DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.
This military standard is approved by the Department of the ARMY - AR, ME, MI and shall be used by that activity. All other military activities are required to employ this standard where suitable.
REVIEWER ACTIVITIES: ARMY - AR, ME, MI USER: ACTIVITIES: ARMY - ER

FED. SUP CLASS
6630

PART NUMBER	O/A DIMENSIONS (in.) H	W	D	WEIGHT (LB)	ELECTRICAL VOLTS	Hz
MS36525-1	6.5	8.25	11.5	12	115	50-60

MATERIAL: Case shall be of cast aluminum with a chemical resistant finish. The top of the case shall be fitted with a carrying-handle for portability. The analysis unit shall be corrosion-resistant, and the analysis cell shall be shock-mounted.

DESIGN: The analyzer shall be a single range instrument of the paramagnetic type, and shall have the following performance characteristics.

Range: One range selected between 0 and 100 percent oxygen (O_2). Minimum range span is 5% O_2. Maximum range span is 0 to 100% O_2.

Accuracy: PORM 1% of range span at constant total pressure.

Sensitivity: PORM 0.5% of range span.

Reproducibility: PORM 0.5% of range span.

Response time: For flowing samples.

Standard - One minute
Rapid response unit - 10 seconds.

Cell volume: Standard cell - 10 cm^3.
Static sample cell - 3 cm^3.

Required flow rate: Standard cell - 40 to 250 mL per minute.
Rapid response cell - 40 to 60 mL per minute.

Sample conditions: Gas free of solids or liquids, with a temperature between 50° to 104°F (10° to 40°C).

Readout: Oxygen concentration readout from a deflection type meter.

PURPOSE: To measure and indicate the percent by volume of oxygen in static or flowing gas samples.

NOTES:
1. Items differing from this Military Standard by minor variations in design or dimensions are considered standard under this document, provided such variations do not affect performance and are not in conflict with the material requirements as specified herein.
2. FSCM: 05721.
