DATA ITEM DESCRIPTION
Title: STATIC STRENGTH METHODOLOGY REPORT

Number: DI-SESS-82253
AMSC Number: N10003
DTIC Applicable: N/A
Preparing Activity: AS
Applicable Forms: N/A

Approval Date: 20190131
Limitation: None
GIDEP Applicable: No
Project Number: SESS-2019-001

Use/relationship: This report describes the details of the technical approach and methodologies that will be used to perform the static strength analysis of the aircraft store's structure.

This Data Item Description (DID) contains the format and content for the data products resulting from work tasks described by the contract statement of work.
Requirements:

1. Reference documents. None.

2. Format. Contractor format acceptable.

3. Content. The Static Strength Methodology Report shall:

3.1 Describe the methodology used to perform static analyses of the store structure, including joints, fasteners, splices, and fittings.

3.2 Describe the methodology to be used to determine internal load distributions, including for fastened joints and bonded structure.

3.3 Describe the methodology to be used to determine structural stiffness, load transfer, panel effectivity and bond line integrity.

3.4 Describe the methodology to be used to determine or develop material allowables, environmental and other knockdown factors, and corrections where deviations from the constraints under which published allowables are desired.

3.5 Describe the methodology to be used to perform static strength and stability analyses and how margins will be calculated and presented

3.6 Describe the basic structural design criteria that will be employed; factors such as fitting, bearing and others that will be employed.

3.7 Describe any planned deviations from standard aerospace industry accepted structural design practices specified in the contract.
