COMMERCIAL ITEM DESCRIPTION

KEY CHAIN, REEL (DOOR AND DRILL CHUCK KEYS)

The General Services Administration has authorized the use of this commercial item description, for all Federal agencies.

1. SCOPE

1.1. Scope. This commercial item description covers key chain reels for door and drill chuck keys.

2. CLASSIFICATION

2.1 Classification. The key chain reels shall be of the following types as specified in the contract or order.

Type I - Key ring, with belt loop.
Type II - Key ring, with belt clip.
Type III - Drill chuck key, with mounting plate.

3. SALIENT CHARACTERISTICS

3.1 The key chain reels shall consist of a case, spring, chain and ring or chuck key as applicable. All types of key chains shall be corrosion resisting steel or chrome.

3.2 The size of the reel case shall be not less than 2 inches nor more than 2-1/2 inches in length, width or diameter.

3.3 The key ring shall be not less than 1-1/4 inches in diameter.

Beneficial comments, recommendations, additions, deletions, clarifications, etc., and any other data which may improve this document should be sent to: General Services Administration, Engineering Branch (7FXEE), 819 Taylor Street, Fort Worth, TX 76102.

3.4 The key chain shall be of corrosion resisting steel or brass and shall be not less than 21-3/4 inches in length.

3.5 The spring shall be of such length and tension as to reel in and support 8 tumbler type door keys or one drill chuck key firmly against the case, as applicable.

3.6 The end of the chain shall be provided with a swivel or other device to prevent the chain from twisting.

3.7 Type I reel cases shall have a metal loop of sufficient size to accommodate a 1-3/4 inch wide belt. Type II reel case shall have a metal clip for clipping and supporting the key chain reel on the user's belt. Both the loop and clip shall be designed to provide a snug fit or slight grip on the user's belt. Type III reel cases shall have a metal mounting plate with two holes for fastening the key chain reel on machinery.

3.8 Type III key chain reels shall be furnished with a self-ejecting safety key, Jacobs K3 size.

3.9 Key chain reel cases as well as clips, loops or mounting plates as applicable shall be provided with a smooth, even, corrosion-resistant finish.

3.10 Workmanship: The key chain reels shall function smoothly and durable construction. The key chain reels shall be free from defects such as sharp edges, loose plating, burrs, pits, rust, or any other defects which adversely affect appearance, function or serviceability.

4 REGULATORY REQUIREMENTS

4.1 Regulatory Requirements. The offeror/contractor is encouraged to use recovered materials to the maximum extent practicable, in accordance with paragraph 23.403 of the Federal Acquisition Regulation (FAR).

4.2 Metric Products. Products manufactured to metric dimensions will be considered on an equal basis with those manufactured using inch-pound units, provided they fall within the tolerances specified and all other requirements of this document are met. If a product is manufactured to metric dimensions and those dimensions exceed the tolerances specified in inch-pound units, a request should be made to the contracting officer to determine if the product is acceptable.

5. QUALITY ASSURANCE PROVISIONS

5.1 Product Conformance. The products provided shall meet the salient characteristics of this commercial item description, conform to the producer's own drawings, specifications, standards and quality assurance practices and be the same product offered for sale in the commercial market. The Government reserves the right to require proof of such conformance.

5.2 Performance test. Each sample key chain reel shall be attached to a 3 pound weight and cycled through (1) full extension of the chain at a steady velocity (approximately a 3 second stroke), (2) suspension of weight, and (3) retrieval of chain (approximately a 3 second stroke), for 5,000 cycles at an even rate of 10 cycles per minute. Any breaking, binding, halting, or uneven operation shall constitute failure of the sample unit. Additionally, at the conclusion of the test, 8 tumbler type door keys (or equivalent weight) shall be attached to the key ring with the key ring suspended below the case. Failure of the spring to hold the key ring against the case shall constitute failure of the sample unit.

5.3 Drop test. Each sample reel key chain shall be dropped from a height of 5 feet onto a concrete surface. Separation of the case or spring shall constitute failure of the sample unit.

6. PREPARATION FOR DELIVERY

6.1 Preservation, packaging, packing, labeling, and marking. The preservation, packaging, packing, labeling, and marking shall be as specified in the contract or order.

7. NOTES

7.1 Ordering data. Purchasers should select the preferred options permitted herein and include the following information in procurement documents (if applicable).

a. Title, number and date of this commercial item description.
b. Type I, II, or III.
c. The preservation, packaging, packing, labeling, and marking desired.

7.2 Part Numbering. Key chain reels conforming with this commercial item description shall be identified by a part number configuration consisting of identification of a portion of the specification number and type. An example of the part number configuration is shown below. This part numbering system is intended for identification and cross-indexing of the item within the Federal cataloging system. Part numbers are not required to be placed on the product or container.
