COMMERCIAL ITEM DESCRIPTION

CASE, FIELD, FIRST AID DRESSING, LEATHER (MILITARY POLICE)

The General Services Administration has authorized the use of this Commercial Item Description in preference to MIL-C-1002.

Abstract. The first aid field case is intended for use by members of the Military Police of the U. S. Army and Air Force. The case is a leather pocket enclosure with snap fastener. It is worn on a belt. The case is designed to hold a Dressing, First Aid, Individual Troop, Camouflage (First Aid Packet).

Classification. The field case is provided in one type and size.

Salient Characteristics. The Case, First Aid Dressing shall be of two piece leather pocket construction capable of belt attachment, and an overlapping flap. In a fully extended, open configuration, the case shall measure 6 1/4 inches high, by 5 ±1/16 inches long. The flap shall have a snap closure. The main body of the pocket shall form the back, being contiguous with the flap. The sewn-on pocket portion shall be molded to the back portion, creating a cavity for intended contents. Stitching around body shall be 3/16 inch from edge. The main body, back portion, shall be perforated with two slots, 1/8 inch each, centered three inches apart, and 2 inches high.

The case, including flap shall be shaped and dimensioned as indicated in Figure 1.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Defense Personnel Support Center, Clothing and Textiles Directorate, Attn: DPSC-FSSD, 2800 South 20th Street, Philadelphia, PA 19101-8419, by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

Check the source to verify that this is the current version before use.

Stitched double edges of body and flap edge shall be sealed with a colorless aqueous solution similar to gum tragacanth and smoothly burnished. All stitching shall be lock-stitch, type 301, 4-6 stitches per inch.

Materials

Leather: The leather shall conform to any type of mildew resistant treated cattlehide leather conforming to the provisions of KK-L-271. The leather shall be dyed black and finished smoothly on the grain side with a long-lasting lustrous finish. The finished grain side shall be used for all visible facings. The body portion contiguous to the flap shall be 6/64 inches thick, and the remaining front portion, 4/64 inches thick.

Thread: The thread shall be twisted soft or bonded multiple cord, normal elongation, 3 ply general purpose polyester with a minimum breaking strength of 24 pounds. The color shall be black and exhibit colorfastness to weathering in compliance with conventional commercial practice.

Ends of stitching shall be backstitched or over-stitched not less than 1 inch, except where ends are turned under, or caught in other seams and stitching.

Fastener, snap: Snap fasteners shall be steel, with black finish consisting of size 2 button with socket for the female half, and size 2 eyelet with stud for the male half. The button/socket assembly shall be conventional, commercial spring clamp type.

Sizes and lengths. The finished case shall conform to the dimensions indicated in the above description, and Figure 1.

Label/marking. The epithet "U.S." and contractor logo, or trademark, shall be permanently and legibly indented on the back of the case, in accordance with instructions provided in Figure 1.

Label/Tag. Each item shall be individually bar-coded with the type VIII, class 17 label/tag of DDD-L-20. This label/tag shall be located so that it is completely visible on each item and causes no damage to the item.

Workmanship. After completion, the finished case shall be in compliance with configuration, construction, components, and finish as stated in this description. The case shall be complete and capable of holding the First Aid Packet. Snap fasteners shall be properly seated, and clinched assuring flawless opening and closing of case.

Check the source to verify that this is the current version before use.

Thread tension shall be uniformly secure, with thread ends tied and fused.

The finished case shall be thoroughly cleaned with all loose thread, lint, and other debris removed. The case shall be free from irregularities or defects which adversely affect appearance, performance, reliability, or durability.

Product Demonstration Model. When required, offerers shall submit samples of their intended production. The product demonstration model will consist of units independently developed. Product demonstration models will be analyzed and evaluated by the government. Evaluation criteria and basis for award are contained in the solicitation. Product demonstration models will be retained by the government. One (1) product demonstration model approved by DPSC under the resultant contract will serve as a manufacturing standard for the corresponding production items delivered under this contract. Offerers are advised that the product demonstration model does not relieve the successful offerer of his responsibility to perform in accordance with the Commercial Item Description specified above.

Regulatory Requirements. The offeror/contractor is encouraged to use recovered materials in accordance with Public Law 94-580 to the maximum extent practicable.

Quality Assurance

Certification. The contractor shall certify that the product offered meets the salient characteristics of this description including Figure 1. The contractor may use his own drawings, specifications, standards and quality assurance practices to the extent they comply with this description. The government reserves the right to require proof of such conformance prior to the first delivery, and thereafter, as may be otherwise provided for, under the provisions of the contract. Reliance on contractor quality assurance systems shall not relieve the contractor of the responsibility of ensuring that all products or supplies submitted to the government for acceptance comply with all requirements of the contract.

Examination

Visual Examination. The field cases shall be examined for the defects listed below. The lot size shall be expressed in units of field cases. The sample unit is one field case.

Check the source to verify that this is the current version before use.

Defects. The field cases shall be examined for the following defects:

Body: any hole, cut, tear, color not as specified; any spot or stain (outside); thread ends not removed; failure to clean, remove lint or other foreign matter, measurement of item not as specified. Any component, assembly, finish or workmanship feature not in compliance with applicable requirements of this Commercial Item Description

Leather: evidence of loose flesh, slaughter cuts, abrasions or scratches, holes, hip marks, grub damage, brand marks, wrinkles, flanky, spongy, pipey or stretchy leather, not dyed and finished on grain side; not black in color; improper or incomplete burnishing of matched edges.

Thread/Stitching: not type specified, skipped stitching, open seam; loose thread tension; failure to tie and fuse thread ends, stitches per inch not as specified.

Hardware: Snap fastener not as specified or omitted; improperly mated, clinched or seated; any other malfunction adversely affecting ease of operation.

Bar Code: Bar code omitted or not readable by scanner, Human-Readable Interpretation (HRI) omitted or illegible; bar-coded type not as specified, code density not as specified.

Dimensional Examination. The finished field case shall conform to the dimensions specified in Figure 1. Any dimension that is not within the established tolerance shall be classified as a defect. The sample unit shall be one field case.

Packaging Examination. The fully packaged shipping containers shall be examined in accordance with defects listed below. The lot size shall be the number of shipping containers in the inspection lot.

EXAMINE	DEFECT
Marking (exterior and interior)	Omitted; incorrect; illegible; of improper size, location, or method of application
Materials	Any component missing, damaged, or not as specified

Check the source to verify that this is the current version before use.

EXAMINE	DEFECT
Workmanship	Inadequate application of components, such as: incomplete closure of container flaps, loose strapping, improper taping, or inadequate stapling
Content	Number of items in container is more or less than required
	NSN shown on one or more items not as specified on shipping container
Palletization	Length, width, or height exceeds specified maximum requirements
	Pallet type not as specified
	Load not bonded as specified

Preservation, Packing, and Marking. The preservation, packing, and marking shall be as specified in the contract or order.

STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL

INSTRUCTIONS

1. The preparing activity must complete blocks 1, 2, 3, and 8. In block 1, both the document number and revision letter should be given.
2. The submitter of this form must complete blocks 4, 5, 6, and 7.
3. The preparing activity must provide a reply within 30 days from receipt of the form.

NOTE: This form may not be used to request copies of documents, nor to request waivers, or clarification of requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
