MATERIAL: The bath shall be made of all stainless steel in accordance with ASTM Specification A167.

DESIGN: The bath shall have a built-in compressor for providing mechanical refrigeration and maintaining constant temperature for cooling. The bath shall operate from -15 to 100°C with a temperature uniformity of ±0.2°C and shall include the following equipment, a stainless steel pump, heater, circulating coils and bath reservoir. Also included is a single dial control to adjust the temperature and a reading thermometer with the range of -30 to 71°C. The overall dimensions shall be 406 mm wide x 568 mm deep x 597 mm high.

Specifications are as follows:

Cooling time (min/temp): 70/-15°C
Heater wattage: 1000
Pumping capacity (zero head): 8 Lpm
Maximum head: 1.5 m
Heat removal capacity
BTU/h @ evap temp °C: 1650 @ 20°C, 1200 @ 0°C
(watts) (483.45 @ 20°C, 351.6 @ 0°C)
Reservoir capacity: 20 L
Type of pump: Pressure
Top opening for liquid: 300 mm W x 34 mm D
Immersion depth: 140 mm
Compressor, HP (W): .25 (186.5)
Refrigerant (freon): F12
Power required: 115V, 60Hz, 1250W

All electrical components shall conform to the standards of Underwriters Laboratories, Incorporated.

NOTE: Items differing from this Military Standard by minor variations in design or dimensions are considered standard under this document, provided such variations do not affect performance and are not in conflict with the material requirements specified herein.

APPROVED 30 JUN 1983 REVISED

This military standard is approved for use by all Departments and Agencies of the Department of Defense. Selection for all new engineering and design applications and for repetitive use shall be made from this document.
