SUPERSEDING
MIL-H-55053A
27 MARCH 1962

MILITARY SPECIFICATION

HARDWARE, POLE LINE

GENERAL SPECIFICATION FOR

This specification is mandatory for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 This specification covers hardware as used in the construction of pole lines, towers, etc., including but not restricted to the following:

Bolt, Carriage	Clamp, Wire Rope
Bolt, Double Arming	Drive Ring
Bolt, Eye	Guy Attachment
Bolt, Hook	Hanger, Cable
Bolt, Lag	Hanger, Wire Strand
Bolt, Machine, Square Head	Hook, Guy
Bolt, Shoulder	Link, Reinforcing, Cable
Bolt, Thimble Eye	Nut, Eye
Brace, Crossarm	Pin, Insulator
Bracket, Insulator	Protector, Pole
Bridle Ring	Staple, Ground Wire
Clamp, Cable Suspension	Step, Pole
Clamp, Drop Wire	Strand, Connector
Clamp, Electrical	Strap, Support
Clamp, Guy	Washer, Saddle

2. APPLICABLE DOCUMENTS

2.1 The following documents of the issue in effect on date of invitation for bids, form a part of this specification to the extent specified herein.

SPECIFICATIONS

MILITARY

MIL-P-14527 - Pole Line Hardware; Preparation for Delivery of.

FSC 5975

STANDARDS

MIL-STD-105 - Sampling Procedure and Tables for Inspection by Attributes.

For applicable MS standards for items covered by this specification, see supplement.

(Copies of specifications and standards required by the contractors in connection with specific procurement functions should be obtained from the procuring agency or as directed by the contracting officer.)

2.2 Other publications. The following documents form a part of this specification to the extent specified herein. Unless otherwise indicated, the issue in effect on date of invitation for bids shall apply.

NATIONAL BUREAU OF STANDARDS

Handbook H-28 - Screw-Thread Standards for Federal Services.

(Application for copies should be addressed to the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402)

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

A153 - Zinc Coating (Hot Dip) on Iron and Steel Hardware.

(Application for copies should be addressed to the American Society for Testing and Materials, 1916 Race Street, Philadelphia, Pa. 19103.)

(Technical society and technical association specifications and standards are generally available for reference from libraries. They are also distributed among technical groups and using Federal agencies.)

3. REQUIREMENTS

3.1 Construction. Construction of each type of hardware shall be in accordance with the military standards listed herein and the paragraphs listed below.

3.2 Material. Material shall be as specified herein. Material not definitely specified shall be of the quality regularly used by the manufacturer in the product he sells on the commercial (as distinguished from the governmental supply) market. Material shall be free from all defects and imperfections that might affect the serviceability and appearance of the finished product.

Check the source to verify that this is the current version before use.

3.3 Standard product. Except where modified herein, it is intended that the bolts and nuts shall be a regular commercial product of the manufacturer or his suppliers. The parts shall be new and unused.

3.4 Threads. Unless otherwise specified, bolts and nuts shall be threaded with right hand unified or American National Coarse thread series in accordance with handbook H-28. For coated threads, the specified dimensions shall apply after coating.

3.5 Dimensions. The dimensions of the product shall comply with the specified requirements of the applicable MS standard and the requirements of paragraph 3.9.

3.6 Tensile Strength. Where applicable, tensile strengths shall comply with the specified requirements of the applicable MS standard and the requirements of paragraph 3.9.

3.7 Coating. When coating is required, the coating shall be free from lumps, blisters, uncoated spots, or other defects which might affect the serviceability of the article or the protection afforded the base metal. Coating shall be by the hot-dipped process. Zinc coating (hot-dipped) shall be in accordance with ASTM-A153. Hot-dipped zinc-coated bolts having rolled threads may be rerolled after coating if removal of surplus zinc is necessary, but threads shall not be recut after coating. Hot-dipped zinc-coated nuts shall be threaded after coating.

3.8 Workmanship. Pole line hardware applicable to this specification shall be manufactured in a thoroughly workmanlike manner in accordance with the best commercial practice for this type of material and in accordance with the applicable portions of the following paragraphs:

3.1 Construction.
3.2 Materiel.
3.3 Standard product.
3.4 Threads.
3.5 Dimensions.
3.7 Coating
3.9 Military Standards for individual hardware items.

3.9 Military standards for individual hardware items. All requirements specified herein are applicable to all hardware items covered by applicable military standards. Detail requirements or exceptions applicable to individual hardware items will be specified on the individual military standards. In the event of any conflict

between requirements of this specification and requirements of the military standard, the latter shall govern.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the supplier is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or order, the supplier may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure that supplies and services conform to prescribed requirements.

4.2 Sampling for lot acceptance.

4.2.1 Inspection lot. An inspection lot shall consist of all like items produced under essentially the same manufacturing conditions and offered for delivery at one time.

4.2.2 Sampling for examination. Statistical sampling and inspection shall be in accordance with MIL-STD-105 for general inspection level I. The acceptable quality level (AQL) shall be 2.5% defective.

4.2.3 Sampling for test. Statistical sampling and inspection shall be in accordance with MIL-STD-105 for special inspection level S-3. The acceptable quality level (AQL) shall be 2.5% defective.

4.3 Examination. Each of the sample hardware selected in accordance with paragraph 4.2.2 shall be examined to verify compliance with this specification. Examination shall be conducted as specified in table 1.

TABLE 1

Categories	Defects
Critical	Non defined
Major	
1A1.....	Item incomplete, component parts missing.
1A2.....	Type of finish, not as specified.
1A3.....	Materials not as specified.
1A4.....	Dimensions not within specified limits.
1A5.....	Threaded parts do not comply with specified requirements.
1A6.....	Damaged component, affecting use of part
1A7.....	Burrs, lumps, and blisters, affecting use of part.
Minor	
1B1.....	Scratches, abrasions, cuts.
1B2.....	Difficulty in operation of threaded parts
1B3.....	Poor adhesions of finish.
1B4.....	Burrs, lumps, and blisters not affecting use of part.

4.4 Test. Each sample of hardware selected in accordance with paragraph 4.2.3 shall be tested to assure conformance with military standards and the following requirements of this specification.

4.4.1 Tensile test. The test sample shall be subjected to tensile tests, (test procedure or method to be specified by originator) to assure conformance with strength requirements of applicable military standards.

4.4.2 Coating test. The test sample shall be subjected to coating test in accordance with ASTM-A153 to assure conformance with coating requirements of this specification.

4.4.3 Dimensions. The test specimen shall be measured by means of suitable gages and measuring instruments and shall meet the dimensions specified. Thread dimensions shall be measured by means of suitable

Check the source to verify that this is the current version before use.

gages or measuring instruments and shall be as specified within the limits of variation establishing the closest and loosest condition of fit permissible for the class of fit specified.

4.5 Examination of preparation for delivery. Packaging, packing, and marking shall be examined to assure conformance with the requirements of section 5.

4.6 Visual examination. The item shall be subjected to visual examination to determine compliance with paragraph 3.8 of this specification.

5. PREPARATION FOR DELIVERY

5.1 Preservation, packaging, packing and marking shall be in accordance with Specification MIL-P-14527.

6. NOTES

6.1 Ordering data. Procurement documents should specify the following:

Type of preservation, packaging and packing required (immediate use, storage, or overseas shipment), title, number, and date of this specification and any amendment thereto.

SPECIFICATION ANALYSIS SHEET

Form Approved
Budget Bureau No. 22-R255

INSTRUCTIONS: This sheet is to be filled out by personnel, either Government or contractor, involved in the use of the specification in procurement of products for ultimate use by the Department of Defense. This sheet is provided for obtaining information on the use of this specification which will insure that suitable products can be procured with a minimum amount of delay and at the least cost. Comments and the return of this form will be appreciated. Fold on lines on reverse side, staple in corner, and send to preparing activity. Comments and suggestions submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or serve to amend contractual requirements.
