ADOPTION NOTICE

ISO/IEC 16085: 2006, **Systems and software engineering – Life cycle process – Risk Management**, was adopted on 30-JUL- 2009 for use by the Department of Defense (DoD). For suggestions or queries by DoD activities, please contact the Systems Engineering office of the DoD Adopting Activity: ODDR&E, 3030 Defense Pentagon, 3B938, Washington D. C. 20301-3090.

Copies of this document may be purchased from http//:webstore.ansi.org or International Organization for Standardization, 25 West 43rd Street, New York, NY 10036, (212) 642.4900. Check for DOD discount.

SO/IEC 16085 defines a process for the management of risk in the life cycle. It can be added to the existing set of system and software life cycle processes defined by ISO/IEC 15288 and ISO/IEC 12207, or it can be used independently. ISO/IEC 16085 can be applied equally to systems and software.

Risk management is a key discipline for making effective decisions and communicating the results within organizations. The purpose of risk management is to identify potential managerial and technical problems before they occur so that actions can be taken that reduce or eliminate the probability and/or impact of these problems should they occur. It is a critical tool for continuously determining the feasibility of project plans, for improving the search for and identification of potential problems that can affect life cycle activities and the quality and performance of products, and for improving the active management of projects.

ISO/IEC 16085 was prepared by Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 7, Systems and software engineering.

This second edition cancels and replaces the first edition (ISO/IEC 16085:2004), which has been technically revised. It is also published as IEEE Std 16085:2006.
