DATA ITEM DESCRIPTION

Title: ENGINEERING CHANGE PROPOSAL SYSTEM SAFETY REPORT (ECPSSR)

Number: DI-SAFT-80103D

Approved Date: 20250715

AMSC Number: F10581

Limitation: N/A

DTIC Applicable: No

GIDEP Applicable: No

Preparing Activity: 40 (AFMC/SE)

Project Number: SAFT-2025-003

Applicable Forms: N/A

Use/Relationship: The Engineering Change Proposal System Safety Report (ECPSSR) is used for each Engineering Change Proposal (ECP) or Change Notice (CN) to document the safety impacts over the system life cycle associated with the introduction of the proposed engineering change into the design. This may include additional supporting documentation such as analyses, test results, and trade-off studies.

a. This Data Item Description (DID) contains the content and format preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

b. This DID is related to DI-SAFT-80101, *System Safety Hazard Analysis Report (SSHAR)*; DI-SAFT-80102, *Safety Assessment Report (SAR)*; DI-SAFT-80104, *Waiver or Deviation System Safety Report (WDSSR)*; DI-SAFT-80105, *System Safety Program Progress Report (SSPPR)*; DI-SAFT-80106, *Health Hazard Assessment Report (HHAR);* and DI-SAFT-82085*, Hazard Tracking System (HTS) Data*..

(Copies of these DIDs are available online at https://quicksearch.dla.mil.)

c. This DID supersedes DI-SAFT-80103C.

Requirements:

1.Reference documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2.Format. The ECPSSR shall be in the contractor's format.

3.Content. The ECPSSR shall include the following information resulting from a review of each ECP.

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T10:34Z
Check the source to verify that this is the current version before use.

3.1. The reason for the ECP.

3.2. A list, in narrative or tabular form, of all hazardous areas associated with the ECP. Each hazardous area shall describe how the hazardous area would impact the system design.

3.3. A list of existing hazards in the Hazard Tracking System (HTS) that would be impacted by the ECP.

3.3.1. These impacts may be positive (e.g. a reduction of risk in the form of additional hazard controls) or negative (e.g. an increase of risk or reduction of the effectiveness of a hazard control).

3.3.2. For each identified hazard, an estimate of how the hazard's MIL-STD-882E(C1) Table III Risk Assessment Code (RAC) could be affected by the ECP.

3.4. If there are previously identified hazards associated with the ECP, these hazards shall be included in a tabular form that accounts for the same information as in the HTS to include the RAC

3.4.1. If it is determined that there are no hazards, a description of the analysis process and factors which allowed this conclusion shall be included.

3.5. The safety impact of the ECP upon the existing system that summarizes all hazardous areas and impacted hazards.

3.6. An identification of any update(s) of existing hazard analyses required to incorporate the effect(s) of the engineering change if the change is authorized.

3.7. A listing of all of the software impacted by the ECP.

3.7.1. For each unit of software identified, an estimation of potential impacts to the Software Control Category (SCC), Software Criticality Index (SwCI) and associated Level of Rigor (LOR) task activities.

3.7.2. An identification of any update(s) to LOR task activities required to incorporate the effect(s) of the engineering change if the change is authorized.

End of DI-SAFT-80103D
