INCH-POUND

MIL-T-44047E
26 June 1991
SUPERSEDING
MIL-T-44047D
14 August 1990

MILITARY SPECIFICATION

TROUSERS, CAMOUFLAGE PATTERN, COMBAT

This specification is approved for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers camouflage pattern combat trousers.

* 1.2 Classification. The trousers shall be of the following types and sizes as specified (see 6.2):

Type I - Woodland camouflage pattern, cotton/nylon twill cloth
Type II - Deleted (see 6.8)
Type III - Woodland camouflage pattern, cotton poplin cloth
Type IV - Desert camouflage pattern (3 color) cotton/nylon twill cloth
Type V - Desert camouflage pattern (3 color) cotton poplin cloth

Schedule of sizes

X-Small	Small	Medium	Large	X-Large
X-Short	X-Short	X-Short	--	--
Short	Short	Short	Short	Short
Regular	Regular	Regular	Regular	Regular
Long	Long	Long	Long	Long
--	X-Long	X-Long	X-Long	--

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be used in improving this document should be addressed to: U.S. Army Natick Research, Development, and Engineering Center, Natick, MA 01760-5019 by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specifications, standards and handbooks. The following specifications, standards and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those listed in the issue of the Department of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation (see 6.2).

SPECIFICATIONS

FEDERAL

A-A-50083	-	Bag, Plastic, Folded Garment
A-A-50198	-	Thread, Gimp, Cotton, Buttonhole
A-A-50199	-	Thread, Polyester Core, Cotton- or Polyester-Covered
V-B-871	-	Button, Sewing Hole, and Button, Staple, (Plastic)
V-T-285	-	Thread, Polyester
DDD-L-20	-	Label: For Clothing, Equipage, and Tentage (General Use)
PPP-B-636	-	Boxes, Shipping, Fiberboard

MILITARY

MIL-B-543	-	Buckles, Tongueless and Web Strap
MIL-T-5038	-	Tape, Textile and Webbing, Textile, Reinforcing, Nylon
MIL-L-35078	-	Loads, Unit: Preparation of Semiperishable Subsistence Items; Clothing, Personal Equipment and Equipage; General Specification For
MIL-C-43468	-	Cloth, Camouflage Pattern, Wind Resistant Poplin, Cotton
MIL-T-43566	-	Tape, Textile, Cotton or Polyester, General Purpose, Natural or in Colors
MIL-C-44031	-	Cloth, Camouflage Pattern: Woodland, Cotton and Nylon
MIL-C-44034	-	Cloth, Twill, Camouflage Pattern, Cotton and Nylon for Desert Uniform
MIL-C-44296	-	Cloth, Fusibles

STANDARDS

MIL-STD-1488	-	Provisions for Evaluating Quality of Trousers

(Unless otherwise indicated, copies of federal and military specifications, standards and handbooks are available from the Standardization Documents Order Desk, Building 4D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

2.2 Non-Government publications. The following documents form a part of this document to the extent specified herein. Unless otherwise specified, the issues of the documents which are DOD adopted are those listed in the issue of the DODISS cited in the solicitation. Unless otherwise specified, the issues of documents not listed in the DODISS are the issues of the documents cited in the solicitation (see 6.2).

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

D 3951 - Standard Practice for Commercial Packaging

(Application for copies should be addressed to the American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103-1187.)

(Non-Government standards and other publications are normally available from organizations that prepare or distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 First article. When specified (see 6.2), a sample shall be subjected to first article inspection (see 6.3) in accordance with 4.3.

3.2 Guide sample. Samples, when furnished, are solely for guidance and information to the contractor (see 6.4). Variation from this specification may appear in the sample, in which case this specification shall govern.

3.3 Materials. It is encouraged that recycled material be used when practical as long as it meets the requirements of this specification.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

3.3.1 Basic material.

3.3.1.1 Type I trousers. The basic material shall be cotton/nylon twill cloth printed in a woodland camouflage pattern conforming to class 1 of MIL-C-44031.

3.3.1.2 Type III trousers. The basic material shall be cotton poplin printed in a woodland camouflage pattern conforming to type III of MIL-C-43468.

* 3.3.1.3 Type IV trousers. The basic material shall be cotton/nylon twill cloth printed in a desert camouflage pattern (3 color) conforming to class 3 of MIL-C-44034.

* 3.3.1.4 Type V trousers. The basic material shall be cotton poplin printed in a desert camouflage pattern (3 color) conforming to type V of MIL-C-43468.

* 3.3.2 Cloth, side and hip hanging pockets, waistband lining, right fly lining, left fly, cargo pocket facing and protective flap (type III) only. The cloth for side and hip hanging pockets, waistband lining, right fly lining, left fly (buttonhole fly and lining), cargo pocket facings and protective flap (type III only) shall be basic material, ground shade cloth, or printed seconds cloth. The ground shade cloth shall be dyed conforming to class 1 of MIL-C-44031 for type I trousers, type III of MIL-C-43468 for type III trousers, class 3 of MIL-C-44034 for type IV trousers and type V of MIL-C-43468 for type V trousers prior to overprinting of the respective camouflage patterns. The ground shade cloth shall meet the respective finished fabric's physical, mechanical, and dimensional requirements. Printed seconds shall be cloth which has been rejected only for defects pertaining to color, infrared reflectance, or camouflage printed patterns, as specified in MIL-C-44031 for type I trousers, MIL-C-43468 for types III and type V trousers and MIL-C-44034 for type IV trousers.

3.3.3 Cloth, fusible, interlining pocket flaps. The material for interlining the pocket flaps of the type I, III and V trousers shall conform to bonding strength and type V, class 3, adhesive dot application style B of MIL-C-44296.

3.3.3.1 Fusing press operating procedure and conditions. Fuse a single layer of fusible interlining to a single layer of basic material on a dry electrically heated fusing press which has the capacity of controlling and retaining pressure, dwell time, and temperature for a minimum of 8 hours. Pair or sandwich fusing which can create differential shrinkage, and uneven bonding shall not be permitted. A steam sourced fusing press shall not be allowed for any initial fusing operations. For optimum results, the fusible material manufacturers recommendations for fusing dwell time, pressure, and temperature, based upon the fusing equipment used and basic material being fused, shall be utilized. The temperature used in fusing shall not exceed

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

340°F and shall not cause an objectionable color change or staining of the basic fabric. Basic preproduction and production maintenance procedures, including a fusing press information chart, shall be required to ensure proper fusing press performance relative to temperature control, evenness in pressure head or roller contact, dwell time, cleanliness, and bonding strength. The fusing process will be controlled to assure that the fused plies of material show no sign of bubbling or delamination initially or after 3 launderings when tested as specified in 4.4.3.4. Results of the production maintenance procedures shall be recorded on figure 2.

3.3.4 Tape, textile, cotton. The tapes for the adjustment straps shall be 5/8 inch wide, Camouflage Green 483 for type I and III trousers and dyed Tan 380 for types IV and V trousers, conforming to type I, class 3 of MIL-T-43566, except that the colorfastness to crocking and accelerated weathering shall not apply.

3.3.5 Tape, textile, nylon. The tapes for the leg bottoms shall be 3/8 inch wide, dyed Camouflage Green 483 for type I and III trousers and Tan 380 for types IV and V trousers conforming to type III of MIL-T-5038, except that the physical requirements for lateral curvature shall not apply.

3.3.6 Buttons. The buttons shall conform to type II, class D, style 26, 30-line of V-B-871. The buttons shall have a dull finish and the color shall be shade Olive Green BP Cable 62016 for type I and III trousers and Tan AJ Cable 62028 for types IV and V trousers.

3.3.7 Thread and gimp.

3.3.7.1 Thread. The thread for seaming and stitching the trousers shall be polyester- or cotton-covered polyester core thread, ticket Nos. 30, 2 or 3 ply; 50, 2 ply; or 70, 2 ply conforming to A-A-50199. The color shall be Camouflage Green 483 approximating Color Chip 34094 of FED-STD-595 for type I and III trousers and Khaki P-1 C.A. 66019 for types IV and V trousers. As an alternate, polyester thread conforming to type IV or V of V-T-285, size 40 may be substituted for sizes 50 and 70 of A-A-50199 thread and size 60 may be substituted for size 30 of A-A-50199.

3.3.7.2 Gimp. The cotton gimp for reinforcing buttonholes shall conform to type I or II, ticket number 8 of A-A-50198. The color of the gimp shall be Camouflage Green 483 approximating Color Chip 34094 of FED-STD-595 for types I and III and Khaki P-1, Cable No. 66019 for types IV and V.

3.3.7.3 Colorfastness. The dyed thread and gimp shall show fastness to laundering equal to or better than the standard sample. When no standard sample is available, the dyed thread and gimp shall show "good" fastness to laundering.

Check the source to verify that this is the current version before use.

* 3.3.8 Labels. Each trouser shall have a size label, and an identification label and an instruction label or a combination identification and instruction label conforming to type VI of DDD-L-20. The labels shall show fastness to laundering. The following cable numbers of the Standard Color Card of America are furnished for information and guidance as to the intensity of the shade desired for the labels. The label color for types I and III shall be medium green, Cable No. 70034, 70130 or 70131 and for types IV and V trousers shall be Khaki, Cable No. 70188.

3.3.8.1 Size label. The size label shall conform to class 2, containing the following information for each respective size. Descriptive information shall be printed in letters and numerals not less than a minimum of 10 points.

3.3.8.2 Identification label. The identification label shall conform to class 1.

* 3.3.8.3 Instruction label. The instruction label for type I trousers shall be titled: TROUSERS, WOODLAND CAMOUFLAGE PATTERN; COMBAT; type III trousers shall be titled: TROUSERS, HOT WEATHER, WOODLAND CAMOUFLAGE PATTERN; COMBAT; type IV trousers shall be titled: TROUSERS, DESERT CAMOUFLAGE PATTERN (3 COLOR), COMBAT; and type V trousers shall be titled: TROUSERS, HOT WEATHER, DESERT CAMOUFLAGE PATTERN (3 COLOR), COMBAT. The label for all four types of trousers shall conform to class 3, containing the following information:

1. Adjust waist size by straps on waistband.

2. Blouse trouser outside of boots.

3. Machine washing. Use Permanent Press Cycle. Wash in warm water with mild detergent.

4. Hand washing. Wash in warm water using mild detergent. DO NOT WRING OR TWIST. Rinse in clean warm water.

5. DO NOT USE CHLORINE BLEACH OR STARCH.

6. Dry at low heat (do not exceed 130°F). After drying, tumble at room temperature for 10 minutes. Remove immediately from dryer. To drip dry, remove from water and place on rust-proof hanger.

DO NOT REMOVE THIS LABEL

3.3.8.4 Combination identification and instruction label. The identification label (class 1) and the instruction label (class 3) may be combined into one label. The combination shall conform to the requirements of the class 15 label.

3.3.9 Buckles. The buckles for waist adjustment straps shall be tongueless, 2-bar conforming to type II, class 3, style 3, 5/8 inch of MIL-B-543.

* 3.4 Design. The trousers shall have a buttonhole fly, right and left hip pockets with flaps, side hanging pockets, right and left leg cargo pockets with flaps, seat patches (types I, III and V), knee patches with front knee action pleats (types I, III and V), and leg hem drawtapes.

3.5 Figures. Figures 1, 2 and 3 are furnished for information only. If there are inconsistencies between the written document and the figures, the written document shall control.

3.6 Patterns. Standard patterns, which provide a seam allowance of 1/2 inch for outseams, seat seams, crotch seams and inseams, 1/4 inch allowance for hip pocket flaps and tabs and 3/8 inch allowance for all other seams,

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

except where otherwise specified, will be furnished by the Government. Standard patterns shall not be altered in any way and are to be used only as a guide for cutting the contractor's working patterns. The working patterns shall be identical to the standard patterns. Minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the dimensional, serviceability, or appearance requirements cited in the specification.

* 3.6.1 List of pattern parts. The component parts of the trousers shall be cut from materials specified in accordance with the pattern parts indicated in table I.

TABLE I. List of pattern parts

Material	Nomenclature	Cut parts
Cotton/nylon cloth or cotton poplin	Front 1/	2
	Back 1/	2
	Side hanging pocket bearer 1/	2
	Side hanging pocket facing 1/	2
	Left fly (buttonhole fly and lining) 1/	3
	Hip pocket facing	2
	Hip pocket bearer	2
	Hip pocket flap	2
	Hip pocket flap tab	2
	Hip pocket flap and tab (one-piece) 2/	2
	Seat patches (types I, III and V)	2
	Cargo pocket	2
	Cargo pocket flap	2
	Cargo pocket flap tab	2
	Cargo pocket flap and tab (one-piece) 2/	2
	Knee patch (types I, III and V)	2
Cotton/nylon cloth or cotton poplin (ground shade or printing second, see 3.3.2)	Side hanging pocket 1/	2
	Right fly lining 1/	1
	Cargo pocket facing 3/	2
	Hip pocket	2
	Protective flap (type III only)	1
Fusible interlining (types I, III and V trousers only)	Hip pocket flap	2
	Hip pocket flap and tab (one-piece) 2/	2
	Cargo pocket flap	2
	Cargo pocket flap and tab (one-piece) 2/	2

TABLE I. List of pattern parts (cont'd)

Material	Nomenclature	Cut parts
Alternate sewn-on waistband construction:		
Cotton/nylon cloth or cotton poplin	Front	2
	Back	2
	Side hanging pocket bearer	2
	Side hanging pocket facing	2
	Left fly lining	1
	Buttonhole fly	1
	Waistband 4/	1
	Right fly lining	1
Cotton/nylon cloth or cotton poplin (ground shade or printing second, see 3.3.2)	Side hanging pocket	2
	Hip pocket	2
	Waistband lining 3/ 4/	1
	Protective flap (type III only)	1

1/ When alternate sewn-on waistband and fly pattern pieces are used, disregard these pattern pieces.

2/ When alternate (one-piece) hip pocket flap and tab, cargo pocket flap and tab and alternate fusible pattern pieces are used, disregard separate (two-piece) flap, tab and fusible pieces.

3/ When cargo pocket facing and waistband lining are strip cut and put on rolls, disregard these pattern pieces.

4/ Waistband and waistband lining are cut from the same pattern part.

3.7 Construction.

3.7.1 Stitches, seams, and stitching. Stitch, seam, and stitching types, as specified in table I shall conform to FED-STD-751. When two or more methods of seams or stitches are given for the same operation, any one may be used. Where stitch type 401 is used, the looper (underthread), shall be on the inside of the trousers. Unless otherwise specified, double needle stitching shall be 3/16 to 9/32 inch gage with outer row of stitching 1/16 inch from edge on outside of trousers. The gage of stitching for safety stitch construction shall be 3/8 inch. The guides and knives on the safety stitch machines shall be set to trim only the ravelled ends of the fabric. Seam allowances shall be maintained with seams sewn so that raw edges, runoffs, twists, pleats, puckers, or open seams will not result. All seams shall start and finish evenly. Seams required to be worked out having a depth between the fold of 1/8 inch or more shall be considered a defect.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

3.7.1.1 Type 301 stitching. Ends of all stitching shall be backstitched or overstitched not less than 1/4 inch except where ends are turned under or caught in other seams or stitching. Ends of continuous line of stitching shall be overlapped not less than 1/2 inch except on labels where a minimum of three stitch overlap is required. Thread tensions shall be maintained so that there will be no loose stitching resulting in loose bobbin or top thread or excessively tight stitching resulting in puckering of the materials sewn. The lock shall be imbedded in the materials sewn.

3.7.1.1.1 Repairs of type 301 stitching. Repairs of type 301 stitching shall be as follows:

a. When thread breaks or bobbin run-outs occur during stitching, the stitching shall be repaired by restarting the stitching a minimum of 1/2 inch back of the end of the stitching. 1/

b. Thread breaks or two or more consecutive skipped or runoff stitches noted during inspection of the item shall be repaired by overstitching. The stitching shall start a minimum of 1/2 inch in back of the defective area, continue over the defective area a minimum of 1/2 inch beyond the defective area onto the existing stitching. Loose or excessively tight stitching shall be repaired by removing the defective stitching without damaging the materials and restitching in the required manner. 1/

1/ When making the above repairs, the ends of the stitching are not required to be backstitched.

3.7.1.2 Types 401, 502, 503, 504, 515, 516, or 519 stitching. Thread tension shall be maintained so that there will be no loose stitching. All repairs shall be in accordance with 3.7.1.1.1a. and 3.7.1.1.1b. Repairs to stitch type 401 may be accomplished by use of stitch type 301 except when used for eyelets.

3.7.2 Stitches per inch. The minimum and maximum number of stitches per inch shall be as specified in table II.

3.7.3 Buttonholes.

3.7.3.1 Eyelet-end tapered bar. The buttonholes in the cargo pocket flaps, hip pocket flaps, fly, front waist, and leg bottoms shall be eyelet-end tapered bar type worked over the gimp specified in 3.3.7.2 with not less than four tacking stitches at bar end catching gimp ends (not counting crossover stitch). The purling shall be on the outside surface of the facing. The cut lengths shall be 3/4 to 7/8 inch, unless otherwise indicated in table II. The button-holes shall be clean-cut with the stitching securely caught in the fabric.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

3.7.4 Eyelets. Eyelets for alternate leg bottom draw tape shall be sewn with purling on the outside with a 3/16 to 1/4 inch diameter finished opening. The width or bight of stitching around the eyelet shall be not less than 1/16 inch. The eyelet stitching shall have at least four overlapping stitches.

3.7.5 Bartacks. Bartacks shall measure 3/8 inch to 5/8 inch long, except where otherwise indicated. Bartacking shall be free from thread breaks and loose stitching.

3.7.6 Fusing ends of nylon tape. The ends of nylon drawcord tape shall be fused. The apparatus used to fuse ends shall be capable of providing sufficient heat to provide a smooth edge with the cut ends of tape yarns all fused together.

3.8 Manufacturing operations requirements. The trousers shall be manufactured in accordance with the operation requirements specified in table II. The contractor is not required to follow the exact sequence of operations. Any basting or holding stitching required to facilitate manufacture is permissible provided the thread is removed or does not show on the finished trousers, except for size label holding stitches and pockets which may be prehemmed.

3.9 Use of automated apparel equipment. Automated apparel equipment may be used to perform any of the operations specified in table II, providing that the seam and stitch type are as specified and the finished component conforms to the required configuration. When a government furnished shaper pattern is forwarded, the component shall conform to that pattern.

NO.	TABLE II. MANUFACTURING OPERATIONS REQUIREMENTS	STITCH TYPE	SEAM AND STITCHING TYPE	STITCHES PER INCH	THREAD		
					NEEDLE	BOBBIN/ LOOPER	COVER
1.	Cut trousers.						
	a. Cut trousers in strict accordance with patterns furnished which show size, shape, directional lines, placement of pockets, and notches for proper assembly of parts. The directional lines indicate the warp, unless otherwise specified. The directional lines may vary from the warp direction by not more than 2-1/2 inches on both fronts and backs. Measurements shall be taken from top and bottom of directional lines on pattern to selvage edge of the fabric and the difference between the two measurements shall not exceed 2-1/2 inches.						
	b. Cut all parts from one piece of material except fly parts, waistband lining, belt loops, hip pocket facings and bearers, cargo pocket facing, side pocket facings, side and hip pockets, pocket flap tabs, protective flap and buttonhole or eyelet reinforcements where required, which may be cut from ends. Side and hip pockets may be cut in either the warp or filling direction. The cargo pocket facing may be strip cut to the proper width and placed on rolls. It may be pieced with no more than one joining seam (in the finished trousers) with the seam spread open.						
	c. Cut the waistband lining in the direction of the warp and to meet the requirements of operation 17. The waistband lining shall finish 1-1/2 to 1-3/4 inches in width and may be pieced with no more than one joining seam (in the finished trousers) with the seam spread open. The waistband lining may be strip cut to proper width and placed on rolls.	301	SSa-1	10-14	50	50

NO.	TABLE II. (cont'd) MANUFACTURING OPERATIONS REQUIREMENTS	STITCH TYPE	SEAM AND STITCHING TYPE	STITCHES PER INCH	THREAD		
					NEEDLE	BOBBIN/ LOOPER	COVER
1.	Cut trousers. (cont'd) d. Cut buttonhole and eyelet reinforcement pieces in either direction of adequate length and width to reinforce buttonhole or eyelet. Leg drawcord reinforcements can be one piece to extend under both buttonholes (see operation 22.a.). e. Cut leg hem drawcord (cut two) 32 ± 1 inches long for all sizes. The ends shall be fused. f. Cut seven belt loops to conform to the finished measurements specified in operations 7.a. and 18.f. Loops should measure 3/8 to 1/2 inch wide and 1-3/4 to 2-1/4 inches long between bartacks when finished (see operation 18.f.). g. Cut the 5/8 inch tape (two each) for waist adjustment straps 7-1/4 ± 1/2 inches for all sizes. h. Cut the 5/8 inch tape (two each) for the buckle attachment strap 2-1/2 to 2-3/4 inches long. i. Cut the fusible interlinings in the same direction as the parts to be fused.						
2.	Replacement of damaged parts. During the spreading, cutting, and manufacturing process, components having material defects or damages that are classified as defects in MIL-STD-1488 shall be removed from production and replaced with non-defective and properly matched components.

3.	Marking or bundling. a. Mark, ticket, or bundle all component parts of the trousers except those parts cut from ends to insure correct size, proper assembly, and uniform shade throughout the trousers. b. Any method of marking may be used except: (1) Metal fastening devices. (2) Sew-on tickets. (3) Adhesive type tickets which leave traces of adhesive on the material after removal of the tickets. c. The use of ink pad numbering machine, rubber stamp or pencil will be acceptable provided the numbers do not show through the outside of the trousers. d. Identify test swatches (basic material and fusible interlining) that represent the every 1000 trouser units of production (see 4.4.3.4).						
4.	Fusing (types I, III and V trousers only). (see 3.3.3.1) a. Position fusible (both hip and cargo pocket flaps) with all edges set back 1/8 inch from flap edges. Fuse the fusible to the flaps. (The tab is not fused.) or b. When using the alternate one piece flap and tab construction, position fusible with all edges

Regular	20-1/2	21-3/4	23	23-7/8	25-3/8	± 1/2
Long	20-1/2	21-3/4	23	23-7/8	25-3/8	± 1/2
X-long	------	21-3/4	23	23-7/8	------	± 1/2

Method of measuring. The waistband and fly shall be buttoned and trousers placed flat upon a table and measured as follows:

1/ Measure along center of waistband from folded edge to folded edge.

2/ Measure inseam of trousers from crotch seam to bottom edge of trouser leg.

3/ Measure from top edge of waist to bottom of leg along outseam.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

4/ Measure across bottom of leg. Multiply by two.

5/ Measure across leg from side edge to side edge in line with outside folded edges of pleats. Multiply by two.

3.11 Workmanship. The end item shall conform to the quality of product established by this specification and the occurrence of defects shall not exceed the applicable acceptable quality levels.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements (examinations and tests) as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the government. The Government reserves the right to perform any of the inspections set forth in this specification where such inspections are deemed necessary to ensure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items shall meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of ensuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling inspection, as part of manufacturing operations, is an acceptable practice to ascertain conformance to requirements, however, this does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to accept defective material.

4.1.2 Responsibility for dimensional requirements. Unless otherwise specified in the contract or purchase order, the contractor is responsible for ensuring that all specified dimensions have been met. When dimensions cannot be examined on the end item, inspection shall be made at any point, or at all points in the manufacturing process necessary to ensure compliance with all dimensional requirements.

4.1.3 Certificates of compliance. When certificates of compliance are submitted, the Government reserves the right to inspect such items to determine the validity of the certification.

4.2 Classification of inspections. The inspection requirements specified herein are classified as follows:

a. First article inspection (see 4.3).
b. Quality conformance inspection (see 4.4).

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

4.3 First article inspection. When a first article is required (see 3.1 and 6.2), it shall be examined for the defects specified in MIL-STD-1488.

4.4 Quality conformance inspection. Unless otherwise specified, sampling for inspection shall be performed in accordance with MIL-STD-105.

4.4.1 Component and material inspection. In accordance with 4.1, components and materials shall be inspected in accordance with all the requirements of referenced documents unless otherwise excluded, amended, modified, or qualified in this specification or applicable purchase documents.

4.4.2 Certification. When printed or dyed seconds are used, the contractor shall furnish a certificate of compliance indicating that they meet the requirements of 3.3.2.

4.4.3 Daily preproduction testing (types I, III and V trousers only). The tests listed in table IV shall be performed each day prior to the start of production.

TABLE IV. Daily preproduction tests

Characteristics	Requirement	Test procedure
Fusing press settings	3.3.3.1	4.4.3.1
Actual fusing temperature	3.3.3.1	4.4.3.2
Bonding strength	MIL-C-44296	4.4.3.3

4.4.3.1 Fusing press settings. Before production begins each day, visually check all fusing machine settings for temperature, pressure, and dwell time for conformance with manufacturers recommendations. Nonconforming settings shall be adjusted accordingly. Actual setting shall be recorded in the first column of figure 2.

4.4.3.2 Actual fusing temperature. One swatch of outershell material, 8 inches in the warp direction and 11 inches in the filling direction, shall be cut from material to be used in the first of the days production. At the same time, one swatch of fusible interlining cloth material, 8 inches in the machine direction and 11 inches in the cross-machine direction, shall be cut from material to be used in the first of the days production. All test swatches shall be cut into three equal parts of approximately 3.6 inches by 8 inches. The fusible test swatches may be cut slightly smaller in size to avoid fusing belt or head contamination. Sandwich a temperature strip (see 6.7) face down between one specimen of outershell material placed face down and a specimen of fusible interlining cloth material placed on top with the adhesive side down. The temperature strip shall be placed slightly within the fusible starter strip. All fusing tests shall have an approximate 1 inch

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

by full width starter strip or non-fused area incorporated into the top portion of any given bond strength samples. This can be accomplished by placing a thin, non-adhesive material between the fusible interlining cloth material and outershell before fusing, or by folding the fusible onto itself. This sample shall be placed in the center of the fusing press conveyor or head with the outershell material down. Prepare two additional samples as described above using fusible interlining cloth material and place them on the left and right sides of the fusing head or conveyor belt with the outershell material face down. After the fusing press is fully warmed up, run all samples through the fusing press, take the temperature of the strip specimens, determine the average of the three readings, and record the results in column 2 of figure 2. Retain each individual temperature reading in an organized, self-developed worksheet format. If the average falls outside of the fusible manufacturers recommended range, or if there is a variance in excess of $10^{o}F$ or $6^{o}C$ between lanes, determine the cause, correct the problem, and repeat the testing process. Actual temperature and time shall be recorded in Chart A of figure 2.

4.4.3.3 Bonding strength. To determine bonding strength, trim all fusible interlining cloth swatches from the actual fusing temperature test to 1 inch by 8 inch strips. Pinking shears shall not be used to cut strips. The outershell fabric of each shall be clamped at the top, and the fusible material pulled from the starter strips downwards in a vertical direction in a steady, continuous motion. A constant-rate-extension (CRE), or a constant-rate-traverse (CRT), or calibrated spring scale type tester may be used. If a spring scale type tester is used, it shall be calibrated once weekly. Any calibration procedure used shall assure an accuracy of 1/4 ounce or better, and the date of calibration shall be entered on figure 2. Average the three bonding strength readings in an organized self-developed worksheet format and record the averages on Chart A of figure 2. If any individual reading fails to meet minimum bonding strength requirements, then cause must be determined, corrections made, and the material retested until the problem is resolved before commencing production. In case of bonding strength dispute see 6.6.

4.4.3.4 In-process fusing press maintenance and representative production testing (types I, III and V trousers only). In-process tests listed in table V shall be performed. Actual fusing temperature and bonding strength testing shall be performed after every 4 hours of fusing production time. Pressure evenness and dwell time maintenance testing shall be performed once weekly. All representative production testing shall be performed on outershell, and fusible interlining cloth materials, sampled from component lots to be consumed in the next 1000 units of end item production. Sample size, and acceptance/rejection criteria shall be as specified in the applicable test procedure. Tests shall include appearance before laundering and appearance and bonding strength after three launderings.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

TABLE V. In-process fusing maintenance and representative production tests

Characteristic	Requirement	Test procedure
Fusing press maintenance:		
Actual fusing temperature	3.3.3.1	4.4.3.2
Bonding strength	MIL-C-44296	4.4.3.3
Pressure evenness	3.3.3.1	4.4.3.5
Dwell time	3.3.3.1	4.4.3.5
Representative production:		
Appearance (before and after 3 launderings)	3.3.3.1	4.4.3.6
Laundered bonding strength	3.3.3.1	4.4.3.6

4.4.3.5 Pressure evenness and dwell time. Cut five strips, 8 inches in the warp direction by 2 inches in the filling direction, of outershell material and slightly smaller sized fusible interlining cloth material. Place each of the fusible strips, with the adhesive side down, on the top of the outershell material with the face side down and with a fusible starter strip (see 4.4.3.2). Arrange the five specimens on the fusing press conveyor belt alongside each other in five different lanes, consisting of extreme left, middle left, center, middle right, and extreme right. For head press equipment, place a specimen in each corner and one in the middle. Run the specimens through the fusing press and using a stop watch, mark the time elapsed between the time the leading edge of one of the specimens comes under pressure contact and the time it is released from the pressure contact. Enter the dwell time on figure 2. Remove the strips from the fusing machine when adequately cooled, cut fused outershell/fusible laminate to 1 inch in the filling direction, and perform the bonding test in 4.4.3.3 on all five specimens, recording the results for each specimen on figure 2. The dwell time should be consistent with the machine speed ratings. The fusible manufacturers recommended range and all five specimens should meet the minimum initial requirement for bond strength. Any variations shall be investigated for cause, corrections made, and the testing process repeated.

4.4.3.6 Laundered appearance and bonding strength. For testing, prepare an 8 inch in the warp by an 11 inch in the filling, outershell material specimen representative of each 1000 unit production end item lot. Prepare a slightly smaller sized fusible interlining cloth specimen and fuse in accordance with 4.4.3.1. Launder the fused sample three times in accordance with MIL-C-44296 requirements, except launder for a minimum of 10 minutes and do not condition to equilibrium under standard conditions. Examine the test swatch for bubbling, delamination, or strike through and record observations on Chart B of figure 2. Trim the swatch into three 1 inch by 8 inch strips

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

and perform bonding strength tests using the bonding strength procedure in the preproduction testing in 4.4.3.2. Retain each individual bonding strength reading in an organized, self-developed worksheet format and record averages on Chart B of figure 2. Any evidence of bubbling, delamination, or strike through, or bonding strength not meeting the requirements of MIL-C-44296 shall be investigated for cause, corrections made, and retesting performed before continuing production of the 1000 end items represented by the sample. At the conclusion of all tests, authorized initials shall be written in to verify contractor results.

4.4.4 End item visual examination. The end items shall be examined for trousers "U" visual defects in accordance with the provisions of MIL-STD-1488.

4.4.5 End item dimensional examination. The end items shall be examined for dimensional defects in accordance with provisions of MIL-STD-1488.

4.4.6 Packaging examination. The fully packaged end items shall be examined in accordance with the provisions of MIL-STD-1488.

4.4.7 Palletization examination. The fully packaged and palletized end items shall be examined for the defects listed below. The lot size shall be expressed in units of palletized unit loads. The sample unit shall be one palletized unit load, fully packaged. The inspection level shall be S-1 and the acceptable quality level (AQL), expressed in terms of defects per hundred units, shall be 6.5.

Examine	Defect
Finished dimension	Length, width, or height exceeds specified maximum requirement.
Palletization	Pallet pattern not as specified. Load not bonded as specified.
Weight	Exceeds maximum load limits.
Marking	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application.

5. PACKAGING

5.1 Preservation. Preservation shall be level A or Commercial, as specified (see 6.2).

5.1.1 Level A preservation. Each pair of trousers, with inseams meeting, shall be folded from the leg bottom up toward the waistband to an overall length of approximately 23-1/2 inches. Before folding the regular and long trousers to the required length, the leg bottoms shall first be folded over

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

approximately 4 inches. For the larger sizes, it may be necessary to adjust the seat area to achieve the desired width of approximately 14-1/2 inches. Each pair of trousers shall be placed in its own plastic bag in accordance with A-A-50083.

5.1.2 Commercial preservation. Trousers shall be preserved in accordance with ASTM D 3951.

5.2 Packing. Packing shall be level A, B, or Commercial as specified (see 6.2).

* 5.2.1 Level A packing. Thirty pairs of trousers of one size only, for types I and IV and thirty five pairs of trousers of one size only for types III and V, preserved as specified in 5.1, shall be packed in a snug-fitting fiberboard shipping container conforming to style RSC-L, grade V2s of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class weather-resistant, variety DW, grade V15c of PPP-B-636. Trousers shall be packed flat, six in depth for types I and IV and seven in depth for types III and V within a shipping container. The inside dimensions of each container shall approximate 23-1/2 inches in length, 15 inches in width, and 15 inches in depth. Approximate dimensions are furnished as guides only. Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.6. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping, except for type II, class F loads.

* 5.2.2 Level B packing. Thirty pairs of trousers of one size only for types I and IV and thirty five pairs of trousers of one size only for types III and V, preserved as specified in 5.1, shall be packed in a snug-fitting fiberboard shipping container conforming to style RSC-L, type CF (variety SW) or SF, class domestic, grade 275 of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class domestic, variety DW, grade 275 of PPP-B-636. Trousers shall be packed flat, six in depth for types I and IV and seven in depth for types III and V within a shipping container. The inside dimensions of each container shall approximate 23-1/2 inches in length, 15 inches in width, and 15 inches in depth. Approximate dimensions are furnished as guides only. Each shipping container shall be closed in accordance with method II as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.6.

5.2.2.1 Weather-resistant fiberboard shipping containers. When specified (see 6.2), shipping containers shall be grade V3c, V3s, or V4s fiberboard box fabricated in accordance with PPP-B-636 and closed in accordance with method III as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.6.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

5.2.3 Commercial packing. Trousers, preserved as specified in 5.1, shall be packed in accordance with ASTM D 3951.

5.3 Palletization. When specified (see 6.2), trousers packed as specified in 5.2.2 or 5.2.3, shall be palletized on a 4-way entry pallet in accordance with load type Ia of MIL-STD-147. Pallet types shall be type I (4-way entry), type IV, or type V in accordance with MIL-STD-147. Pallets shall be fabricated from wood groups I, II, III, or IV of MIL-STD-731. Each prepared load shall be bonded with primary and secondary straps in accordance with bonding means C and D or film bonding means F or G. Pallet pattern shall be number 3 in accordance with appendix of MIL-STD-147.

5.4 Marking. In addition to any special marking required by the contract or purchase order, shipping containers and palletized unit loads shall be marked in accordance with MIL-STD-129 or ASTM D 3951, as applicable.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The trousers are for wear by military personnel of the Department of Defense as an outer garment: type I in foliated areas, types IV and V in desert areas and type III in hot humid areas.

6.2 Acquisition requirements. Acquisition documents must specify the following:

a. Title, number, and date of this specification.
b. Type and size required (see 1.2).
c. Issue of DODISS to be cited in the solicitation, and if required, the specific issue of individual documents referenced (see 2.1.1 and 2.2.).
d. When a first article is required (see 3.1, 4.3, and 6.3).
e. Levels of preservation and packing (see 5.1 and 5.2).
f. Type and class of unit load required (see 5.2.1).
g. When weather-resistant grade fiberboard shipping containers are required for level B packing (see 5.2.2.1).
h. When palletization is required (see 5.3).

6.3 First article. When a first article is required, it shall be inspected and approved under the appropriate provisions of FAR 52.209-4. The first article should be a preproduction sample. The contracting officer should specify the appropriate type of first article and the number of units to be furnished. The contracting officer should also include specific instructions in acquisition documents regarding arrangements for selection, inspection, and approval of the first article.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T23:33Z
Check the source to verify that this is the current version before use.

6.4 Samples. For access to samples address the contracting activity issuing the invitation for bids or request for proposal.

6.5 International standardization agreements. Certain provisions of this document are the subject of international standardization agreement as cited in NATO, STANAG No. 2333. When amendment, revision, or cancellation of this document is proposed which will affect or violate the international agreement concerned, the preparing activity will take appropriate reconciliation action through international standardization channels including departmental standardization offices, if required.

6.6 Bonding strength dispute procedure. In case of a dispute, the average of the first 3 inches of the five highest bonding strength peaks from a chart recording on a CRE tensile tester, running at 12 inches per minute shall determine the bonding strength. If splitting is observed, then just the highest peak shall be regarded as the bonding strength.

6.7 Temperature strip. Suggested sources for temperature strips are as follows:

MRCINC, Reatec Division, telephone number (215) 687-4300
Paper Thermometer Co., telephone number (603) 547-2034

Also, each fusible manufacturer supplies their own brand of temperature strips.

6.8 Supersession data. The type II desert camouflage pattern (6 color), cotton/nylon twill trousers has been deleted as it is no longer required.

6.9 Subject term (key word) listing.

Battle dress uniform
Clothing
Desert
Pants
Tropical
Utility
Woodland

6.10 Changes from previous issue. The margins of this specification are marked with asterisks to indicate where changes (additions, modifications, corrections, deletions) from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content as written, irrespective of the marginal notations and relationship to the last previous issue.
