DATA ITEM DESCRIPTION

Form Approved
OMB No. 0704-0188

2. TITLE	1. IDENTIFICATION NUMBER
Installation-Engineering Plan	DI-QCIC-80509

3. DESCRIPTION / PURPOSE

3.1 The plan is required to define and explain the engineering method and procedures to be used by the contractor, and to present the system design in terms of work statement requirements. It provides the Government with the opportunity to monitor and review the contractor's engineering efforts and to determine performance-cost tradeoffs that may be required.

4. APPROVAL DATE (YYMMDD)	5. OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a. DTIC REQUIRED	6b. GIDEP REQUIRED
880121	F/AFCC/1842EEG		

7. APPLICATION / INTERRELATIONSHIP

7.1 This DID contains the format and content preparation instructions for the data generated by the specific and discrete task requirement as delineated in the contract.

7.2 This DID supersedes DI-S-3562A.

8. APPROVAL LIMITATION	9a. APPLICABLE FORMS	9b. AMSC NUMBER
		F4296

10. PREPARATION INSTRUCTIONS

10.1 Content. The Installation-Engineering Plan shall contain the following:

10.1.1 Listing of Major and Minor Equipment to be Installed. This listing shall contain a brief functional description of each item, its operating characteristics, and any abnormal criteria required for installation.

10.1.2 Siting Considerations. The siting considerations shall cover three primary areas of consideration: electronic, logistic, and geographic (environmental) information.

10.1.3 Engineering Implementation Schedules. These schedules shall cover milestone dates such as delivery of contractor furnished equipment (CFE) and Government furnished equipment (GFE); installation; number, type, and length of required tests; interface with other systems; and test schedules to prove adequate interface performance.

10.1.4 Supporting Structures. Structural-type information shall include the requirement for new structures and the criteria that may require reselection of space or redesign of existing structural space. This information shall cover both inside and outside plant and include information on required floor space, electronic requirements, total outside area, support structures, spacing, and wind loading. Floor plan drawings shall show all existing equipment as well as equipment to be installed, air conditioning requirements, etc.

(Continued on Page 2)

11. DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

Block 10, Preparation Instructions (Continued)

10.1.5 Power Requirements. Power requirements shall cover a detailed descriptive listing of cables, ducts, trenches, etc. A drawing shall show power distribution for major equipments.

10.1.6 Planned Layout. This section shall contain the criteria for the planned equipment layout, a block diagram to show signal flow, considerations of radio frequency interference and radiation effects, interface tie-ins, and allied considerations such as efficiency of the proposed configuration in terms of access requirements for operation, maintenance, installation, and removal. Included will be consideration of space between equipments -- walls -- ceiling, plus recommended distances between power and communication lines. Reference shall be made to all applicable system drawings, and recommendations for maximum -- minimum configurations.

10.2 Format. The contractor's format is acceptable.
