COMMERCIAL ITEM DESCRIPTION

# CLEANING COMPOUND, SOLVENT-DETERGENT

(ALKALINE CLEANER-DEGREASER FOR OVENS, GRILLS AND WASHABLE SURFACES)

The General Services Administration has authorized the use of this commercial item description.

This description covers a non-caustic liquid cleaning compound suitable for spraying on soiled surfaces to remove baked on grease and carbonized soil deposits from ovens, grills, fryers and other washable surfaces.

Salient characteristics.

The product shall be a homogeneous solution containing synthetic detergents, builders and alkali designed to be used to remove grease and carbonized soil from ovens, gills, fryers and other washable surfaces. There shall be no separation, sediment or foreign matter.

Total alkali. The product shall contain not more than 7.0 percent by weight total alkali as sodium oxide when tested as specified in ASTM D 460 sections 19 and 20.

pH. The pH of the undiluted product shall be not less than 12.3 when tested as specified in ASTM E 70.

The issues of the referenced test methods in effect on the date of the solicitation shall be used to determine compliance with stated requirements.

Performance. When tested as follows, the product shall completely remove the soil from 4 porcelain enamel test panels.

The test soil shall consist of:

| | | |
|---|---|---|
| light salted butter (Land O' Lakes) | - | 85.4 percent |
| white granulated sugar | - | 6.9 percent |
| deionized or distilled water | - | 4.3 percent |
| flour (Gold Medal All Purpose Flour) | - | 3.4 percent |

Dissolve the sugar in the water, heating as necessary to completely dissolve the sugar. Add softened butter to the solution and mix thoroughly. Add flour to mixture and stir until a uniform mixture is obtained. Except for dissolving the sugar, the mixing can be done at room temperature.

Apply the soil to the porcelain enamel test panels at a rate of 0.80 g per 20 square inches of panel surface. Spread the soil evenly over the entire top surface of the panels. Place the panels in a baking tray and place another inverted baking tray over the top of the first. Seal the seams with aluminum foil to prevent air currents from disturbing the soil film during baking. Place the trays in a preheated oven at 375 degrees F and bake for 120 minutes. Allow to cool to room temperature.

Place two panels in a vertical position and two panels in a horizontal position. Use a trigger operated sprayer to apply the undiluted product to the soiled panels until the product completely covers the surface of the panels. Allow the panels to sit at room temperature for 30 minutes. Damp sponge lightly and flush with water. Dry the panels, place in original position and repeat the procedure. The product shall completely remove the soil from all four panels.

Labeling. The product shall be labeled with directions for use, and with precaution statements in accordance with the Federal Hazardous Substances Act Regulations (Code of Federal Regulations, Title 16, Part 1500).

Check the source to verify that this is the current version before use.

USDA authorization. The product shall be authorized by the US Department of Agriculture for use in establishments operating under USDA Inspection and Grading Programs. Prospective contractors shall furnish evidence of such authorization to the contracting officer prior to award of the contract.

Net contents. The net contents of the containers shall be not less than that specified in the contract.

Preservation, packaging, packing, labeling and marking. Preservation, packaging, packing, labeling and marking shall be as specified in the contract or order.

Notes:

ASTM Standards are available from the American Society for Testing and Materials, 1916 Race Street, Phildelphia, PA 19103.

Users of this commercial item description shall state in the contract the size containers of cleaning compound required.

Inquiries regarding USDA authorization should be addressed to:

Compounds Evaluation Unit
Chemistry Division, Science, FSQS
US Department of Agriculture
Building 306, BARC-East
Beltsville, MD 20705
(301) 344-2566

DOD INTEREST:

No Interest

PREPARING ACTIVITY:

GSA - FSS
