COMMERCIAL ITEM DESCRIPTION

PILLOW, BED, POLYESTER FIBERFILL (REFLUFFABLE)

The General Services Administration has authorized the use of this commercial item description, for all Federal agencies.

1. SCOPE

1.1 Scope. This commercial item description (CID) covers requirements for a refluffable polyester filled bed pillow.

2. CLASSIFICATION

2.1 Classification. The finished pillow shall be of the following size, as specified (see 7.1).

Size 1 - Standard; 26 inches long by 20 inches wide (66 cm long by 51 cm wide).
Size 2 - Queen; 30 inches long by 20 inches wide (76 cm long by 51 cm wide).

3. SALIENT CHARACTERISTICS.

3.1 Materials.

3.1.1 Polyester fiberfill. The fiberfill shall be specifically designed as a refluffable filling material for sleep pillows and shall be odor free, non-allergenic, non-toxic, first quality, fully guaranteed 100% virgin polyester, 5.5 to 7.0 denier per filament, with a cut length of 3.0 ± 0.5 inches. The fiber shall be crimped with a saw tooth or spiral configuration; shall be made with a hollow core cross section spinneret having one or more holes providing a total target void level of 15 ± 3 percent; shall be slickened with a finish emulating the lubricants on down and feathers; and shall be fully garnetted into one continual piece of batt. The minimum fiberfill weight per finished pillow shall be: size 1, 20 ounces (567 g); size 2, 27 ounces (765.5 g).

3.1.2 Ticking fabric. The ticking fabric shall be an odor free, 50% cotton/50% polyester blend with a crease resistant finish. A ± 5% tolerance shall be permitted for each fiber quantity. The fabric shall be woven closely enough to prevent filling material from migrating out of the pillow and shall be soft and smooth enough to allow the finished pillow to slip easily into an appropriately sized pillow case without dragging or bunching.

3.1.3 Thread. Spun or multi-filament thread of a type appropriate for sleep pillow production and for the ticking shall be used. Thread color shall match the ticking color. The thread shall be durable in appearance and function to the care method appropriate for the finished pillow.

3.2 Dimensions. Length and width measurements shall be determined from end of seam to end of seam on the finished pillow. A ± 1/4 inch (0.6 cm) tolerance shall be permitted in each dimension. Pillow loft, measured with the finished pillow in a relaxed state, shall be 7 to 9 inches (17.9 to 22.9 cm).

Beneficial comments, recommendations, additions, deletions, clarifications, etc. and any data which may improve this document should be sent to: General Services Administration, Engineering Branch (7FXEE), 819 Taylor Street, Fort Worth, TX 76102-6114.

3.3 Construction. The bed pillow shall be rectangular in shape. Ticking edges shall be parallel to the fabric grain and seamed together on the outside of the pillow with overedge stitching, leaving one end open for inserting the fiberfill. The open end shall be closed using the same technique used for sewing the other seams. The stitching shall completely cover all seam edges and prevent any migration of fiberfill to the outside of the pillow. All seams shall be straight and uniform. Seams shall not slip or pull out. All stitching shall be uniform and evenly spaced. All thread ends, when not caught in other seams and stitching, shall be secured to prevent unraveling. The fiberfill shall be evenly distributed inside the ticking.

3.4 Labeling requirements. Each pillow shall have permanent, tear resistant label(s) marked with the following information: National Stock Number (NSN); pillow dimensions; fiber content of the ticking; filling material; care instructions appropriate for the pillow; and a label conforming to the legal requirements of the state of manufacture, if applicable. When allowed under state law, the information required under state regulation may be combined in the identification and care label. Manufacturer's name and trademark may be added to the permanent label(s), at the manufacturer's option. The label(s) shall be sewn into an end seam. Multiple labels shall be layered in one area. All required information shall be completely visible after the label(s) is (are) sewn in. Marking shall be well defined and clearly legible. Label material and marking shall be durable to the care method appropriate for the pillow.

3.5 Workmanship. The finished pillow shall conform to the quality of product established by this commercial item description and shall function as a comfortable, durable sleep pillow. The ticking fabric shall be free from cuts, tears, mends, burns, thread pulls, or other fabric defects. The finished pillow shall be clean, free of objectionable odor, and free of objectionable sound and crackling noise when the head is rested on the pillow. The ticking shall fit smoothly on the finished pillow and shall fit so that the pillow is free to spread as required in use. The ticking shall not be pulled so tightly that the fabric shows evidence of strain or that the stitching breaks or pulls loose. The finished pillow shall be free of any part assembled off grain or not aligned; corners not square; raw edges of any length; needle chews; puckered, twisted, pleated, uneven, or loose seams; or tight stitch tension (breaks when normal strain applied). Stitches shall be secure and uniform. The finished pillow shall be free of filling material on the outside. No defects affecting function, appearance, or serviceability shall be permitted.

3.6 Measurement system. The values stated in inch-pound units are to be regarded as the standard. The metric values stated in parenthesis are for information purposes only.

3.7 Metric products. Products manufactured to metric dimensions will be considered on an equal basis with those manufactured using inch-pound units, providing they fall within the tolerances specified and all other requirements of this document are met. If a product is manufactured to metric dimensions and those dimensions exceed the tolerances specified in the inch-pound units, a request should be made to the contracting officer to determine if the product is acceptable.

4. REGULATORY REQUIREMENTS

4.1 Regulatory requirements. The offeror/contractor is encouraged to use recovered materials to the maximum extent practicable, in accordance with paragraph 23.403 of the Federal Acquisition Regulation (FAR).

5. QUALITY ASSURANCE PROVISIONS

5.1 Product conformance. The products provided shall meet the salient characteristics of this commercial item description, conform to the producer's own drawings, specifications, standards, and quality assurance practices and be the same product offered for sale in the commercial market. The government reserves the right to require proof of such conformance.

6. PACKAGING

6.1 Packaging. Packaging, packing, and marking shall be as specified in the contract or purchase order.

7. NOTES

7.1 Ordering data. Purchaser should select the preferred options permitted herein and include the following information in procurement documents (if applicable).

a) Title, number, and date of this commercial item description.
b) Size (see 2.1).
c) The packaging, packing, and marking desired.

7.2 National Stock Numbers (NSN)s. NSNs 7210-01-395-7921 and 7210-01-430-0529 correspond to this commercial item description. These may not be the only NSNs associated with this commercial item description.
