DATA ITEM DESCRIPTION

Form Approved
OMB NO. 0704-0188

Public reporting burden for this collection of information is estimated to average 110 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington DC 20503.

1. TITLE	2. IDENTIFICATION NUMBER
Inertia (Mass Properties) Report for Aircraft	DI-MGMT-81504

3. DESCRIPTION/PURPOSE

3.1 Aircraft weight, balance, and inertia properties critically affect system performance. This report provides up-to-date information required to maintain cognizance of deleterious trends which may require program office action, provide data for use by various engineering activities, and provide safety of flight information to the field.

4. APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC APPLICABLE	6b. GIDEP APPLICABLE
951120	F/ASC-ENFS		

7. APPLICATION/INTERRELATIONSHIP

7.1 This Data Item Description (DID) contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

7.2 This report is developed initially in the Demonstration and Validation Phase or Engineering and Manufacturing Development Phase, and then updated in subsequent phases.

7.3 This DID interrelates with DI-MGMT-81452 Mass Properties Control and Management Process Report.

7.4 This DID supersedes DI-S-3584.

8. APPROVAL LIMITATION	9a. APPLICABLE FORMS	9b. AMSC NUMBER
		F7174

10. PREPARATION INSTRUCTIONS

10.1 Format. The contractor's format is acceptable.

10.2 Content. The Inertial Loads Report shall specify the calculated inertia loads, including results of weight and balance analyses, moments of inertia, and distribution of inertia loads, shears, and moments for unit linear and angular accelerations. The data is this report shall correspond to an Estimated, Calculated or Actual Weight Report. Inertia Loads Report shall include:

a. Contract number, aircraft designation, acquisition activity and contractor identification or serial numbers, as appropriate, of the aircraft for which the data in the report is considered to be representative.

b. Identification of the weight report that the inertia data is identified with.

c. A table summarizing the weight, center of gravity (c.g.) and moment of inertia data for weight empty and all weight condition covered in the report identified in b. above.

11. DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

Block 10. PREPARATION INSTRUCTIONS (continued)

d. Dimensional data suitably illustrated, locating the aircraft axes (reference and principle) and Mean Aerodynamic Chord (MAC). Sign convention suitably illustrated.

e. Detailed data used for flutter analysis, flying quality analysis and other analysis. This may be panel point data.
