INTERIM AMENDMENT

MILITARY SPECIFICATION

POWER SUPPLY, TRANSISTORIZED, 12 KILOVOLT

(This interim amendment is issued for use by US Army Electronics Command with MIL-P-45535A (MO), dated 14 May 1964.)

Page 1

2.1 Delete "MIL-R-26474 - Reliability Requirements for Production Ground Electronic Equipment".

Add "MIL-STD-781 - Reliability Test: Exponential Distribution".

Page 2

3.2 Line 3, delete "three" and substitute "ten".

3.9 Delete in its entirety and substitute:

"3.9 Mean time between failure.- The power supply shall have a specified mean time between failure (MTBF) of 2,000 hours."

Page 4

4.5.2.6 Delete in its entirety and substitute:

"4.5.2.6 Mean time between failure.- MTBF testing shall be performed each 30 days on sample power supplies selected at random from the previous 30 day production period. The sample size shall be a minimum quantity of 10. Samples shall be selected from lots which have passed the inspections of 4.5.1 and 4.5.2.4.2. The test shall be conducted in accordance with MIL-STD-781, test level A1, test plan IV. For preproduction testing, no replacements are permitted. For production testing, replacement of failed units is required. The power supplies shall be operated as specified in 4.5.2.4.2 at 70° ± 5°F only. The total number of operating hours for all units, failed and unfailed, original and replacement, shall be monitored and recorded. Once during

each 96 hour period the units shall be inspected. Time to failure for any power supply failing the inspection shall be computed to the beginning of the 96 hour period during which the failure occurred. Failure to obtain the applicable voltage and current specified in Table I (at 70° ± 5°F only) shall constitute failure of the unit."
