MILITARY SPECIFICATION

HYDRAULIC FLUID, PETROLEUM BASE;
AIRCRAFT, MISSILE, AND ORDNANCE

This amendment forms a part of Military Specification MIL-H-5606E, dated 29 August 1980, and is approved for use by all Departments and Agencies of the Department of Defense.

PAGE 7

Paragraph 3.5.5.1: Delete "in accordance with FED-STD-791, Method No. 3009" and "when filtered through a single filter membrane."

TABLE III: Delete "Microscopic Count" column and its contents.

Paragraph 3.5.5.2: Delete "The same filter element used in 3.5.5.1 for particle size shall be used for this determination."

PAGE 14

TABLE VI: Delete footnote 2/ as well as its reference within the table. Delete footnote 3/ and substitute "Particle contamination shall be measured by the use of automatic particle counters. Direction in the manual for the respective instrument shall be followed." Delete footnote 4/ and substitute "Filtration time will be measured using a single membrane filter."

PAGE 16

Paragraph 5.1, line 7: Delete "Class II" and substitute "Class 8."

PAGE 18

Paragraph 5.2: Delete the warning statement and substitute the following: "Warning: This fluid may contain tricresyl phosphate (TCP) which may be absorbed through the skin and produces paralysis if taken internally. Appropriate protective measures should be taken to avoid such exposures. Decontaminate containers before reuse."

Add the following paragraphs:

"6.7 Disposal actions.

6.7.1 Background. The product may contain 1 percent TCP which may be absorbed through the skin, and produces paralysis if taken internally. Accumulated waste liquids shall have the exterior of the outer pack marked as containing TCP to assist disposal facilities manage the product according to regulations promulgated by the U.S. Environmental Protection Agency under Public Law 94-580, Resource Conservation and Recovery Act of 1976.

6.7.2 Handling and safety precautions. Personnel handling the product shall wear appropriate impervious clothing to prevent repeated or prolonged skin contact. Local appraisal is required for exact health and safety implications and to prescribe precise application of protective clothing. If skin or clothing becomes moistened with the product, personnel shall promptly wash with soap or mild detergent and water. Respirators are not required unless there is an inhalation exposure to mists. Personnel shall wear protective clothing when using the product and when cleaning up spills.

6.7.3 Disposal.

6.7.3.1. Field operations. Depending on the size of spills, paper towels or absorbents shall be used to absorb the liquid. Contaminated soil shall be removed and placed in a box with absorbents or towels. This box with spill clean-up wastes shall either be buried along with ordinary refuse at a rate not to exceed 10 pounds of clean-up waste per spill event or be incinerated in a permitted municipal waste incinerator. Bulk wastes and contaminated liquids shall not be landfilled. Partially full containers of contaminated product shall be collected centrally and stored for later recycle or heat recovery use. State requirements may vary regarding recycle alternatives. Liquids for recycle or heat recovery shall be accumulated by repouring in appropriately sized and labeled larger containers. See paragraph 6.7.3.3 below.

6.7.3.2 Depot-type operations. (See 6.7.3.1.) Additionally, used product that has been drained from hydraulic systems shall be combined with unused but contaminated fluid from partially full containers and then recycled.

6.7.3.3 Container disposal. Tops from one-time-use containers shall be discarded with ordinary refuse. Containers shall be made as empty as possible using gravity draining, after which they shall be crushed and buried in a permitted sanitary landfill or incinerated with general refuse. No special decontamination procedures are required for empty containers or their lids."
