MIL-D-46582C(AR)
18 FEBRUARY 1983
SUPERSEDING
MIL-D-46582B(MU)
25 May 1972

MILITARY SPECIFICATION

DETONATORS, STAB, M57A1 and M57A2

This specification is approved for use by the US Army Armament Research and Development Command, and is available for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers the metal parts and the loading, assembling and packing of M57A1 and M57A2 detonators for use in Fuze, PD, M505A3.

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specifications and standards. Unless otherwise specified (see 6.2), the following specifications and standards of the issue listed in that issue of the Department of Defense Index of the Specifications and Standards (DoDISS) specified in the solicitation, form a part of this specification to the extent specified herein.

SPECIFICATIONS

MILITARY

MIL-A-48078 - Ammunition, Standard Quality Assurance Provisions, General Specification for.

STANDARDS

MILITARY

MIL-STD-105 - Sampling Procedures and Tables for Inspection by Attributes

MIL-STD-109 - Inspection Terms and Definitions

FSC 1305

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, US Army Armament Research and Development Command, Attn. DRDAR-QA, Dover, New Jersey 07801 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMCR 715-505 - Ammunition Ballistics Acceptance Test Methods, Volume 8, Test Procedures for 20mm Cartridges

(Copies of specifications, standards, handbooks, drawings and publications required by manufacturers in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the Contracting Officer.)

2.1.3 Other publications. The following document forms a part of this specification to the extent specified herein. Unless otherwise indicated, the issue in effect on date of invitation for bids or request for proposal shall apply.

INTERSTATE COMMERCE COMMISSION

49 CFR 71-90 - Rules and Regulations of the Transportation of Explosives and Other Dangerous Articles

The Interstate Commerce Commission regulations are now a part of the Code of Federal Regulations (1966 edition and revision) available from the Superintendent of Documents, Government Printing Office, Washington, DC 20402. Orders for the above publications, cite 49 CFR 71-90 (latest revision).

2.1.4 Order of precedence. In the event of a conflict between the text of this specification and the reference cited herein, the text of this specification shall take precedence.

3. REQUIREMENTS

3.1 Material. Material shall be in accordance with the applicable drawings (dwgs.) and specifications.

3.2 Components. The components and assemblies shall comply with the requirements specified on dwg. 7259017 or dwg. 7259083 (as applicable), referenced specifications and other requirements specified herein.

3.3 Manufacturing process. All parts and assemblies shall be manufactuerd by a process approved by the Contracting Officer and no deviation from that process shall be made without his prior approval (see 6.3).

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T06:22Z
Check the source to verify that this is the current version before use.

3.4 Insensitivity. The detonator shall not fire when subjected to the impact specified on dwg. 7259017 or 7259083, as applicable.

3.5 Sensitivity. The detonator shall fire when subjected to the impact specified on dwg. 7259017 or 7259083, as applicable.

3.6 Output. The detonator shall produce an indentation in the witness block as specified by dwg. 7259017 or 7259083, as applicable.

3.7 First article inspection. This specification contains technical provisions for first article inspection. Requirements for the submission of the first article samples by the contractor shall be as specified in the contract.

3.8 Workmanship. The requirements for workmanship are as specified by applicable drawings, referenced specifications and the following:

3.8.1 Processing defects. The metal parts and assemblies shall be free of cracks, splits, ruptures, perforations, dents, deformities, exposed explosive and other forms of substandard workmanship.

3.8.2 Cleanliness. All components and assemblies shall be free of foreign matter, such as oil, grease, corrosion, dirt, chips, etc.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection and standard quality assurance provisions. Unless otherwise specified herein or in the contract, the provisions of MIL-A-48078 shall apply and are hereby made a part of this detail specification.

4.2 Classification of inspections. The following types of inspections shall be conducted on this item:

a. First Article Inspection (4.3)

b. Quality Conformance Inspection (4.4)

4.3 First article inspection.

4.3.1 Submission. The contractor shall submit a first article sample as designated by the Contracting Officer for evaluation in accordance with the provisions of 4.3.2. The first article sample shall consist of the items specified in Table I.

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T06:22Z
Check the source to verify that this is the current version before use.

4.3.2 Inspections to be performed. See MIL-A-48078 and Table I herein.

4.3.3 Rejection (see MIL-A-48078). Failure of the original first article sample to be in accordance with applicable drawings and the requirements of paragraph 3, as specified herein, shall result in sample disapproval.

4.4 Quality conformance inspection.

4.4.1 Inspection lot formation. Inspection lots shall comply with the lot formation provisions of MIL-A-48078.

4.4.2 Examination. See MIL-A-48078.

a. Unless otherwise specified in the classification of defects and tables, sampling plans for major and minor defects shall be in accordance with MIL-STD-105, Inspection Level II.

b. To determine product acceptability, major and minor defects as listed herein may be considered collectively on a class basis or defects may be considered individually. When a class basis is utilized the acceptable quality level (AQL) for major defects shall be 1.50% and the AQL for minor defects shall be 2.50%. However, when major defects are considered collectively on a class basis, the AQL for any individual defect shall be limited to .40%. In addition, where three or less defects appear in a classification, sampling plans applicable to a class shall not be used for major defects (see 6.7).

4.4.3 Testing. The tests listed in Table II shall be performed on each lot in accordance with the test methods specified by 4.5. The sampling plans for the various tests shall be as specified by Table II. For acceptance, the results of each test shall comply with the applicable requirement(s).

TABLE II

Test	Test Equipment	Sample Size - Production Lot	Requirement Paragraph
Insensitivity	7259405 1/	300	3.4
Sensitivity	7259405 2/	200	3.5
Output	7259405 3/	100	3.6

1/ If one or more of the sample detonators function in this test, the lot shall be rejected.

2/ Failure of three or more sample detonators to function in this test shall be cause for rejection of the lot. If one or two detonators fail to function, a second sample consisting of the same number of detonators as specified for the first sample, shall be tested. If in the accumulated samples, three or more detonators fail to function the lot shall be rejected.

3/ Failure of three or more sample detonators to comply with the applicable output requirement, shall be cause for rejection of the lot. If one or two detonators fail to comply with the applicable output requirement, a second sample consisting of the same number of detonators as specified for the first sample, shall be tested. If in the accumulated samples, three or more detonators fail to comply with the applicable output requirement, the lot shall be rejected.

4.4.4 Inspection equipment. The inspection equipment required to perform the examinations and tests prescribed herein is described in the "Paragraph Reference/Inspection Method" column in the tables starting with paragraph 4.4.2. The contractor shall submit for approval, inspection equipment designs in accordance with the terms of the contract. See Section 6 of MIL-A-48078 and paragraph 6.2 herein.

4.4.5 Packaging, packing and marking inspection. Packaging, packing, and marking inspection shall comply with the requirements of 4.4.2.3, 4.4.2.4, 4.4.2.5, 4.4.2.6 and 4.4.2.7.

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T06:22Z
Check the source to verify that this is the current version before use.

4.5 Test methods and procedures.

4.5.1 Insensitivity. The method of test shall be as prescribed by AMCR 715-505, Volume 8. A detonator which functions shall be classed defective.

4.5.2 Sensitivity. The method of test shall be as prescribed by AMCR 715-505, Volume 8. A detonator which fails to function shall be classed defective.

4.5.3 Output. The method of test shall be as prescribed by AMCR 715-505, Volume 8. This test may be conducted concurrently with the test of 4.5.2 for function, applying the test results of the first 100 functioning detonators for output evaluation. Detonators which fail to function for output evaluation shall be replaced without lot penalty, to assure the testing of the specified sample size. In the event that the first 100 detonators fail to comply with the minimum output requirement, the 100 detonators remaining to complete the function test shall also apply as the second sample authorized for the output test. A detonator which functions but fails to comply with the minimum output requirement of 3.6, as applicable to the detonator model, shall be classed defective.

5. PREPARATION FOR DELIVERY

5.1 Preservation and packaging.

5.1.1 Level A. the detonator shall be packaged in accordance with dwgs. 9258182 and 9258183.

5.2 Packing.

5.2.1 Level A. The detonator shall be packed as specified in dwg. 9258184.

5.3 Marking. Detonator containers and bags shall be marked in accordance with instructions contained on dwgs. 9258182, 9258183, and 9258184.

6. NOTES

6.1 Ordering data. See MIL-A-48078.

6.2 Submission of inspection equipment for design approval (see MIL-A-48078). Submit designs as required to Commander, US Army Armament Research and Development Command, ATTN: DRADR-QAF-I, Dover, NJ 07801.

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T06:22Z
Check the source to verify that this is the current version before use.

6.3 Process deviation. A process deviation is defined as a change in the approved basic method of manufacture, or an operational change which alters the metallurgical or physical properties of the item.

6.4 First article sample. When an initial production sample is required by the contract, the Contracting Officer shall notify the testing facility when to proceed with the insensitivity, sensitivity and output tests (see 4.3).

6.5 Shipment. Requirement of paragraph 5 and associated inspection paragraphs apply only if interplant shipment of detonators is required by the contract.

6.6 Safety data. For safety data requirements, refer to safety data document as listed on appropriate product drawings.

6.7 Intermediate point inspections. The classification of defects identifies the defect characteristics (among other things) for acceptance inspection. It may be necessasry to modify the sequence of inspection stations to best suit the manufacturing process. Inspection for defect characteristics which will be hidden or altered by subsequent processing operations (including unrelated operations), should be scheduled to prevent premature acceptance.

6.8 Drawings. Drawings listed in Section 2 of this specification under the heading US Army Armament Research and Development Command (ARRADCOM) may also include drawings prepared by, and identified as, Edgewood Arsenal, Frankford Arsenal, Rock Island Arsenal or Picatinny Arsenal drawings. Technical data originally prepared by these activities are now under the cognizance of ARRADCOM.

6.9 Changes from previous issue. Asterisks are not used in this revision to identify changes with respect to the previous issue due to the extensiveness of the changes.

STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL

INSTRUCTIONS: This form is provided to solicit beneficial comments which may improve this document and enhance its use. DoD contractors, government activities, manufacturers, vendors, or other prospective users of the document are invited to submit comments to the government. Fold on lines on reverse side, staple in corner, and send to preparing activity. Attach any pertinent data which may be of use in improving this document. If there are additional papers, attach to form and place both in an envelope addressed to preparing activity. A response will be provided to the submitter, when name and address is provided, within 30 days indicating that the 1426 was received and when any appropriate action on it will be completed.
NOTE: This form shall not be used to submit requests for waivers, deviations or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
