DATA ITEM DESCRIPTION

Title: Post-Design Weight Analysis Report

Number: DI-MGMT-81503A
Approval Date: 20070927
AMSC Number: F9016
Limitation: N/A
DTIC Applicable: No
GIDEP Applicable: No
Office of Primary Responsibility 11 (ASC/ENFS)
Applicable Forms: DD Form 365-4
Use/relationship: The post-design Weight Analysis Report is prepared for the first full specification aircraft. The purpose of the report is to provide in a single document a record of integrated design concept, criteria, and weight information which will serve as a baseline working document to be used during the acquisition phase and service life.

a. Aircraft weight, balance, and inertia properties critically affect system performance. This report provides information required to document mass properties trends.

b. This Data Item Description (DID) contains the format, content, and intended use information for the data deliverable resulting from the work tasks described in the contract.

c. DI-MGMT-81503A supersedes DI-MGMT-81503.

Requirements:

1. Reference documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as cited in the contract.

2. Format. The contractor's format is acceptable.

3. Content. The document should be organized generally by subsystem and shall provide the types of information shown below:

   a. Weight effect of the post-proposal, pre-contract negotiations identified by brief descriptive narrative.

   b. Sequential history of the major weight changes incurred during the contract, the cause and source of the change, impact on the configuration, and weight.

   c. A description of each functional subsystem grouping including design criteria, characteristics, and performance. This is to be followed by its chronology of major weight changes.

DISTRIBUTION STATEMENT A: Approved for public release, distribution is unlimited.

Check the source to verify that this is the current version before use.

d. Effectiveness of the Mass Properties Control and Management Process (MPCMP) used during the program, including functional problem areas encountered.

e. A group and detailed weight statement, tabulation of external geometry, and takeoff, landing, and cruise performance available from existing working papers, contractual documents, and reports showing two parallel columns—one column which represents the proposal configuration and the second column which describes the production vehicle.

4. End of DI-MGMT-81503A.
