DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 110 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, D.C. 20503.

1. TITLE	2. IDENTIFICATION NUMBER
Test Information Sheet (TIS)	DI-QCIC-81536

3. DESCRIPTION/PURPOSE

3.1 The TIS is used to provide detailed planning information necessary to review the test program specifics, conduct the tests, record test data, and evaluate the test results.

4. APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC APPLICABLE	6b. GIDEP APPLICABLE
970124	F/AFMC-DOP		

7. APPLICATION/INTERRELATIONSHIP

7.1 This Data Item Description (DID) contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

7.2 This DID is applicable to engineering (developmental), preliminary qualification, qualification, and acceptance testing.

7.3 This DID interrelates with DI-FACR-80810A.

8. APPROVAL LIMITATION	9a. APPLICABLE FORMS	9b. AMSC NUMBER
		F7234

10. PREPARATION INSTRUCTIONS

10.1 Format. Contractor format is acceptable.

10.2 Content. The TIS shall include the title and number of the specification paragraph (if applicable), title of test, functional category, and whether flight or ground test. Each TIS shall include the following information, to the extent applicable on the particular test:

a. The prioritized objectives, test conditions, success and failure criteria for each objective, and the step-by-step procedures to be followed. These procedures will be to the level of detail to allow reproducibility of testing.

(Continued on Page 2)

11. DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Block 10, Preparation Instructions (Continued)

b. A description of the test item configuration as it relates to the system requirements, specification, and to the particular test. Examples of information include:

(1) The number of items to be tested and the number of times each item is to be tested.

(2) Description of all systems, subsystems, components, and their performance features having a direct bearing on the purpose of the test.

(3) Test parameters (e.g., velocity, altitude, flight maneuvers, power settings, weight changes, and center of gravity travel).

(4) Test profiles, performance predictions, anticipated system restrictions or limitations (redlines), with justification for each. Include specific high-risks to personnel and material or tests outside of normal parameters.

(5) Identification and location of all non-production equipment--data pickups, console controls, and recording equipment. For all non-production equipment used to simulate or substitute for production equipment (e.g., cables, etc.), identify the difference in salient characteristics (e.g., shielding, size, etc.).

(6) Test apparatus and method of installation.

(7) Safety considerations and hazardous operating procedures (e.g., propellant, electrical, high pressure, etc.).

(8) Security including special access considerations.

c. Test location, schedule, phasing, and duration of tests.

d. Description of support equipment required from other sources, such as government furnished equipment or associate contractor equipment.

e. Extent of government, prime contractor, and associate contractor participation.

f. Type, number and description of data recording devices to be used.

g. Data to be recorded, data reduction and analysis procedures, and data uncertainty criteria. Include test results presented in terms which can be correlated with specification requirements.

h. Toxic materials used in or resulting from the test and their respective handling and disposal requirements and procedures.

i. Proper location of warnings, cautions, and notes in the test procedures.

j. Certification(s) for personnel operating facility equipment.

k. Recovery methodology in case of test failure, including restart criteria (e.g., startover, start at last step successfully completed, etc.).
