DATA ITEM DESCRIPTION
Title: S1000D DATA MANAGEMENT REQUIREMENT LIST

Number: DI-TMSS-82332
AMSC Number: N1028
DTIC Applicable: N/A
Preparing Activity: SH
Applicable Forms: N/A

Approval Date: 20201116
Limitation: N/A
GIDEP Applicable: N/A
Project Number: TMSS 2020-013

Use/Relationship: The S1000D Data Management Requirement List shall be used to initiate Data Module templates in the Navy's Common Source Database.

This Data Item Description (DID) contains the format and content preparation instructions for the data product generated by the specific and discrete task requirements as delineated in the contract.

This DID is applicable to all new contracts and solicitations that acquire S1000D Issues 4.0 and newer based technical documentation.

The DID may also be applicable to technical documentation already in production for major changes and upgrades.

S1000D, referenced in this Data Item Description, can be obtained at www.s1000d.org.

Requirements:

1. Reference documents. The applicable issue of any documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. Format. The Data Management Requirement List shall be presented in a format similar to that of Figure 1 and shall contain the following columns of information.

3. Content. The content of the columns identified below shall follow the requirements of S1000D. All columns listed below are mandatory. The Learn Code (LCN) and Learn Event Code (LEC) columns are populated when applicable; population of all other columns of information is always mandatory. The columns shall contain the Standard Numbering System breakdown as specified in S1000D. The Data Management Requirement List shall contain all the appropriate Data Modules required to generate the applicable technical documentation.

3.1 Title DMC Column. The text "DMC" shall be entered in the Title DMC column.

3.2 Master Naming scheme (MNS) Column. The Master Naming Scheme shall be specific to NAVSEA's Common Source Database and shall contain Model Identification Code and shall identify the project to which the data applies.

Check the source to verify that this is the current version before use.

3.3 Model Identification Code (MI) Column. The Model Identification Code (MI) identifies the project to which the data applies and shall be the point of reference for all applicability information. The model identification code shall include all related model variants.

3.4 System Difference Code (SDC) Column. The System Difference Code (SDC) indicates alternative versions of the system and subsystem/sub-subsystem identified by the Standard Numbering System without affecting the type, model or variant identity.

3.5 System Code (SC) Column. The System Code (SC) is comprised of the material item category code and a code representing the general systems and the basic structure of the Product. This is the first portion of the Standard Numbering System.

3.6 Subsystem Code (SSC) Column. The Subsystem Code (SSC) is the subsystem portion of the second element of the Standard Numbering System and describes the further breakdown of the system.

3.7 Sub-SubSystem Code (SSSC) Column. The Sub-SubSystem Code (SSSC) is the sub-subsystem portion of the second element of the Standard Numbering System and describes the further breakdown of the system.

3.8 Assy Code (AC) Column. The Assy Code (AC) is the third element of the Standard Numbering System. It provides identification for units in complex systems.

3.9 Disassembly Code (DC) Column. The Disassembly Code (DC) provides the breakdown condition of an assembly to which maintenance information applies.

3.10 Disassembly Code Variant (DCV) Column. The Disassembly Code Variant (DCV) designates alternative items of equipment or components differing slightly in design but not enough to warrant a change of the system difference code.

3.11 Information Code (IC) Column. The Information Code (IC) identifies the type of information within a data module.

3.12 Information Code Variant (ICV) Column. The Information Code Variant (ICV) refines the Information Code to be more specific.

3.13 Item Location Code (ILC) Column. The Item Location Code (ILC) identifies where the maintenance task will be performed in relation to the equipment/system.

3.14 Learn Code (LCN) Column. The Learn Code (LCN) describes the type of human performance technology or training information that is in the content of the data module.

Check the source to verify that this is the current version before use.

3.15 Learn Event Code (LEC) Column. The Learn Event Code (LEC) identifies which branch of the learn Schema is being used.

3.16 Techname Column. The Techname identifies the nomenclature of the hardware or function.

3.17 Infoname Column. The Infoname contains the short description of the information code.

3.18 Type Column. The Type indicates the data module type to NAVSEA's Common Source Database. This column shall be populated with selections from Table 1. Before using a schema, check the NAVSEA S1000D Tagging and Authoring Guide to ensure that it is supported. The Tagging and Authoring Guidelines can be obtained from https://www.navsea.navy.mil/Home/Warfare-Centers/NSWC-Carderock/Resources/Technical-Information-Systems/Navy-XML-SGML-Repository/DTDs-Schemas/NAVSEA-S1000D-Tools-Repository/.

4. Media Requirement. The Data Management Requirement List shall be presented in an electronic file ASCII, comma-delimited file.

	A	B	C	D	E	F	G	H	I	J
1	Title DMC	Master Naming scheme (MNS)	Model Identification Code (MI)	System Difference Code (SDC)	System Code (SC)	Subsystem Code (SSC)	SubSubSystem Code (SSSC)	Assy Code (AC)	Disassembly Code (DC)	Disassembly Code Variant (DCV)
2	DMC	NAVSEA	NAVSEA	S1KD	HR0	1	0	0000	00	AAA

	K	L	M	N	O	P	Q	R
1	Information Code (IC)	Information Code Variant (ICV)	Item Location Code (ILC)	Learn Code (LCN)	Learn Event Code (LEC)	Techname	Infoname	Type
2	952	A	T	T40	A	Plan	Generic learning content - Content	learning

Table 1. Data Module Type Table

Data Module Type	Data Module Type Description
appliccrossreftable	The appliccrossreftable Module type designates an applicability cross-reference table Data Module.
brdoc	The brdoc Module type designates a Business Rules document Data Module.
brex	The brex Module type designates a BREX Data Module.
checklist	The checklist Module type designates a checklist Data Module.
comment	The comment Module type designates a comment Data Module.
comrep	The comrep Module type designates a common repository Data Module. In S1000D Issues prior to 4.1, the Module type will be techrep, designating a technical repository Data Module.
condcrossreftable	The condcrossreftable Module type designates a conditions cross-reference table Data Module.
container	The container Module type designates a container Data Module.
crew	The crew Module type designates a crew Data Module.
ddn	The ddn Module type designates a data dispatch note Data Module.
descript	The descript Module type designates a descriptive Data Module.
dml	The dml Module type designates a data management list Data Module.
fault	The fault Module type designates a fault Data Module.
frontmatter	The front matter Module type designates a front matter Data Module.
ipd	The ipd Module type designates an illustrated parts Data Module.
learning	The learning Module type designates a learning data module.
prdcrossreftable	The prdcrossreftable Module type designates a products cross-reference table Data Module.
proced	The proced Module type designates a procedural Data Module.
process	The process Module type designates a process Data Module.
sb	The sb Module type designates a service bulletin Data Module.
schedul	The schedul Module type designates a schedule Data Module.
scocontent	The scocontent Module type designates an SCO content Data Module.
scormcontentpackage	The scormcontentpackage Module type designates a SCORM content package module.
update	The update Module type designates an update data module.
wrngdata	The wrngdata Module type designates a wiring diagram data Data Module.
wrngflds	wrngflds. The wrngflds Module type designates a wiring field Data Module.

End of DI-TMSS-82332
