COMMERCIAL ITEM DESCRIPTION

BAGS, POLYETHYLENE, CHEMICAL, BIOLOGICAL, RADIOLOGICAL, AND NUCLEAR PROTECTIVE CLOTHING AND ACCESSORIES

The General Services Administration has authorized the use of this commercial item description by all federal agencies.

1. SCOPE. This commercial item description covers the requirements for commercially available polyethylene bags used in combination with the chemical agent resistant unit pack barrier bags for the packaging of chemical, biological, radiological, and nuclear protective clothing and accessories.

2. CLASSIFICATION.

2.1 Types. The polyethylene bags shall be available in the following types:

Type I - Reclosable storage bag with interlocking closure
Type II - Reclosable storage bag with slider closure
Type III - Rverbag

3. SALIENT CHARACTERISTICS.

3.1 Description.

3.1.1 Type I. The Type I bag shall be a flat style bag without a gusset and shall be reclosable by means of an interlocking seal closure, extending the full width of the bag. The seal shall not be less than 1/2-inch and no more than 3/4-inch from the top of the bag when measured to the middle of the seal. The interlocking seal shall close by applying pressure with the fingers to the seal area and shall open by pulling apart each side of the seal with the fingers. The Type I bag shall be transparent and without color.

Beneficial comments, recommendations, additions, deletions, clarifications, and any data that may improve this document should be sent to: Attn: DLA Troop Support, 700 Robbins Avenue, Philadelphia, PA 19111-5096. Since contact information can change, verify the currency of the address information using Acquisition Streamlining and Standardization Information System (ASSIST) online database https://assist.dla.mil.

AMSC N/A FSC 8415

DISTRIBUTION STATEMENT A. Approved for public release. Distribution is unlimited.

Check the source to verify that this is the current version before use.

3.1.2 Type II. The Type II bag shall be a flat style bag without a gusset and shall be reclosable by means of a slide-lock. The closure shall extend the full width of the bag. The bag shall be transparent and without color.

3.1.3 Type III. The Type III bag shall be a flat style bag without a gusset and shall be formed using two sheets or by folding one sheet of material. Heat-sealable surfaces of the polyethylene material shall be placed face-to-face, heat-sealing along both sides and the bottom edge as required. Bags fabricated by the side-weld process shall be folded and have two side seams. The side seams shall be parallel to each other and to the outer edges of the bag in all cases. The bottom fold shall be at right angles to the side seams. The Type III bag shall be able to be heat-sealed closed and shall have a minimum of one (1), 1/4-inch diameter vent hole per bag. There shall be no more than four (4) vent holes per bag. The bag shall be transparent and without color.

3.2 Physical requirements. The bags shall be transparent and without color, shall be made of single-layer polyethylene, and shall conform to the following requirements:

TABLE I. Physical requirements.

REQUIREMENT	CLASSIFICATION		TEST METHOD
	Type I and Type II	Type III	
Thickness (each side of bag) (minimum)	4.0 mils	3.0 mils	1/
Seal strength			
Interlocking seal	1.0 lbs. 2/	--	ASTM F88

1/ When tested using a calibrated micrometer

3.2.1 Dimensions. The finished unit pack barrier bag shall meet the dimensional requirements specified in the acquisition documentation (see 7.5).

3.3 Workmanship. The finished bags shall conform to the quality of the product established in this document. The bags shall be free from defects which may impair their serviceability, appearance, uniformity, and quality assurance standards defined by the technical data in the procurement documents.

4. REGULATORY REQUIREMENTS. Unless otherwise specified, the offeror/contractor is encouraged to use recovered, recycled, bio based, and environmentally preferable materials to the maximum extent practicable, in accordance with paragraph 23.403, 23.404(b) of the Federal Acquisition Regulation FAR, or the sustainable acquisition of EO 13693; as applicable. (See 7.1.2).

5. PRODUCT CONFORMANCE PROVISIONS.

5.1 Product conformance. The bags shall meet the salient characteristics of this Commercial Item Description (CID), conform to the producer's own drawings, specifications, standards, and quality assurance practices, and be the same product offered for sale in the commercial marketplace. The Government reserves the right to require proof of such conformance.

Check the source to verify that this is the current version before use.

5.2 Market acceptability. The finished bags offered must have been sold to the government or commercial market.

5.3 End item inspection procedures. Sampling for inspection shall be conducted in accordance with ASQ/ANSI Z1.4 - Sampling Procedures and Tables for Inspection of Attributes (see 7.2.2).

5.4 Visual examination. Each finished bag shall be examined for the defects listed in Table II as defined in ASTM D3990. The lot size shall be expressed in units of bags. The sample unit shall be one (1) bag.

TABLE II. Defects.

Physical requirements: Not transparent; unacceptable shade/color; composition not as specified; thickness not as specified; seal strength not as specified.
Bag defects: Seal width not as specified; seal not continuous; any hole, cut, or tear; fold, pleat, or crease caught in the sealed edges; vent hole missing or not as specified; discoloration or color not as specified: objectionable odor.
Workmanship: Failure to meet physical requirements; dimensions not as specified; design not as specified; serviceability, reliability and quality of materials not as defined by this document.
Packaging: Not packaged in accordance with the contract or procurement documents.

5.5 Dimensional examination. The finished bags shall conform to the dimensions specified in 3.2.1 when measured as stated. Any dimension that is not within the established tolerance shall be classified as a defect. The sample unit shall be one (1) bag.

5.6 Acceptance criteria. Acceptance criteria shall be as specified in the contract or procurement documents (see 7.5).

6. PACKAGING. Preservation, packing, and marking shall be as specified in the contract or order (see 7.5).

7. NOTES

7.1 Sources of government documents.

7.1.1 Copies of Government documents are available online at https://quicksearch.dla.mil.

7.1.2 EO 13693 information is available online at https://www.epa.cov.

7.1.3 Federal Acquisition Regulations (FAR) are available online at https://acquisition.gov/https://acquisition.gov.

7.2 Sources of non-Government documents.

7.2.1 ASTM test methods are available online at https://www.astm.org.

7.2.2 ASQ/ANSI Z1.4 – Sampling Procedures are available online at https://asq.org.

Check the source to verify that this is the current version before use.

7.3 Intended use. The Type I reclosable storage bag is used to prolong the service life of the end item after the sealed, unit pack barrier bag is opened. The Type II reclosable storage bag is used to prolong the life of field expedient repair kit patches. The Type III overbag is used to protect the sealed, unit back barrier bags and prevent abrasion or damage when multiple sealed unit pack barrier bags are placed into a fiberboard shipping container.

7.4 Certificate of compliance. The contracting activity may select to accept a certificate of compliance for a stated requirement.

7.5 Ordering data. The contract or order should specify the following:

a. Title, number, and date of this Commercial Item Description (CID)
b. Types required (see 2.1)
c. Bag dimensions required (see 3.2.1)
d. Product conformance (see 5.1)
e. Acceptance criteria provisions (see 5.6)
f. Packaging requirement (see 6)

7.6 Key words.

Heat-sealable
Interlocking
Reclosable
Resealable
Slider
Transparent
