MIL-F-3501C

16 June 1971
SUPERSEDING
MIL-F-3501B
7 October 1966

MILITARY SPECIFICATION

FRY MIX, BREADING AND BATTER

This specification is mandatory for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

* 1.1 This specification covers prepared breading and batter mixes to be used as a breading or batter for deep-fat frying of foods for the Armed Forces.

* 1.2 Classification.- The product shall be of the following types, as specified (see 6.1):

Types

I	-	Fry Mix - Breading and Batter
II	-	Cornflake crumbs - Breading
III	-	Bread Crumbs - Breading

2. APPLICABLE DOCUMENTS

* 2.1 The following documents, of the issue in effect on date of invitation for bids or request for proposal, form a part of this specification to the extent specified herein:

SPECIFICATIONS

FEDERAL

UU-S-48	-	Sacks, Shipping, Paper.
PPP-B-35	-	Bags, Textile, Shipping, Burlap, Cotton and Waterproof Laminated.
PPP-B-636	-	Box, Fiberboard.

FSC 8920

MILITARY

MIL-L-10547 - Liners, Case and Sheet, Overwrap; Water-Vaporproof or Waterproof, Flexible.
MIL-T-21330 - Treatment: Insert Resistant, For Paper.
MIL-L-35078 - Loads, Unit; Preparation of Nonperishable Subsistence.

STANDARDS

FEDERAL

FED-STD-101 - Preservation, Packaging and Packing Materials: Test Procedures.

MILITARY

MIL-STD-105 - Sampling Procedures and Tables for Inspection by Attributes.
MIL-STD-129 - Marking for Shipment and Storage.
MIL-STD-668 - Sanitary Standards for Food Plants.

(Copies of specifications and standards required by suppliers in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

* 2.2 Other publications.- The following documents form a part of this specification to the extent specified herein. Unless otherwise indicated, the issue in effect on date of inviation for bids or request for proposal shall apply.

U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Federal Food, Drug, and Cosmetic Act and Regulations Promulgated Thereunder.

(Application for copies should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.)

U.S. DEPARTMENT OF AGRICULTURE

Regulations Governing the Grading and Inspection of Egg Products.

(Application for copies should be addressed to the U.S. Department of Agriculture, Consumer and Marketing Service, Poultry Division, Washington, D.C. 20250.)

U. S. Standards for Grades of Nonfat Dry Milk (spray dried).

U.S. Standards for Grades of Dry Whey.

(Application for copies should be addressed to the U. S. Department of Agriculture, Consumer and Marketing Service, Dairy Division, Federal Central Bldg. Hyattsville, Maryland 20781.)

ASSOCIATION OF OFFICIAL ANALYTICAL CHEMISTS

Official Methods of Analysis of the Association of Official Analytical Chemists

(Application for copies should be addressed to the Association of Official Analytical Chemists, Box 540, Benjamin Franklin Station, Washington, D. C. 20044.)

NATIONAL MOTOR FREIGHT TRAFFIC ASSOCIATION, INC.

National Motor Freight Classification

(Application for copies should be addressed to American Trucking Associations, ATTN: Tariff Order Section, 1616 P Street, N.W., Washington, D.C. 20036.)

UNIFORM FREIGHT CLASSIFICATION COMMITTEE

Uniform Freight Classification

(Application for copies should be addressed to the Uniform Classification Committee, Room 202 Union Station, 516 W. Jackson Boulevard, Chicago, Illinois 60606.)

3. REQUIREMENTS

3.1 Material.- All materials shall be of good quality. They shall be clean, sound, wholesome, and free from evidence of insect infestation or any other objectionable foreign matter.

* 3.1.1 Nonfat dry milk.- Nonfat dry milk shall meet the requirements for extra grade as defined in U. S. Standards for Grades of Nonfat Dry Milk (spray dried) and shall be certified as Salmonella negative.

* 3.1.2 Dehydrated egg products.- The dehydrated egg products shall have been produced and handled in compliance with requirements set forth in the USDA Regulations Governing the Grading and Inspection of Egg Products. They shall be prepared under continuous inspection of the USDA and shall bear the inspection shield mark. Egg products shall have been laboratory tested and certified Salmonella negative by the USDA.

3.1.3 Salt.- Salt shall be white, refined sodium chloride with or without anticaking agent. Iodized salt shall not be used.

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

* 3.1.4 Cereal ingredients.- Cereal ingredients shall be degerminated or defatted, and shall be finely ground, except that the oat flour shall be made by processing the whole groats into a finely ground flour.

* 3.1.5 Dry whey.- Dry whey shall meet the requirements for Extra Grade as defined in U.S. Standards for Dry Whey.

* 3.2 Finished product.- The finished product shall be composed as follows.

* 3.2.1 Type I, fry mix.- Type I shall be composed of one or a combination of two or more of the following cereal products: wheat flour, corn flour, soya flour, oat flour, potato flour, corn flake crumbs, bread crumbs, and one or a combination of two or more of the following: nonfat dry milk, dry whey, sodium caseinate, dehydrated whole eggs, dehydrated egg yolks and dehydrated egg albumen; and shall be seasoned with salt. It shall be of uniform composition, free flowing, and shall be free from objectionable odors and foreign materials. The moisture content shall be not more than 9.0 percent.

3.2.2 Type II, cornflake crumbs.- Cornflake crumbs shall be of uniform composition, free flowing and shall be free from objectionable odors, flavors and foreign materials. The moisture content of the product shall be not more than 6.0 percent. Cornflake crumbs shall be milled and screened so that not more than 3.0 percent by weight shall remain on a U.S. Standard No. 10 woven-wire cloth sieve, not more than 40.0 percent by weight shall remain on a U.S. Standard No. 14 woven-wire cloth sieve and not more than 8.0 percent by weight shall pass through a U.S. Standard No. 80 woven-wire cloth sieve.

3.2.3 Type III, bread crumbs.- Type III bread crumbs shall be prepared from fresh, white bread (or dough, using the extrusion method) which shall be devoid of sesame, poppy, caraway or any other seeds. The product shall be free-flowing, of uniform compositions and shall be free from objectionable odors, flavors and foreign materials. The moisture content of the product shall be not more than 8.0 percent. In addition, the bread crumbs shall be milled and screened so that not more than 2 percent shall remain s U.S. Standard No. 8 woven-wire cloth sieve and not less than 75.0 percent shall remain on a U.S. Standard No. 20 and No. 30 woven-wire cloth sieve, not less than 15.0 percent shall remain on U.S. Standard No. 40 woven-wire cloth sieve.

3.3 Performance evaluation.- When examined as specified in 4.4.1.1 and 4.4.1.2, type I product, either dry or prepared as a batter, shall adhere to moist foods. When prepared as a batter, the product shall be smooth, free-flowing, free from lumps, and it shall have a uniform color with no burned specks. There shall be no separation of the coating layer either after frying or after application of slight pressure with a fork. The texture of the cooked coating shall be crisp and it shall not be hard, tough, crumbly, gritty, soggy or lumpy. The product shall be free from objectionable flavor or odor.

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

3.4 All deliveries shall conform in every respect to the provisions of the Federal Food, Drug, and Cosmetic Act and regulations promulgated thereunder.

* 3.5 Workmanship.- The product shall be prepared, processed and packaged under modern sanitary conditions and in accordance with good commercial practice. The product shall be processed in establishments meeting the requirements of MIL-STD-668.

* 4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection.- Unless otherwise specified in the contract or purchase order, the supplier is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified, the supplier may use his own or any other inspection facilities and services acceptable to the Government. The Government reserves the right to perform any of the inspections set forth in this specification where such inspections are deemed necessary to assure that supplies and services conform to prescribed requirements.

4.2 Preacceptance inspection.- The product shall be rejected if produced in plants not meeting the requirements of MIL-STD-668.

4.3 Inspection.- Sampling for inspection shall be performed in accordance with MIL-STD-105, except where otherwise indicated hereinafter.

4.3.1 Component and material inspection.- In accordance with 4.1 above, components and materials required to be in accordance with subsidiary specifications shall be inspected in accordance with all the requirements of referenced specifications, drawings and standards, unless otherwise excluded, amended, modified, or qualified in this specification or applicable purchase document.

4.3.1.1 Examination of ingredients.- Conformance of ingredients to requirements as concerns identity (kind, origin USDA inspection and marking, USDA Salmonella negative certification of product), shall be ascertained by a review of labels, invoices, or other valid documents. In addition, each ingredient shall be examined organoleptically as necessary to determine conformance to condition requirements as contained in 3.1. The sample unit for examination shall be 8 ounces from a primary container. Five primary containers shall be sampled (or all containers if less than 5 form a lot). Any nonconformance to a condition or identity requirement shall indicate an unacceptable ingredient and use of such shall be cause for rejection of the involved quantity of finished product.

4.3.1.2 Testing of paper.- Basis weight of paper and weight of waxed glassine paper shall be ascertained to determine conformance to 5.1.2.1 and 5.1.2.2, respectively. Test procedures shall be in accordance with 4.4. The sample unit shall be 1 packet or 1 bag or liner. The sample size for

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

each of the components shall be the number of sample units indicated by inspection level S-1. Lot size shall be expressed in terms of the sample unit. Test requirements shall be average requirements. Results shall be reported to the nearest 0.1 lb/ream. A test failure shall be indicated as unacceptable component and use of such shall be cause for rejection of the involved end item.

4.3.2 Process examination.- Examination shall be performed during formulation to determine conformance to 3.2, as concerns kinds of ingredients being utilized in production. Formulation records shall be maintained. Any nonconformance shall be cause for rejection of the involved finished product.

4.3.3 Examination of end item.- Examination shall be in accordance with tables II through IV, 4.3.3.1 through 4.3.3.5. The sampling plans and acceptable quality levels (AQLs) for the tables shall be as shown in table I. The acceptable quality levels (AQLs) shall be expressed as percent defective for table III and defects per hundred units for tables II and IV.

TABLE I.- Sampling plans and AQLs

Table	Inspection level	Sample unit	Expression lot size	AQLs	
				Major	Minor
II 1/	S-1	1 filled and closed primary container	Primary containers	1.5	4.0
III	S-3	One filled primary container	Primary containers	--	2.5
IV	S-2	1 pound from a primary container	Primary containers	1.5	--

1/ Not applicable to level B pack.

Check the source to verify that this is the current version before use.

TABLE IV.- Examination for product characteristics

Category	Defect
Major	
	Dry product 1/
101	Not uniform in composition.
102	Not free-flowing.
103	Particle size not as required. 2/
104	Objectionable odor; or objectionable flavor (except type I).
105	Fry mix does not adhere to moist fish, shrimp or other seafood (determination shall be performed on one piece of fish, shrimp or other seafood).
	Fry mix - Batter 3/
106	Not free-flowing, or not smooth and free from lumps.
107	Not uniform color.
108	Not free of burnt specks.
109	Does not adhere to moist fish, shrimp or other seafood (determination shall be performed on one piece of fish, shrimp or other seafood).
	Fried product, (type I) 4/
110	Separation of coating from shrimp, fish or other seafood (by itself or light pressure with fork).
111	Coating not crisp or is hard, tough, gritty, crumbly or lumpy.
112	Coating has objectionable flavor or odor.

1/ Presence of any foreign material (e.g., glass, metal, filth, insects, etc.) shall be cause for rejection of the lot.

2/ See 4.4 for procedure. Make one determination per sample unit.

3/ Prepare in accordance with 4.4.1.2. Make one determination per sample unit.

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

4/ Fry mix (dry and batter) shall be applied separately to approximately 1/4 pound of shrimp or cut pieces of fish or other seafood and shall be prepared and fried in accordance with 4.4.1.1 and 4.4.1.2, respectively.

4.3.3.1 Examination of shipping sacks.- Examination of the filled and closed sacks shall be in accordance with the quality assurance provisions in the appendix of UU-S-48. In addition, the following defects shall be included in the examination: (1) "Contractual" markings missing, incorrect or illegible, (2) Sack damaged (e.g., tear, hole, broken stitches, etc.) adversely affecting serviceability. For level C sacks only, the aforementioned defects pertaining to marking and sack damage shall apply. In addition, IRT sacks shall not be acceptable in the event the date of fabrication of the sacks indicate the sacks will be more than 60 days old at the time of shipment of the product.

4.3.3.2 Examination of intermediate fiberboard containers.- The filled closed intermediate containers shall be examined in accordance with the quality assurance provisions in the appendix of PPP-B-636. In addition, the following defects shall be included in the examination: Major - containers not closed by tape or glue; Major - required markings missing, incorrect or illegible; Minor - markings indicate a total net weight of more than fifty pounds.

4.3.3.3 Examination of fiberboard shipping container.- Examination of the filled and closed containers shall be in accordance with the quality assurance provisions in the appendix of PPP-B-636. In addition, the following defects shall be included in the examination: Major - Markings, missing, incorrect or illegible; Major - Chipboard pad(s) or pressure sensitive tape, when required, not completely covering metal stitches on interior of shipping container.

4.3.3.4 Examination of case liners.- The filled and closed waterproof case liners shall be examined in accordance with the quality assurance provisions in the appendix of MIL-L-10547.

4.3.3.5 Examination of unit loads.- Unit loads shall be examined in accordance with the quality assurance provisions of MIL-L-35078.

4.3.4 Testing of finished product.- Procedures for testing for moisture shall be in accordance with 4.4.2.1. The sample for testing shall be a 1/2-pound composite derived from the number of primary containers indicated by inspection level S-2. Lot size shall be expressed in terms of primary containers. Test results shall be reported to the nearest 0.1 percent. Nonconformance shall be cause for rejection of the lot.

4.4 Test methods.- Examination and test procedures which differ from those specified herein, unless otherwise excepted, may be used by the supplier if they provide a quality assurance equivalent to that specified. If the Government contracting officer determines that such procedures and controls do not

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

provide, as a minimum such quality assurance, the supplier will use the procedures set forth herein. In case of dispute as to examination or test results, the procedures specified herein will govern.

4.4.1 Examination procedures.-

4.4.1.1 Breading.- (No alternative procedure permitted). Cleaned, raw, chilled fish or shrimp (medium size or larger), or equivalent size pieces of other seafood, shall be completely coated with fry mix using no additional ingredients and shall be submerged in a fat at a temperature of 350°F. for 2 to 3 minutes.

4.4.1.2 Batter.- (No alternative procedure permitted). One hundred grams of fry mix shall be mixed manually with fork or spoon for a maximum of 90 seconds with 125 to 175 ml. of water at a temperature not higher than 80°F. Chilled fish or shrimp (medium size or larger), or equivalent size pieces of other seafood, dipped in the batter, shall be submerged in fat at a temperature of 350°F. for 2 to 3 minutes.

4.4.1.3 Particle size.- Particle size shall be determined for type II and type III. The sieving shall be made on the basis of a representative portion of 100 gm taken from the original sample. U.S. Standard woven-wire cloth sieves which are 8 inches in diameter and have full height frames shall be used in the examination. The sieving procedure shall be as described in 4.4.1.3.1.

4.4.1.3.1 Sieving procedure.- Fit an appropriate sieve as specified in 3.2.2 and 3.2.3. Place a 100-gram sample in the specified sieve, including cover and catch pan. With the left hand, hold the sieve assembly at an angle of about 30 degrees from the horizontal so that the upper edge of the tilted plane is towards the right hand. Shake by striking the right side of the sieve assembly with a short sharp stroke with the right hand moving in a horizontal plane. Strike at the rate of about 150 times per minute. After each 25 strokes, turn the sieve assembly 1/6 of a revolution in the same direction. Continue shaking for 2 minutes. Weigh and calculate the percentage of the material which passes through the sieve. (NOTE: Sieves may close up because of moisture and oil conditions. In cases such as these, a hairbrush may be used to break the bridging effect.)

4.4.2 Test procedures.-

4.4.2.1 Moisture determination.- Moisture of the finished product shall be determined by the method specified in Official Methods of Analysis of the Association of Official Analytical Chemists, chapter: Eggs and Egg Products, section: Total Solids.

4.4.2.2 Paper test.- Basis weight of paper shall be determined in accordance with Method 5022 of FED-STD-101.

Check the source to verify that this is the current version before use.

* 5. PREPARATION FOR DELIVERY

5.1 Packaging.- The type of product specified shall be packaged in accordance with level A, B, or C, as specified (see 6.1).

5.1.1 Level A.- Five, 10, or 50 pounds of product, as specified (see 6.1), shall be packaged in a textile bag, constructed and closed in accordance with type IV, style A, of PPP-B-35.

5.1.2 Level B.- The product shall be packaged in accordance with 5.1.2.1 or 5.1.2.2, as specified (see 6.1).

5.1.2.1 Paper pockets.- Five or 10 pounds of the product, as specified (see 6.1), shall be packaged in a paper pocket as specified below. The paper used for the pocket shall be heavy duty kraft. When extensible papers are used, a basis weight equal to 90 percent of the specified basis weight is acceptable. The paper pocket shall have a sift-proof closure.

Net weight of contents (pounds	*Basis weight* 1/	
	Inner ply	Outer ply
5	50	60
10	60	60

1/ Minus 5 percent, no upper limit.

5.1.2.2 Cartons.- Five pounds of the product shall be packaged in a rectangular, sealed-end carton. Each carton shall be furnished with an interior bag or liner constructed from 35 pounds per ream ± 5 percent (24 by 36-500) waxed glassine.

5.1.3 Level C.- The product shall be packaged to assure protection from deterioration or damage during shipment from the supply source to the first receiving activity. The supplier may use his standard practice when it meets this requirement.

5.2 Packing.- The product shall be packed in accordance with level A, B, or C, as specified (see 6.1 and 6.2).

5.2.1 Level A.- The product shall be packed in accordance with 5.2.1.1 or 5.2.1.2, as applicable.

5.2.1.1 Textile bags.- Ten 5-pound bags, five 10-pound bags, or one 50-pound bag of the product shall be packed in a multiwall paper shipping sack, fabricated and closed in accordance with type I, class 2, style B, or type II, style A,

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

construction 9 or 9X, MB grade 2, of UU-S-48. The outer surface of the sack shall be insect-resistant treated in accordance with MIL-T-21330.

5.2.1.2 Cartons.- Not more than 50 pounds of the product in cartons shall be packed in a snugfitting, intermediate, fiberboard box, constructed in accordance with style RSC, type CF, class domestic, grade 275, of PPP-B-636, and closed by gluing or taping. The intermediate container shall be placed in a waterproof case liner, fabricated and sealed in accordance with MIL-L-10547 for subsistence items. The filled and sealed intermediate container inclosed in the waterproof case liner, shall be overpacked in a snugfitting fiberboard box, constructed, closed and reinforced in accordance with style RSC, V2s of PPP-B-636. If the flaps of the shipping container are closed by stitching, the case liner shall be protected from the stitches by placing a chipboard pad between the stitches and the case liner. The case liner shall be protected from stitches in the manufacturer's joint by placing a piece of pressure-sensitive tape or a chipboard corner pad over the stitches.

5.2.2 Level B.- The product shall be packed in accordance with 5.2.2.1 or 5.2.2.2, as applicable.

5.2.2.1 Paper pockets and bulk.- Ten 5-pound, five 10-pound paper pockets, or 50 pounds bulk of the product shall be packed in a multiwall paper shipping sack fabricated and closed in accordance with type I, class 2, style B, or type II, class A, construction 5 or 5X, MB grade 1, of UU-S-48. The outer surface of the sack, shall be insect-resistant treated in accordance with MIL-T-21330.

5.2.2.2 Cartons.- Not more than 50 pounds of the product in cartons shall be packed in an intermediate fiberboard box and waterproof case liner as specified in 5.2.1.2. The filled and sealed intermediate container inclosed in the waterproof case liner shall be packed in a snugfitting fiberboard box, constructed, closed, and reinforced in accordance with style RSC, V3c, or V3s, or V4s of PPP-B-636. The case liner shall be protected from stitches as specified in 5.2.1.2.

5.2.2.2.1 When specified (see 6.1 and 6.3), the shipping container specified in 5.2.2.2 shall be reinforced with nonmetallic strapping or pressure-sensitive adhesive, filament-reinforced tape in accordance with the appendix of PPP-B-636.

5.2.3 Level C.- The product shall be packed in accordance with 5.2.3.1, 5.2.3.2, or 5.2.3.3.

5.2.3.1 Paper pockets and bulk.- Ten 5-pound or five 10-pound paper pockets of product, packaged as specified in 5.1.3, or 50 pounds of bulk product shall be packed in accordance with the level C requirements of UU-S-48.

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

5.2.3.2 Cartons.- Not more than 50 pounds of product packaged in cartons shall be packed in a snugfitting fiberboard box, constructed and closed in accordance with style RSC, type CF or SF, class domestic, grade 275, Method II closure, of PPP-B-636.

5.2.3.3 When specified (see 6.1 and 6.4), the product shall be packed in accordance with Uniform Freight Classification Rules or National Motor Freight Classification Rules, as applicable.

5.3 When specified (see 6.1), the product, packed as specified in 5.2, shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified.

5.4 Labeling and marking.-

5.4.1 Interior bags and pockets and cartons.- Labeling that complies with the Federal Food, Drug, and Cosmetic Act and regulations promulgated thereunder is acceptable. Labeling shall include both the numerical and title designation of the type of product.

5.4.2 Shipping containers.- Shipping containers shall be marked in accordance with MIL-STD-129 and UU-S-48, as applicable.

5.4.3 Unit loads.- Unit loads shall be marked in accordance with MIL-L-35078.

6. NOTES

6.1 Ordering data.- Procurement documents should specify the following:

(a) Title, number and date of this specification.
(b) Type of product required (see 1.2).
(c) Type and size of packaging required (see 5.1).
(d) Levels of packaging and packing required (see 5.1 and 5.2).
(e) When packing specified in 5.2.2.2.1 and 5.2.3.3 is required (see 6.3 and 6.4).
(f) Type and class of unit load when unit loading is specified (see 5.3).

6.2 Based on conditions known or expected to be encountered during shipment, handling, and storage of the specific item being procured, the contracting officer should select the appropriate level of pack in accordance with the criteria established in AR 700-15.

6.3 Packing specified in 5.2.2.2.1 is intended for transfer at sea operations or specific Navy overseas operations.

Source: https://assist.dla.mil -- Downloaded: 2026-10-16T18:07Z
Check the source to verify that this is the current version before use.

6.4 Packing specified in 5.2.3.3 is intended for direct shipment from the supply source to the first receiving activity for immediate use within CONUS.

6.5 The margins of this specification are marked with an asterisk to indicate where changes (additions, modifications, corrections, deletions) from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and suppliers are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous issue.
