"3.4 Generator field rheostats. The generator field rheostats shall be furnished as an item detached from the generator set. The field rheostat shall conform to form P of MIL-R-15109, and shall have a rating compatible with the excitation requirements of the direct-current generator. The rheostat shall have sufficient resistance to reduce the open circuit generator voltage to 50 percent of rated value at rated speed. In addition, at rated speed, the rheostat shall be capable of adjusting generator voltage in steps of not more than 0.5 percent of rated voltage between the limits of 96 to 105 percent of rated voltage, and in steps of not more than 1 percent of rated voltage between the limits of 90 to 96 percent of rated voltage between no load and 125 percent of rated load. The rheostat shall be furnished complete with operating handle and mounting brackets, and shall be suitable for back of switchboard mounting for operation from the front of the switchboard."
