INCH-POUND

MIL-B-49458(ER)
AMENDMENT 1
28 February 1991

MILITARY SPECIFICATION

BATTERIES, NON-RECHARGEABLE, LITHIUM MANGANESE DIOXIDE

This amendment forms a part of MIL-B-49458(ER), dated 25 June 1986, and is approved for use by the Laboratory Command, Department of the Army and is available for use by all Departments and Agencies of the Department of Defense.

Page 14

Paragraph 4.6.1.5.1 - Delete in its entirety and substitute:

"4.6.1.5.1 Sampling plan. A sample of n_s batteries shall be selected at random from production for each shipment lot in amounts determined from the following formula, and rounded off in case of fractions to an adjacent integer (up or down for each shipment lot), so that exactly n batteries have been assigned to both T and D capacity tests when the sample for the final shipment of the contract lot has been drawn.

$$n_s = a + (N_s/N) \times 2n$$

Where:

a= 10 batteries for ILR capacity testing
n_s= total number of sample batteries to be taken from each shipment lot.
N_s= number of batteries in the shipment lot
N= number of batteries in the contract lot
n= number of batteries to be taken from the contract lot for each of two capacity tests, T and D, in accordance with Table VII (total number of T and D samples selected is 2n)."

Add the following new paragraph:

"4.6.1.5.1.1 Allocation of sample batteries for Group D inspection. The number of batteries, n_s, selected from a shipment lot, shall be assigned at random at the Government test facility, so that 10 batteries will be submitted for the ILR capacity test and the remainder (n_s-10) split approximately in half for the T and D tests. Such assignment shall result in the allocation of exactly n batteries to both T and D capacity tests after the final shipment on the contract lot is made. If necessary, the sample size n_s taken from the last shipment lot of the contract lot shall be adjusted so that this result is achieved."

Page 16

Delete Table VII in its entirety and substitute the following:

TABLE VII Sample Size and Acceptance Number for Both T and D Tests

Contract Lot Size "N"	Sample Size "n" for T and D test from contract lot.	1/Acceptance No. for T and D tests.
0 to 110	5	2/ --
111 to 500	15	3
501 to 800	25	5
801 to 1,300	35	7
1,301 to 3,200	50	9
3,201 to 8,000	75	13
8,001 to 22,000	110	18
22,001 to 110,000	150	24
over 110,000	225	34

1/ When the number of capacity values falling below the minimum requirements specified (See 3.1). for a given test is equal to or less than the associated acceptance number, the contract lot from which the samples were drawn have met the requirements of that test.

2/ Determination of compliance specified in 4.6.1.5.2 shall not apply to contract lot sizes of less than 111.

Check the source to verify that this is the current version before use.

Paragraph 4.6.1.5.2 - Delete in its entirety and substitute:

"4.6.1.5.2 Compliance. The entire contract lot shall be considered as complying when the T and D tests show compliance as specified in Table VII, and the number of ILR failures for the contract lot does not exceed twenty (20) percent of the number of samples submitted to ILR testing."

Paragraph 4.6.1.5.3.1, second line - Delete "4.7.1.5.2" and replace with "4.6.1.5.2."

Paragraph 4.6.1.5.3.1, third line - Delete "inspection battery lot" and replace with "contract lot".

Page 17

Paragraph 4.7.3, sixth line - Delete "20°F" and replace with "-20°F".
