

6.3 The margins of this standard are marked with vertical lines to indicate where significant changes from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document*(s)* or to amend contractual requirements.
