NOT MEASUREMENT SENSITIVE

MIL-W-6858D
AMENDMENT 1
6 November 1992

MILITARY SPECIFICATION

WELDING, RESISTANCE: SPOT AND SEAM

This amendment forms a part of MIL-W-6858D, dated 28 March 1978, and is approved for use by all Departments and Agencies of the Department of Defense.

PAGE 13

3.4.1: Delete and substitute:

"3.4.1 Qualification approval. Qualification is performed on a distinctive resistance spot or seam welding machine to determine the ability and consistency of operation of a machine type at a facility. Qualification has as a purpose to identify and verify the range of welding that a facility may, for contractual purposes, be considered capable. To have his equipment qualified and approved for use, the contractor shall perform the tests specified herein under the surveillance of his quality assurance department. Weld conditions shall be documented on a Machine Qualification Test Report. Typical examples of report forms are given in AWS C1-1. Such forms may be modified or expanded as required. Weld conditions and test results shall be submitted with an application for approval to the procuring activity. After approval is indicated, these reports shall be posted near the machine so as to be available to contractor operators and inspectors, and agents of the procuring activity."
