DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

1. TITLE	2. IDENTIFICATION NUMBER
Stocked Item Storage and Serviceability Analysis	DI-MISC-80489

3. DESCRIPTION / PURPOSE

3.1 The Stocked Item Storage and Serviceability Analysis provides the data necessary to assess the storage and serviceability requirements for stocked items taking into consideration both the item(s) and any packaging associated with the item(s).
3.2 The data is used in the preparation of Storage Serviceability Standards and in the development of predictive life measurement techniques.

4. APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a DTIC APPLICABLE	6b GIDEP APPLICABLE
871105	A/AMCCOM/QAC		

7. APPLICATION / INTERRELATIONSHIP

7.1 This Data Item Description contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated the contract.

7.2 This Data Item Description is related to DI-L-1423 and supersedes DI-MISC-80058.

8. APPROVAL LIMITATION	9a APPLICABLE FORMS	9b AMSC NUMBER
		A4269

10 PREPARATION INSTRUCTIONS

10.1 Format. The Stocked Item Storage and Serviceability Analysis shall be in the contractor's format.

10.2 Content. The Stocked Item Storage and Serviceability Analysis content shall be as follows:

10.2.1 Introduction. Description of the purpose and intended use of the Stock Item Storage and Serviceability Analysis.

10.2.2 Stocked Item(s) and Associated Packaging. Identify the stocked item(s) or item categories and associated packaging covered by the Stocked Item Storage and Serviceability Analysis.

10.2.3 Critical components and materials. Identify critical components and materials (include energetic materials) of the stocked item(s) and associated item packaging with regard to the anticipated storage, age, and environmental conditions (including shock and vibration, etc.). Include reason(s) for identification as critical.

10.2.4 Deteriorative components and materials. Identify deteriorative components and materials (include energetic materials) of the stocked item(s) and associated packaging with regard to major/critical characteristics which deteriorate with storage, age, or environmental conditions (including shock and vibration, etc.). Include reason(s) for identification as deteriorative.

Block 10 Preparation Instructions (Continued)

10.2.4.1 Background, methodology, limits, procedures, and tests. Delineate the following for the stocked item(s) and associated item packaging:

a. Background information regarding deteriorative components and materials of the stocked item(s) and item packaging.

b. Methodology used to determine the degree of deterioration in quantitative terms and the limits which can be set as the determination points for serviceable and unserviceable stocked item(s) and associated packaging.

c. Procedures for periodic field inspections and tests including test recall and serviceability evaluations. The procedures shall include recommended quantity of stocked items and associated packaging to be tested, specific test(s) to be performed, and acceptable level(s) of performance for the parameter(s) under test.

10.2.5 Materials compatibility. Description of the compatibility of materials contained in stocked item(s) and contained in associated packaging when stored as recommended. Include procedures, test methods, and analyses to assure that materials are compatible to preclude malfunctioning or deterioration of the stocked item(s) and associated packaging.

10.2.6 Shelf-life and inspection frequency. Delineate the following for the stocked item(s) and associated item packaging:

a. Background information.

b. Procedures used to establish test methodology and quantitative limits.

c. Test methodology, test technique(s) and test equipment(s) used to measure deterioration. Method(s) used to determine effects of deterioration of critical components and deteriorative components identified.

d. Data acquired (trials, successes, environmental conditions, degree of deterioration in quantitative terms). Expected rate of deterioration at each storage condition. Limits of each item (critical or deteriorative) in quantitative terms beyond which a malfunction will occur.

e. Shelf-life codes in accordance with the following:

Shelf-life codes shall be assigned to identify the period of time, beginning with the date of manufacture, cure, assembly and terminated by a date by which the item and associated packaging must be used or be subjected to inspection, test, restorative, or disposal action. Alpha-numeric shelf-life codes shall be assigned to indicate storage time period and shelf-life type. Table I delineates the applicable shelf-life codes. Determination of shelf-life codes for an assembly shall be based on an evaluation of the whole assembly and associated packaging. Where age is computed by a quarter of a year, the quarter in which the item and associated packaging was assembled is not counted. Such items and associated packaging are not to be considered one-quarter old until the end of the month and year of expiration on the label, the item and associated packaging expires on the last day of that month.

10 Preparation Instructions (Continued)

f. The following definitions are applicable to Shelf-life codes:

Type I Shelf-life Item. An item (including packaging) of supply which is determined, through an evaluation of technical test data or actual experience, to have a definite nonextendable period of shelf-life.

Type II Shelf-life Item. An item (including packaging) of supply having an assigned shelf-life time period which may be extended after the completion of prescribed inspection, test or restorative action.

TABLE I. Shelf-life codes

SHELF-LIFE CODES		
Shelf-life Period	Type I	Type II
Non-deteriorative	O	O
1 month	A	
2 months	B	
3 months	C	1
4 months	D	
5 months	E	
6 months	F	2
9 months	G	3
12 months	H	4
15 months	J	
18 months	K	5
21 months	L	
24 months	M	6
27 months	N	
30 months	P	
36 months	Q	7
48 months	R	8
60 months	S	9

g. Inspection Frequency Codes shall be in accordance with the following:

Inspection Frequency Codes shall be assigned based upon the criticality of the item (including packaging) and the storage environment. Inspection frequency codes apply to items and associated packaging inspected at regular intervals; they are based upon storage environment, and they shall be included as guidance for storage activities. Variances in established inspection frequencies shall b made on an item-by-item basis and shall be noted as being an exception. Table I. delineates the applicable inspection frequency codes.

10 Preparation Instructions (Continued)

TABLE II. Inspection frequency codes

INSPECTION FREQUENCY CODES	
Code	Interval
5	60 months
4	30 months
3	24 months
2	12 months
1	6 months

g. Type Storage Codes shall be in accordance with the following:

Type Storage Codes shall be assigned to items and associated packaging to indicate the recommended type of storage. Table III delineates the applicable type storage codes.

TABLE III. Type storage codes

TYPE STORAGE CODES	
Code	Explanation
A	Heated warehouse space (general purpose)
B	Unheated warehouse space (general purpose)
C	Controlled humidity warehouse space
E	Chill space
G	Shed nonwarehouse space
Q	Hazardous commodity space (non-Class B items, e.g., acids, compressed gases, or radioactive)
U	Open space (material may be stored in open storage)
Y	Storage space for ammunition items (Class V)

10.2.7 Conclusions and recommendations. Summary conclusions and recommendations to include method(s) of permanent marking of the stocked item(s) and associated packaging identified in 10.2.3 and 10.2.4 and other information which impacts on storage life expectancy of the stocked item(s) and associated packaging.
