September 8, 1967 and
Fed. Spec. C-C-310
June 25, 1964

FEDERAL SPECIFICATION

FLAVORED MILK (CHOCOLATE) AND FLAVORED DAIRY DRINK (CHOCOLATE)

This specification was approved by the Commissioner, Federal Supply Service, General Services Administration, for the use of all Federal agencies.

1. SCOPE AND CLASSIFICATION

1.1 Scope. This specification covers the requirements for pasteurized chocolate milk and chocolate flavored drinks for use by all Federal agencies. This does not exclude the delivery of chocolate milk or chocolate drink meeting the applicable requirements of this specification.

1.2 Classification.

1.2.1 Types and classes. The products covered by this specification shall be of the following types and classes as specified (see 6.1).

Type I - Chocolate flavored milk, pasteurized (minimum 3.25 percent milkfat).

Class 1 - Plain (nonfat milk solids not added).
Class 2 - Nonfat milk solids added (see 3.3.1.2).

Type II - Chocolate flavored lowfat milk, or chocolate flavored drink pasteurized (minimum 0.50 precent milkfat, maximum 2.0 percent milkfat).

Class 1 - Plain (nonfat milk solids not added).
Class 2 - Nonfat milk solids added (see 3.3.1.2).

Type III - Chocolate flavored skimmed milk or chocolate flavored drink pasteurized (maximum 0.50 percent milkfat).

Class 1 - Plain (nonfat milk solids not added).
Class 2 - Nonfat milk solids added (see 3.3.1.2).

1.2.1.1 For civil agencies. The minimum composition requirements for the finished products shall be governed by the local or state laws or regulations in the area where the finished product is delivered, but shall be not less than the composition specified in 3.3 for each type.

1.2.1.2 All types shall contain added vitamins A and D (see 3.3.2) when specified by the procuring agency (see 6.1). When vitamins A and D are not specified or specifically excluded by the procuring agency, they may be added.

2. APPLICABLE DOCUMENTS

2.1 The following documents of the issue in effect on date of invitation for bids or request for proposal, form a part of this specification to the extent specified herein.

(Activities outside the Federal Government may obtain copies of Federal Specifications, Standards, and Handbooks as outlined under General Information in the Index of Federal Specifications and Standards and at the prices indicated in the Index. The Index, which includes cumulative monthly supplements as issued, is for sale on a subscription basis by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402.

(Single copies of this specification and other Federal Specifications required by activities outside the Federal Government for bidding purposes are available without charge from Business Service Centers at the General Services Administration Regional Offices in Boston, New York, Washington, D.C., Atlanta, Chicago, Kansas City, Mo., Fort Worth, Denver, San Francisco, Los Angeles, and Seattle, Washington.

(Federal Government activities may obtain copies of Federal Specifications, Standards, and Handbooks and the Index of Federal Specifications and Standards from established distribution points in their agencies.)

Military Publication:

Directory of Sanitarily Approved Food Establishments for Armed Forces Procurement.

Military Standard:

MIL-STD-175 - Minimum Sanitary Standards for the Equipment and Methods for the Handling of Milk and Milk Products in Bulk Milk Dispensing Operations.

(Copies of Military Specifications and Standards required by contractors in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

2.2 Other publications. The following documents form a part of this specification to the extent specified herein. Unless otherwise indicated, the issue in effect on date of invitation for bids or request for proposal shall apply.

Governmental:

Working Reference of Livestock Regulatory Establishments, Circuits and Officials.
Federal Food, Drug, and Cosmetic Act and Regulations Promulgated Thereunder.

(Copies may be obtained upon application, accompanied by money order or cash, to the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402. Prices may be obtained from the Superintendent of Documents.)

Grade "A" Pasteurized Milk Ordinance - 1965 Recommendations of the U. S. Public Health Service, Public Health Service Publication No. 229.
Grade "A" Dry Milk Products - Recommended Sanitation Ordinance Code for Dry Milk Products used in Grade A Pasteurized Milk Products. Supplement 1 to the Grade "A" Pasteurized Milk Ordinance - 1965 Recommendations of the USPHS.
Methods of Making Sanitation Ratings of Milksheds - USPHS Publication, 1965.
Sanitation Compliance and Enforcement Ratings of Interstate Milk Shippers. USPHS.
Evaluation of Milk Laboratories Recommended by the United States Public Health Service, USPHS Publication No. 999-FP-3

(Single copies may be obtained from the Division of Food Sanitation, Food and Drug Administration, U. S. Department of Health, Education and Welfare, Washington, D. C. 20204.)

Nongovernmental:

Standard Methods for the Examination of Dairy Products.

(Copies are published by the American Public Health Association , 1790 Broadway, New York, New York.)

Official Methods of Analysis of the Association of Official Agricultural Chemists.

(Copies are published by the Association of Official Analytical Chemists, P. O. Box 540, Benjamin Franklin Station, Washington, D. C. 20044.)

3. REQUIREMENTS

3.1 Materials.

3.1.1 Milk. The raw milk used in the preparation of chocolate flavored milk or chocolate flavored shall be drawn from cows in herds located in a modified accredited area or from cows in herds fully accredited as tuberculosis-free by the U.S. Department of Agriculture and from cows in herds located in a modified, certified area or from cows in herds certified brucellosis-free by the U. S. Department of Agriculture, or in the process of being accredited or certified. The milk shall be the lacteal secretion practically free from colostrum, obtained by the complete milking of one or more healthy cows, and shall be wholesome, fresh, sweet, normal in appearance and odor and shall be subject to inspection by the procuring agency or duly authorized representative.

3.1.1.1 Bacterial requirements. Raw milk shall not exceed a standard plate count of 100,000/ml. prior to commingling or 300,000/ml. prior to pasteurization.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:05Z
Check the source to verify that this is the current version before use.

3.1.1.2 Source. The raw milk shall be produced in localities having and enforcing milk ordinance that conform to the requirements for grade "A" raw milk for pasteurization as defined in the Grade "A" Pasteurized Milk Ordinance - 1965 Recommendations of the U. S. Public Health Service, or the production and processing facilities, and regulatory laboratories shall meet the requirements of the Grade "A" Pasteurized Milk Ordinance - 1965 Edition. Only milk products meeting the requirements of Grade "A" Dry Milk Products used in Grade A Pasteurized Milk Products shall be used as the source of milk solids if milk solids are used.

3.1.1.3 Handling prior to processing. Unless the milk is processed within two hours following receipt of the milk at the processing plant, all incoming milk to be used in these products shall be cooled immediately on arrival to a temperature of 45° F. or lower until processed.

3.1.2 Flavoring agents. The chief flavoring agent used in these products shall be derived from cocoa or chocolate liquor or a combination of both. The chocolate flavoring material may be added to the product in the form of a powder or sirup. In addition to cocoa or chocolate liquor (or a combination of both) sweetening agents, salt, natural or artificial flavors (except artificial or imitation chocolate), and stabilizers may be included in the flavoring compound or added separately.

3.1.2.1 Cocoa and chocolate liquor. Cocoa, medium fat, or chocolate liquor (or a combination of both), shall conform to the Definitions and Standards, Federal Food and Drug Administration.

3.1.2.2 Sweetening ingredients. Sweetening ingredients shall be one or more of the following: Sugar, corn sirup, corn sirup solids, dextrose or corn sirup solids, dextrose or corn sugar or mixture of liquid sugar containing invert sugar and corn sugar.

3.1.2.2.1 Sugar. Sugar shall be sucrose (either beet or cane) of food grade quality either dry or in liquid form.

3.1.2.2.2 Corn sirup. Corn sirup shall be clarified and concentrated aqueous solution of the products obtained by the incomplete acid or enzyme hydrolysis of corn starch and shall be food grade quality.

3.1.2.2.3 Corn sirup solids. Corn sirup solids shall be a spray dried corn sirup of food grade quality.

3.1.2.2.4 Dextrose. Dextrose shall be of food grade quality, made from starch.

3.1.2.2.5 Invert sugar shall be a mixture of equal parts of glucose and fructose such as results from the hydrolysis of sucrose and shall be of food grade quality.

3.1.2.3 Salt. Salt shall be clean, white, refined non-iodized sodium chloride of food grade quality with or without anti-caking agents and free from extraneous material and prepared in accordance with good manufacturing practice.

3.1.2.4 Additional flavoring. Flavoring, in addition to cocoa or chocolate liquor, sweeting ingredients, and salt, shall be limited to pure vanilla, vanilla extracts, imitation vanilla, vanillin, and ethyl vanillin (artificial flavors), dry malt, malt sirup, or malt extract, of food grade quality either singly or combination thereof. When the vanilla flavoring is in a dry form, it may contain carriers such as lactose, dextrose, sucrose, starch tricalciumphosphate, or other approved food carriers.

3.1.2.5 Stabilizers. Stabilizers shall be hydrophillic colloids of food grade quality. They may include vegetable gums, soluble starch, gelatin, algin, (sodium alginate), carrageenan, or any other food grade stabilizer adaptable to preventing sedimentation or otherwise improving the physical properties of the product. The stabilizers used shall have been authorized by regulations promulgated under the Food Additives Amendment (21 CFR, Part 121), to the Federal Food, Drug and Cosmetic Act, for this type of food.

3.2 Preparation.

3.2.1 Pasteurization (all types). The chocolate flavored milk or chocolate flavored drink shall be pasteurized so that every particle will be heated to a temperature of not less than 150° F. and held continuously at such temperature for not less than 30 minutes or heated to a temperature of not less than 166° F. and held continuously at such temperature for not less than 15 seconds; or it shall be pasteurized by any other combination of temperature and time recognized by the U. S. Public Health Service to be equally efficient and which is approved by State or Federal health authorities. After pasteurization, the product shall be cooled to 45° F. or less, and maintained thereat.

3.2.2 Homogenization. The finished product shall have been homogenized to insure breakup of the fat globules and dispersion of the flavoring ingredient (see 3.3.1).

Source: https://assist.dla.mil -- Downloaded: 202610-26T11:05Z
Check the source to verify that this is the current version before use.

3.2.3 Vitamins A and D. When vitamins A and D are specified, the milk shall meet the requirements of 3.3.2. Vitamin A content may be increased by the addition of concentrate of vitamin A dissolved in an appropriate carrier. Vitamin D may be increased by the addition of a concentrate of Vitamin D dissolved in a food oil, but if such oil is not milk fat, the quantity thereof shall be not more than 0.01 percent of the weight of the finished milk.

3.3 Finished product. The finished product shall meet the following requirements when tested in accordance with the procedures outlined in section 4.

3.3.1 Physical requirements. The finished product shall have a pleasing and desirable sweetened chocolate flavor, and shall be free from bitter, scorched, or other objectionable favors. The body shall be smooth but not excessively viscous and shall not leave a filmy or otherwise undesirable feeling in the mouth. It shall have a uniform chocolate color throughout, free from unnatural chocolate colors (grayish or purplish hues or shades). Vitamins A and D, and milk solids-not-fat may be added if specified (see 6.1).

3.3.1.1 In addition, types I and II products shall meet the performance requirements specified in the definition for homogenized milk as set forth in the Grade "A" Pasteurized Milk Ordinance.

3.3.1.2 The milk-solids-not-fat in class 2 products shall be increased to not less than 10.0 percent.

3.3.2 Chemical requirements.

	Type I Class 1	Type I Class 2	Type II Class 1	Type II Class 2	Type III Class 1	Type III Class 2
Milk fat, percent						
(not less than)	3.25	3.25	0.50	0.50	---	---
(not more than)	--	--	2.00	2.00	0.50	0.50
Total solids, percent (not less than)	17.75	19.50	15.25	17.00	14.75	16.50
Vitamin A, when specified	All types - 2000 U. S. P. units per quart.					
Vitamin D, when specified	All types - 400 U. S. P. units per quart.					
Phosphatase activity (Scharer Rapid Method)	All types - activity equivalent less than 1 mcg of phenol per ml. of milk.					

3.3.3 Bacteriological requirements. The bacterial limit of chocolate flavored milk and chocolate flavored drink milk shall not exceed a standard plate count of 20,000 per ml. and coliform count of 10 per ml.

3.4 Age of product. The finished product shall be delivered within 48 hours after date of pasteurization, except when processing or delivery schedules warrant extension of time, and such extension is so specified in the contract (see 6.1).

3.5 Delivery temperature. The internal temperature of the products covered by this specification at the time of delivery shall not exceed 50° F.

3.6 Plant, equipment, workmanship. Receiving stations, processing plants, equipment operations, personnel practices and sanitary practices used in production and transportation of these products shall be approved by the inspection agency, as designated by the procuring agency, in accordance with 4.3.2.

3.7 Federal Food, Drug, and Cosmetic Act. All deliveries shall conform in every respect to the provisions of the Federal Food, Drug, and Cosmetic Act and regulations promulgated thereunder.

Source: https://assist.dla.mil -- Downloaded: 20261O-26T11:05Z
Check the source to verify that this is the current version before use.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. The supplier is responsible for meeting all the provisions of the specification prior to submission to the Government for acceptance. Unless otherwise specified in the contract or order, the supplier is required to perform the examination and tests prescribed herein using his own or any other inspection facilities and services acceptable to the Government.

4.1.1 Inspection records of the examination and tests shall be complete and made available to the Government as specified in the contract or order. The Government reserves the right to perform any of the inspections set forth in the specifications where such inspections are deemed necessary to assure that supplies and services conform to prescribed requirements.

4.2 Sampling. Samples of finished products covered by this specification and samples of any materials, components, or constituents entering into the preparation of finished products may be taken at any time by the Government inspector to determine compliance with the requirements. Procedures for the collection and holding of samples; the selection and preparation of apparatus, media, and reagents; and the analytical procedures, incubation, reading, and reporting of results shall be in compliance with Standard Methods for the Examination of Dairy Products, and the Official Methods of A.O.A.C. Such samples, as are required, shall be at the expense of the supplier, except that samples taken at destination shall be at the expense of the Government.

4.3 Inspection.

4.3.1 General. Inspections shall be made by the procuring agency of a duly authorized representative at the time and place designated by the procuring agency. It may be at the dairy farm of milk plant, both during and after processing, or at any point in transit, or after delivery at the point of destination.

4.3.2 Preacceptance plant qualifications and raw milk supply survey.

4.3.2.1 Ratings. Raw milk for pasteurization, receiving stations, and pasteurizing plants shall be rated in accordance with Methods of Making Sanitation Ratings of Milksheds (see 2.2). The pasteurized milk rating of the supplier shall be at least 90. A minimum rating of 90 shall be required for approval of individual receiving stations and pasteurizing plants.

4.3.2.1.1 Plant qualification (civil agencies). Sanitation compliance ratings of interstate milk shippers (see 2.2) may be used to determine compliance of producer dairies, receiving station and, bulk milk pasteurizing plants.

4.3.2.1.2 Preacceptance inspection (plant sanitation inspection) (Military agencies). Award of contracts shall be limited to plants which have received prior sanitary approval by the Military Veterinary Services in accordance with the Grade "A" Pasteurized Milk Ordinance or those plants having a pasteurization plant compliance rating of 90 or more, as certified by a State milk sanitation rating officer and listed in the document titled, "Sanitation Compliance and Enforcement Ratings of Interstate Shippers" published quarterly by the U.S. Public Health Service (see 2.2).

4.3.2.1.3 Establishment source (Military agencies). Examination shall be made to determine that all processed milk products have been manufactured, packaged and shipped by plants approved as Military sources in accordance with 4.3.2.1.2. Nonconformance to the above requirements shall be cause for rejection of the lot or the involved quantity of finished product made therefrom, as applicable.

4.3.3 Plant inspection. The passing as satisfactory of any detail of processing or materials shall not relieve the contractor of responsibility for faulty workmanship or materials which may be discovered at any time prior to final acceptance.

4.3.4 Final inspection. Unless otherwise specified (see 6.1), final inspection shall be made after delivery at the point of destination.

4.3.5 Basis for acceptance by the Government. The contractor is responsible for offering to the Government for acceptance only those items that conform to all contractural requirements. The Government will conduct quality conformance inspections required to determine acceptability of the components and finished product in accordance with inspection procedures set forth in 4.3.6 through 4.4.2 as follows:

4.3.6 Component and material inspection. In accordance with 4.1, components and material shall be inspected and tested in accordance with all requirements of reference specifications, drawings, and standards unless otherwise excluded, amended, modified or qualified in this specification or applicable purchase document.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:05Z
Check the source to verify that this is the current version before use.

4.3.6.1 Milk. Records of the results of the examination and testing of the milk supply shall be available for review by the procuring agency. If upon examination of the records, it is determined that the processing plant has processed raw milk not in compliance with the requirements of 3.1.1, the finished product shall be rejected.

4.3.6.1.1 Inspection shall be made to assure that milk used in the preparation of this product is obtained from areas designated by the U. S. Department of Agriculture as modified tuberculosis-free and from cows in herds certified brucellosis-free by the USDA or in the process of being accredited or certified. This determination shall be made by contacting the nearest office of the state officials in charge of animal disease control as listed in this Working Reference of Livestock Regulatory Establishments, Circuits and Officials.

4.3.6.2 Multi-use and single-service containers. Records of quarterly tests for compliance with the bacterial requirements of 5.1.1 shall be examined by the procuring agency or a duly authorized representative. Noncompliance with the above requirements shall be cause for rejection of the lot or the involved quantity of finished product made therefrom, as applicable.

4.3.6.3 Examination of cocoa, chocolate liquor, sweetening ingredients, salt, Vitamin A and D concentrates, flavoring material and stabilizers. Conformance of these ingredients to the requirements of 3.1.2 and 3.2.3 as concerns identity shall be determined by examination of pertinent labels, invoices or other valid documents. Noncompliance to one or more identity requirement shall indicate an unacceptable ingredient and use of such shall be cause for rejection of the involved end item.

4.3.7 In-process examination.

4.3.7.1 Equipment, procedures and controls. Examination shall be performed during processing to determine compliance with 3.2 requirements pertaining to equipment, procedures and controls. Records shall be maintained for specific procedures of time and temperature controls covering product included in purchase contract. Noncompliance with the requirements of 3.2, as determined by examination of records or actual examination, shall be cause for rejection of the involved finished product.

4.3.7.2 Formulation. Examination shall be made during formulation of the product (see 3.2) for vitamin fortification requirement, when specified (see 3.3.1.2) and for addition of milk solids-not-fat in class 2 products (see 3.2.3). Formulation records covering involved quantity of finished product shall be retained and made available for review. Noncompliance with the above referenced requirements as determined by examination of records or by actual examination shall be cause for rejection of the involved quantity of finished products.

4.3.7.3 Examination for age and temperature of product at time of delivery. Determination of compliance with requirements of 3.4 and 3.5 shall be determined from storage records and code or marked date of packaging. Noncompliance with the requirements of 3.4 and 3.5 unless otherwise stated (see 6.1), shall be cause for rejection of the lot.

4.3.8 Sampling for verification testing. (Not applicable to Military agencies.) Unless otherwise specified (see 6.1), the procuring agency or duly authorized representative will select verification samples to check contractor compliance with applicable finished product requirements (see 3.3) at not less than the following rate:

Initial or retest period	Sampling rate 1/
(If supplier has not had a contract in previous 90 days or if 3 or more of the last 5 samples tested from supplier are unsatisfactory.)	One sample from each delivery until 3 out of the last 5 are satisfactory and then sample at routine testing rate.
Routine test period	
(At least 3 out of the last 5 samples tested from supplier shall be satisfactory.)	One sample per month.

1/ The total volume needed for all tests (see 4.4) could be as much as a half-gallon, if fewer tests are required (see 6.1) a proportionally smaller volume will be needed. Total volume may be contained in any combination of container sizes. A representative aseptically drawn sample should be obtained from containers larger than 1/2 gallon.

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:05Z
Check the source to verify that this is the currentversion before use.

4.3.8.1 Product supplied under the provisions of this specification to more than one receiver from the same production lot by a contractor may, for the purposes of this paragraph, be sampled as one delivery. This does not preclude more intensive sampling by the receiver of product suspected of noncompliance.

4.3.8.1.1 Noncompliance with one or more requirement shall be considered in future assignment of approval under 4.3.2 and may be evidence of noncompliance as defined in 4.3.3.

4.3.9 Standby test samples. The Government reserves the right to withdraw and hold standy test samples of components or finished product or both (quantity of which shall not be more than twice that required by this specification) for inspection purposes. These samples, if not used, will be returned to the vendor upon request.

4.4 Tests. Test procedures and controls which differ from those specified herein may be used by the contractor if they provide a quality assurance equivalent to that specified. If the Government inspection activity determines that such procedures and controls do not provide, as a minimum, such quality assurance the contractor will use the test procedures set forth herein. In case of dispute as to test results, the test methods specified herein will govern.

4.4.1 Chemical analyses. Unless otherwise specified, chemical analyses, if required by the purchaser (see 6.1), shall be made in accordance with the following methods from Official Methods of Analysis of the Association of Official Agricultural Chemists (AOAC))Standard Methods for the Examination of Dairy Products, or in accordance with methods that give equivalent results.

4.4.1.1 Test method.

Test	Method
Milkfat	Roese - Gottleib 1/
Total solids	Total Solids (Method 1)
Phosphatase activity	Scharer Rapid Method

1/ The Gerber test for fat in chocolate flavored milk or chocolate flavored drink outlined in Standard Methods for the Examination of Dairy Products may be used, but in case of dispute the results of the Roese - Gottleib Test shall be final.

4.4.1.2 Antibiotics. Samples suspected of containing antibiotics shall be tested in accordance with Standard Methods for the Examination of Dairy Products: Chapter: Microbiological Methods, Disc assay or plate tube.

4.4.1.3 Vitamins A or D content. If formulation records (see 4.3.7.2) concerning the quantity of vitamins A or D are questioned, the quantity of Vitamins A or D shall be determined by the official methods. The official methods shall be as described in AOAC, Chapter: Vitamins and Other Nutrients.

4.4.1.4 Pesticides, disinfectants, preservatives, or added water. Samples suspected of containing any of these adulterants shall be tested by the appropriate AOAC method from Chapter 24: Metals, other Elements, and Residues in Foods. Chapter 5: Disinfectants: Chapter 27: Preservatives and Artificial Sweeteners; Chapter 15: Dairy Products-Section, added water-method Cryoscopic.

4.4.2 Bacteriological examination. Unless otherwise specified, bacteriological examination if required by the purchaser (see 6.1), shall be made in accordance with the methods described in Standard Methods for the Examination of Dairy Products. The procedures shall be those specified therein for:

(a) Standard plate count at 32° C.
(b) Simplified methods for viable counts of raw milk at 32° C.
(c) Coliform test with solid media at 32° C.

4.4.3 Homogenization efficiency. Homogenization efficiency of type I or II products shall be determined as defined in the Grade "A" Pasteurized Milk Ordinance.

4.4.4 Test for flavor and body characteristics. Pour a portion of the sample into serving glass and observe. The product shall have a pleasing and desirable, sweetened chocolate flavor, and shall be free from bitter, scorched, or other objectionable flavors. The body shall be smooth but not excessively viscous and shall not leave a filmy or otherwise undesirable feeling in the mouth. The color shall be uniform chocolate color free from unnatural grayish or purplish hues or shades.

Check the source to verify that this is the currentversion before use.

5. PREPARATION FOR DELIVERY

5.1 Packaging, level C. Milk shall be delivered in single or multiservice containers of the capacity specified in the contract or order (see 6.1). Or when specified (see 6.1) in sealed milk dispenser containers complying with MIL-STD-175B.

5.1.1 All containers shall be sound and clean and shall afford adequate and proper protection of the contents from contamination. The residual bacterial count of multi-use and single-service containers used for packaging pasteurized milk and milk products tested in accordance with 4.4.2 shall not exceed one per ml. of capacity or 50 colonies per 8 sq. inches of product-contact surface in 3 out of 4 samples taken at random on a given day.

5.1.2 All containers, except dispenser containers, shall be filled and closed by sanitary mechanical methods. Containers fabricated or formed at the contractor's plant shall be suitably protected from contamination during fabrication, forming and filling. The bulk milk dispenser containers shall be filled in a manner that will protect the top of the container effectively during filling, and after filling shall be immediately closed and sealed.

5.1.3 The pouring lip of all containers closed by cap or cover shall be completely covered to at least its largest diameter, by the cap or cover. Paperboard milk containers which do not form a pouring lip until opened are exempt from this requirement.

5.2 Packing, level C. Unless otherwise specified (see 6.1), the product shall be packed in containers which are acceptable to common carriers for shipment to point of destination specified in shipping instructions at the lowest transportation rate for such supplies.

5.3 Labeling and marking. Unless otherwise specified (see 3.7 and 6.1), labeling and marking complying with the local or state milk ordinances or regulations will be acceptable.

6. NOTES

6.1 Ordering data. Purchasers should select the preferred options permitted herein and include the following information in procurement documents:

(a) Title, number, and date of this specification.
(b) Type and class product required (see 1.2).
(c) Type and capacity of container required (see 5.1).
(d) Delivery schedule - frequency and age of product (see 3.4).
(e) When vitamins A and D are required or may not be added (see 1.2.1.2).
(f) When final inspection shall take place if not at the point of destination (see 4.3.4).
(g) When chemical analyses are required (see 4.4.1).
(h) When bacteriological analyses are required (see 4.4.2).
(i) When verification testing may be waived (see 4.3.8).
(j) When other than commercial labeling is required (see 5.3).

6.2 Contractor's inspection. The contractor should be required to assure that the product conforms with the specification prior to submission to the Government for final inspection.

6.3 Destination inspection. When the finished product has been inspected and passed at point other than destination, the contract should require that the product be inspected at destination for condition and quantity only. Unless otherwise specified, such inspection should be made by the receiving facility. However, inspection for quality may be made by the procuring agency or a duly authorized representative, when deemed necessary to verify contract compliance.
