COMMERCIAL ITEM DESCRIPTION

# HOOK, COAT AND HAT
# (ROBE HOOK, BATHROOM)

The General Services Administration has authorized the use of this commercial item description in preference to Federal Specification FF-H-111, types 1174 and 1175.

This commercial item description covers robe hooks with concealed fasteners for use in bathrooms.

Salient characteristics:

Shall have concealed wall fasteners.

Shall have two (2) horizontal (side by side) hooks integral with the wall flange.

Projection of hooks from back of flange to end of hooks shall be between 1-5/8 and 2 inches.

Shall be of the material and finish below as specified. Finishes shall conform with ANSI A156.18 "American National Standard For Materials And Finishes":

Finish Code 625 - Bright chromium plated brass.
Finish Code 628 - Clear anodized satin aluminum.
Finish Code 681 - Bright chromium plated zinc alloy.

Shall meet the load and finish requirements of ANSI A156.16 " American National Standard For Auxiliary Hardware" for Grade 3 garment hooks (This robe hook is not illustrated in ANSI A156.16).

Fasteners. All fasteners required for attachment shall be furnished with the hooks. The hardware shall be of suitable size and type and shall be compatible with the material of the hook.

FSC 5340

Standard commercial product. The robe hooks shall, as a minimum, be in accordance with the requirements of this specification and except for acquisitions from the Federal Prison Industries or from the blind and severely handicapped as defined in Federal Acquisition Regulations subparts 8.6 and 8.7 shall be the manufacturer's standard commercial or commercial-type product. Additional or better features, which are not specifically prohibited by this CID but are a part of the manufacturer's standard commercial product, shall be included in the robe hooks being furnished.

Workmanship. The robe hooks shall be clean of burrs and flashing and shall have no sharp edges or corners, no defects in appearance, and no defects which will affect serviceability.

Quality assurance provisions.

Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements as specified in this CID. Except as otherwise specified, the contractor may utilize his own facilities or any commercial laboratory acceptable to the Government. The Government reserves the right to perform any of the inspections or tests set forth in the specifications where such action is deemed necessary to assure that supplies and services conform to prescribed requirements. The contractor is responsible for insuring that components and materials used were manufactured, examined, and tested in accordance with referenced specifications and standards.

SAMPLING. Sampling for examination and test shall be in accordance with Military Standard MIL-STD-105 `SAMPLING PROCEDURES AND TABLES FOR INSPECTION BY ATTRIBUTE'. A lot shall consist of all hooks of one type submitted for inspection at one time, a sample unit shall be one robe hook with fasteners.

Visual and dimensional examination. Sample bath hooks shall be selected from each lot and examined for specified visual and dimensional characteristics. Samples shall be selected in accordance with General Inspection Level 1, AQL 2.5 percent defective. Existence of one or more of the following defects shall constitute failure of the sample unit:

Fasteners not concealed, not supplied, or not of compatible material.

Hooks not integral with wall flange.

Dimensions not as specified.

Unit not free of burrs, flashing, sharp edges, or sharp corners.

Unit contains defects that will affect serviceability or appearance.

Testing. Sample robe hooks shall be selected from each lot and load tested and finish performance tested in accordance with ANSI A156.16. Samples shall be selected in accordance with Special Inspection Level S-3, AQL 2.5 percent defective. Failure of any sample unit to conform with stated requirements shall constitute rejection of that sample unit.

Examination for preparation for delivery. An inspection shall be made to determine whether the packaging, packing, and marking comply with the requirements of the contract or purchase order. Examination for defects shall be in accordance with table I. For examination of interior packaging, the sample unit shall be one shipping container fully prepared for delivery. Sampling shall be in accordance with MIL-STD-105. The lot size shall be the number of shipping containers in the end item inspection lot. The inspection level shall be Special Inspection Level S-2 with an AQL of 4.0 defects per hundred units.

Table I
Preparation for delivery defects.

| Examine | Defects |
|---|---|
| Markings | Omitted; incorrect; illegible; improper size, location, sequence, or method of application. |
| Material | Any component missing, damaged, or not conforming to applicable requirements stated herein. |
| Workmanship | Inadequate application of components such as incomplete closure of container flaps, loose strapping, or distortion of container. |
| Contents | Quantity of container is more or less than required. Gross weight exceeds requirements of the box grade. |

Certification of load and finish requirements. When specified in the contract or purchase order, a certificate of conformance may be furnished in lieu of actual testing on a lot by lot basis providing that:

(1) Objective evidence dated not more than two (2) years prior to the date of the start of the contract as described in the solicitation or date of the purchase order as applicable shall be available.
(2) Tests specified in the industry standards referenced herein have been performed by an independent test facility acceptable to the Government.
(3) That the product being offered is the same brand and has been manufactured using the same material, processes and manufacturing techniques as the product tested.

Packaging and packing. The packaging and packing shall be as specified in the contract or purchase order.

Marking. Marking shall be as specified by contract or purchase order.

Regulatory requirements. In accordance with section 23.403 of the Federal Acquisition Regulations, the Government's policy is to acquire items composed of the highest percentage of recovered materials practicable, consistent with maintaining a satisfactory level of competition without adversely affecting performance requirements or exposing employees to undue hazards from the recovered materials.

Ordering data. Purchasers should select the preferred options permitted here and include the following information in procurement documents:

(a) Title, number, and date of this CID.
(b) Material and finish of hook.
(c) Markings required.
(d) Packaging and packing required.
(e) If Certification of load and finish requirements is acceptable in lieu of actual lot by lot testing.

Notes.

The issues or revisions of ANSI A156.16, ANSI A156.18, and MIL-STD-105 in effect on the date of the invitation for bids or request for quotation shall be used to determine compliance with these requirements.

THE COMMERCIAL ITEM CERTIFICATION CLAUSE IS NOT REQUIRED WHEN THIS COMMERCIAL ITEM DESCRIPTION IS USED FOR PROCUREMENT.
