DATA ITEM DESCRIPTION

Title: CONTAINER DESIGN RETRIEVAL SYSTEM (CDRS) DATA INPUT

Number: DI-PACK-80684E
AMSC Number: F10330
DTIC Applicable: No
Preparing Activity: 69 (AFLCMC/EZPAA)
Applicable Forms: N/A

Approved Date: 20220708
Limitation: N/A
GIDEP Applicable: No
Project Number: PACK-2022-003

Use/Relationship: The Container Design Retrieval System (CDRS) Data Input is used to continually update the Department of Defense (DoD) computerized CDRS database, and is accessible at https://lts.cce.af.mil/CDRS. Usage of the CDRS database precludes the design of new specialized containers when suitable containers exist and has a proven history of substantial cost avoidance.

This system is maintained by the Air Force Packaging Technology and Engineering Facility (AFPTEF) at Wright-Patterson AFB, http://www.aflcmc.af.mil/afptef.

a. This Data Item Description (DID) contains the format, content, and intended use information for the data deliverable resulting from the work task described in the solicitation.

b. This DID supersedes DI-PACK-80684D.

Requirements:

1. Reference documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. Format. The CDRS Data Input shall be in the contractor's format. The CDRS can be accessed at https://lts.cce.af.mil/CDRS. Completed CDRS Data Input shall be emailed to: CDRS@us.af.mil. Requestors with government Common Access Cards (CACs) can also submit data through CDRS.

3. Content. The CDRS Data Input shall specify the following container design characteristics:

a. Official container nomenclature.

b. National stock number (NSN).

c. Drawing number, Commercial or Government Entity (CAGE) Code, or design agency.

d. Reference documents, such as, identified technical report number, specification number, and sources for this information.

e. Tare weight – the weight in pounds of the empty container, including dunnage, in decimal values of one significant digit.

f. Maximum gross weight – the weight in pounds of the container, dunnage, and heaviest item shipped in the container in decimal values of one significant digit.

g. Quantity pack – number of items packed in a single container.

Check the source to verify that this is the current version before use.

h. High temperature (°F) – the upper temperature limits to which the container can be subjected and still function properly as determined by specification requirements, analysis, or testing.

i. Low temperature (°F) – the lower temperature limits to which the container can be subjected and still function properly as determined by specification requirements, analysis, or testing.

j. Container Dimensions (internal and external)

k. Container characteristics - major material used in container construction, container shape, container opening type, and type of shock mitigation system used.

l. Stacking height – the maximum superimposed load (in pounds) that the container, with item, can support or has been tested to (include specification number or test method).

m. Design cost – cost of designing, developing, prototyping, and testing container.

n. Unit price – the production unit cost of manufacturing the container relative to quantity purchased.

o. Packaged item designation – the official alpha-numeric assigned to the packaged item per MIL-STD-2073-1, *Standard Practice for Military Packaging*. (Copies of this document are available online at https://quicksearch.dla.mil.)

p. Packaged item nomenclature – the official name or title assigned, for example, fuse, bomb, engine, computer.

q. Packaged item NSN.

r. Container test report (optional).

End of DI-PACK-80684E.
