DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

TITLE	1. IDENTIFICATION NUMBER
NING SYSTEM BASIS ANALYSIS REPORT (TSBAR)	DI-ILSS-80571

DESCRIPTION/PURPOSE

3.1 The TSBAR documents existing training programs and establishes the functional baseline for the design, development, and operation of an integrated Aircrew Training System (ATS). The TSBAR is used to define training capabilities and establish system requirements for the ATS.

APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC REQUIRED	6b. GIDEP REQUIRED
880415	F/AFSC-ASD		

APPLICATION/INTERRELATIONSHIP

7.1 This Data Item Description (DID) contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement for this data included in the contract.

7.2 This DID is applicable to all ATS acquisition programs.

APPROVAL LIMITATION	8a. APPLICABLE FORMS	8b. AMSC NUMBER
		F4384

PREPARATION INSTRUCTIONS

. *Content and format.* The format for the TSBAR is shown in the following paragraphs along with a scription of the material to be contained in each section of the report.

10.2 *Introduction.* This section contains an overview of the purpose and expected application of the data and the results compiled from this analysis. It shall describe how information examined and assessments made during this analysis can be integrated with other Instructional System Development (ISD), System Engineering (SE), and Logistics Support Analysis (LSA) functions to establish the ATS as an operational system. It shall describe how training capabilities and system requirements identified from this analysis will influence the eventual design, development, and operation of the ATS.

10.3 *Planning and scheduling considerations.* This section describes the planning and scheduling considerations needed to accomplish this analysis and implement the results. It shall also address these same considerations for any future analysis efforts that are required to establish the ATS. It shall describe the planning/scheduling considerations required to establish a comprehensive set of system level and lower level specifications for the design and development of the ATS.

10.4 *Analytical process.* This section describes the methods, procedures, data compilation, and analytical tools used to accomplish this analysis and derive the system requirements for the ATS. It shall contain detailed flow diagrams of the process and describe each discrete event/step of the process. Any assumptions made during the course of the analytical process shall be described and include rationale.

(continued on page 2)

DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Block 10, Preparation Instructions (Continued)

10.5 *Design goals and requirements selection.* This section contains a list of design goals/objectives to be achieved by the design(s) of the ATS, based on the system requirements identified by this analysis. It shall describe the optimization and trade-off criteria used in deriving system requirements for the ATS. This section shall include functional diagrams and descriptions of the hierarchy of requirements and show the relationship between program, system, and training requirements at all levels.

10.6 *TSBAR results.* The format and content for this section is described in the following paragraphs.

10.6.1 *Information sources and data collection.* This section contains a description of all information sources and data collected during the course of this analysis. It shall include all locations, organizations, and personnel contacted and used as information sources. It shall also describe the objective, utilization, and expected result for each informational event.

10.6.2 *Existing training system analysis.* This section addresses the existing training program(s) under consideration. It shall contain detailed course summaries for each program. It shall also include separate descriptions for results, assessments, and recommendations in each of the following areas:

a. Current training - Addresses the management, organization, structure, conduct, delivery, and evaluation of training.
b. Air Force/MAJCOM policy, regulation, and procedure - Addresses relevancy, requirements flowdown, consistency, and standardization of these governing documents.
c. MAJCOM organizational structure - Addresses identification of relationships, functions, interfaces, and interactions between organizations.
d. Resources and assets - Addresses numbers, types, and locations of manpower, personnel, and training equipment.
e. Basing and facility provisions - Addresses the training provisions, capacities, space, environmental conditions, and airspace restrictions at each base.
f. Logistics and maintenance support - Addresses availability of test equipment and maintenance/logistic support of training devices and the aircraft.

10.6.3 *Similar system analysis.* This section documents the results, assessments, and recommendations made from this analysis for each training program under consideration. It shall address each area listed in 10.6.2a through f above as a separate section. It shall also include a matrix and description that compares training programs and depicts similarities and differences among programs for selected training features (simulators, computer-based instruction, etc.).

10.6.4 *Training technology assessment.* This section addresses the training program(s) under consideration. It shall include separate descriptions for results, assessments, and recommendations in the areas of training concepts, methods, techniques, technology, and system evaluation. It shall address the instructional and evaluative attributes of each area. It shall describe alternative and optimum combinations of training concepts, methods, techniques, and technologies with rationale, for the ATS under consideration.

10.6.5 *Problem analysis.* This section describes the weaknesses, deficiencies, and constraints identified by this analysis for the training program(s) under consideration. It shall include recommendations of how the ATS under consideration can solve existing training deficiencies and anticipated training problems.

Block 10, Preparation Instructions (Continued)

10.6.6 *ATS concept*. This section describes and depicts the organizational, logistic support, and training concept(s) recommended for the ATS under consideration. It shall describe the relationships among these concepts, functional capabilities, characteristics of training devices/media and system requirements. It shall include block and flow diagrams for clarification. It shall describe system-level requirements for the chosen ATS conceptual design.

10.7 *TSBAR updates*. Updates to this report shall be submitted as change pages. With each revision to this report, this section shall contain a summary listing of pages changed and the date the change occurred. All revisions to derived system requirements shall be under configuration change control.

10.8 *Appendices*. The appendices contain supporting data and detail necessary to complement descriptions in 10.6.2 and 10.6.6 above and provide detailed information on the subjects listed below as Appendices A and B.

a. Appendix A. Detailed Course Summaries - Describes the courses in the existing training program. Provides statistical data, summary tables, and comparisons for courses/qualification levels and types of training provided.
b. Appendix B. System Requirements Document - Specifies program, system, and training requirements; operational limiting factors; and design constraints for the ATS. Includes requirements for trainee throughput, surge, entry and qualification levels, performance, evaluation, and management. Also specifies subsystem requirements for the ATS.
