FEDERAL SPECIFICATION

WORCESTERSHIRE SAUCE

This specification was approved by the Commissioner, Federal Supply Service, General Services Administration, for the use of all Federal agencies.

1. SCOPE

1.1 Worcestershire sauce covered by this specification shall be a ready-to-use product for use by agencies of the Federal Government.

2. APPLICABLE DOCUMENTS

2.1 The following documents, of the issue in effect on date of invitation for bids or request for proposal, form a part of this specification to the extent specified herein:

Federal Specifications:

PPP-C-96	-	Cans, Metal, 28 Gage and Lighter.
PPP-G-460	-	Glass Containers, One Gallon Capacity and Smaller, for Other Than Medicinal Products; Packaging and Packing Of.

(Activities outside the Federal Government may obtain copies of Federal Specifications, Standards, and Handbooks as outlined under General Information in the Index of Federal Specifications and Standards and at the prices indicated in the Index. The Index, which includes cumulative monthly supplements as issued, is for sale on a subscription basis by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FSC 8950

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:43Z
Check the source to verify that this is the current version before use.

(Single copies of this specification and other Federal specifications required by activities outside the Federal Government for bidding purposes are available without charge from Business Service Centers, at the General Services Administration Regional Offices in Boston, New York, Washington, DC, Atlanta, Chicago, Kansas City, MO, Ft. Worth, Denver, San Francisco, Los Angeles and Seattle, WA.

(Federal Government activities may obtain copies of Federal Specifications, Standards, and Handbooks and the Index of Federal Specifications and Standards from established distribution points in their agencies.)

Military Specification:

MIL-L-35078 - Loads, Unit: Preparation of Nonperishable Subsistence.

Military Standards:

MIL-STD-105 - Sampling Procedures and Tables for Inspection by Attributes.
MIL-STD-668 - Sanitary Standards for Food Plants.

(Copies of specifications and standards required by suppliers in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

LAWS AND REGULATIONS

US Department of Health, Education and Welfare

Federal Food, Drug, and Cosmetic Act and Regulations Promulgated Thereunder.

Part 128 of the Code of Federal Regulations, Title 21.

(Application for copies should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.)

US Department of Agriculture

United States Standards for Condition of Food Containers.

(Application for copies should be addressed to the Information Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC 20250.)

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:43Z
Check the source to verify that this is the current version before use.

2.2 Other publications. The following documents form a part of this specification to the extent specified herein. Unless a specific issue is identified, the issue in effect on date of invitation for bids or request for proposal shall apply:

National Research Council

Food Chemicals Codex

(Application for copies should be addressed to the Office of Director, National Academy of Sciences, National Research Council, 2101 Constitution Ave., N.W., Washington, DC 20418.)

Association of Official Analytical Chemists

Official Methods of Analysis of the Association of Official Analytical Chemists.

(Application for copies should be addressed to the Association of Official Analytical Chemists, P.O. Box 540, Benjamin Franklin Station, Washington, DC 20044.)

(Technical society and technical association specifications and standards are generally available for reference from libraries. They are also distributed among technical groups and using Federal agencies.)

3. REQUIREMENTS

3.1 Materials. All materials used in the manufacture of Worcestershire sauce shall be clean, sound and of good quality.

3.1.1 Vinegar. Vinegar shall be a malt vinegar or combination of malt and distilled vinegar in a 50:50 ratio, with or without sweetening ingredients.

3.1.2 Hydrolyzed vegetable protein. Hydrolyzed vegetable protein shall be a dark reddish-brown sauce produced by hydrolyzing or digesting soy, corn, wheat or other cereal derived protein with acids, then neutralizing, filtering and aging. It shall have typical analyses as follows:

Solids	38.0 - 42.0 percent
Salt (as NaCl)	17.0 - 18.0 percent
Protein (Nx6.25)	Not less than 13.7 percent
pH	5.0 - 5.6

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:43Z
Check the source to verify that this is the currenversion before use.

3.1.3 Sugar. Sugar shall be white or brown refined cane or beet sugar or a combination thereof. Alternatively, liquid sugar or corn sugar may be used. The corn sugar derivative (corn syrup in high fructose sugar), when used, shall comply with the soluble solids of the finished products.

3.1.4 Spices (ground). Ground spices shall be of full strength and shall be typical in appearance, flavor, odor, and pungency, as applicable, of the spice specified.

3.1.5 Garlic, dehydrated, powdered (or garlic oil). Dehydrated garlic powder shall have characteristic pungent garlic flavor and odor. It shall be free from scorched, musty or other objectionable odors. Alternatively, when garlic oil is used, it shall be spray dried natural garlic oil encapsulated with gum arabic and diluted with dextrose carrier.

3.1.6 Onion, dehydrated, powdered (or onion oil). Dehydrated onion powder shall be uniformly ground and shall be derived from white varieties having prominent pungent characteristics. Alternatively, when onion oil is used it shall be spray dried onion oil encapsulated with gum arabic and diluted with dextrose carrier.

3.1.7 Extract of gentian root. Extract of gentian root shall be a hydro-alcoholic extract prepared from the root of Gentian luteal. The extract is dark brown in color and possesses a strong aromatic odor and a slightly sweet, then strongly bitter taste.

3.1.8 Molasses. Molasses shall be a light to dark brown syrup obtained from beat or cane sugar.

3.1.9 Caramel color. Caramel color shall be the liquid or powdered derivative of burnt sugar.

3.1.10 Tamarind concentrate. Tamarind concentrate shall be a concentrated, water soluble extract of ripe fruit derived from the tamarind tree (Tamarindus indica). The tamarind concentrate shall be standardized to a characteristic color, odor and taste and shall have the following analyses:

pH	- 2.5 - 3.5
Acidity	- Not less than 15.0 percent calculated as tartaric acid.
Soluble solids	- Not less than 80 percent.

3.1.11 Anchovy paste. The anchovy paste shall consist of smoothly ground, properly and fully cured anchovies (no heads or intestines) with brown sugar

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:43Z
Check the source to verify that this is the currentversion before use.

added. The anchovy paste is prepared from genuine cured anchovies, exclusively from the fish of the species Engraulis Encrasiocholus, Linnaeus of the clupeid family, by a process of salting and fermentation. It shall have the following analyses:

Salt	- 22.0 to 28.0 percent
Fat	- 3.0 percent minimum

3.1.12 Salt. Salt shall be white, refined sodium chloride with or without anticaking agent. Iodized and ammonium salts shall not be used.

3.1.13 Lemon oil. Lemon oil shall comply with the Food Chemicals Codex.

3.2 Formula. Worcestershire sauce shall be prepared according to the following formula:

Ingredients	Parts by weight
Vinegar	Not less than 40.0
Hydrolyzed vegetable protein	Not less than 9.0
Water	Not more than 22.0
Molasses	Not more than 16.0
Sugar	4.0 - 5.0
Tamarind concentrate	2.0
Anchovy paste	2.2
Black pepper, ground	0.2 - 0.3
Allspice, ground	0.07
Nutmeg, ground	0.06
Cloves, ground	0.05
Coriander, ground	0.05
Red pepper, ground	0.08 - 0.10
Garlic, powder (or garlic oil)	0.04
Cinnamon, ground	0.01
Caramel color 1/	
Onion powder (or onion oil)	0.36
Extract of gentian root	0.50
Salt	1.2 - 1.5
Lemon oil	0.10

1/ Caramel color may be used to enhance the color. The use of caramel color may be adjusted by deducting from the percentage of water.

3.3 Processing. All ingredients, except spices, flavoring(s) and vinegar shall be mixed and cooked to a temperature of 185°F to 195°F (85°C to 90°C). After cooking, spices, flavoring(s) and vinegar shall be added

Source: https://assist.dla.mil -- Downloaded: 202610-26T11:43Z
Check the source to verify that this is the currentversion before use.

and thoroughly mixed into the batch. Any alternative method of mixing ingredients giving equivalent results in the finished product is permissible. The batch shall then be passed through a finisher having a screen opening not larger than 0.027 inch (0.686 mm). The sauce shall be bottled hot at a minimum temperature of 185°F (85°C) without impairing quality so as to result in preservation of the product.

3.4 Finished product. The finished product shall be a brown to dark brown colored liquid having a pleasant, tart, peppery fruit-spice flavor and should possess the body and character typical of this sauce. The Worcestershire sauce shall meet the following analytical requirements when tested as specified in 4.5:

Nonvolatile solids	Not less than 20.0 percent
Protein (NX6.25)	Not less than 9.0 percent
Salt (as NaCl)	Not less than 2.5 nor more than 3.5 percent
Titratable acidity (as acetic acid)	Not less than 2.8 nor more than 3.3 percent
pH	Not less than 3.5 nor more than 3.8
Total sugars (as invert)	Not less than 17.0 nor more than 18.0 percent

3.5 Federal Food, Drug, and Cosmetic Act. All deliveries shall conform in every respect to the provisions of the Federal Food, Drug, and Cosmetic Act and Regulations Promulgated Thereunder.

3.6 Workmanship. The product shall be prepared in accordance with part 128 of the Code of Federal Regulations, Title 21, Human Foods, Current Good Manufacturing Practice (Sanitation), Processing, Packing and Holding. In addition for Military agencies, the product shall be processed in establishments meeting the requirements of MIL-STD-668.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the supplier is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or order, the supplier may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:43Z
Check the source to verify that this is the current version before use.

reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.2 Preacceptance inspection (plant sanitation inspection).

4.2.1 Civil agencies. When specified (see 6.1), inspection of plants producing the product will be conducted upon request of the contracting officer to the appropriate Government inspection agency. Award of contracts will be limited to establishments known to maintain proper sanitary conditions or which have received prior sanitary approval recommended by the inspection agency.

4.2.2 Military agencies. The product shall be rejected if produced in plants not meeting the requirements of 3.6.

4.3 Acceptance inspection.

4.3.1 Condition inspection of containers. When inspection of product for quality and condition is performed by the US Department of Agriculture, the United States Standards for Condition of Food Containers shall apply. For applicable criteria governing condition inspection of containers for Military agencies see 4.3.5.

4.3.2 Sampling for inspection. Sampling for inspection and acceptance shall be performed in accordance with MIL-STD-105, except as otherwise indicated herein.

4.3.3 Components and material inspection. In accordance with 4.1 components and materials shall be inspected in accordance with all the requirements of referenced specifications, drawings, and standards unless otherwise excluded, amended, modified or qualified in this specification or applicable document.

4.3.3.1 Examination of ingredients. Examination of ingredients shall be in accordance with 4.3.3.1.1 and 4.3.3.1.2. Noncompliance with identity requirements of one or more sample units not complying with condition requirements shall indicate an unacceptable ingredient and use of such shall be cause for rejection of the involved finished product.

4.3.3.1.1 Identity. Conformance of ingredients to identity (kind) shall be ascertained by examination of pertinent labels, invoices, or other valid documents.

4.3.3.1.2 Condition. Each ingredient shall be examined organoleptically, as necessary, to determine compliance with 3.1 and condition requirements as may be contained in the applicable ingredient requirement paragraph. The

Check the source to verify that this is the current version before use.

sample unit for examination shall be approximately 8 ounces (227 g) of each dry ingredient and approximately 4 fluid ounces (118 ml) of each liquid ingredient extracted from a primary container. The sample size shall be five containers. In the event a lot consists of less than five containers, a sample unit shall be extracted from each container in the lot.

4.3.3.2 Testing of components. Testing of components described in this specification and changes listed in subsidiary specifications shall be as shown in table I. Test requirements shall be lot average requirements. Nonconformance to one or more test requirement shall be cause for rejection of the component lot.

TABLE I. Testing of components (see 4.3.3)

Component	Sample unit	Lot size expressed in	Inspection level	Characteristics	Results reported to nearest	Test ref & rqmt para
Hydrolyzed vegetable protein	One pint composite (473 ml)	Quarts (liters)	1/	Solids	0.1 percent	3.1.2 4.5.2.1
				Salt	0.1 percent	
				Protein	0.1 percent	
				pH	0.1	
Tamarind	8 ounce composite (237 ml)	Quarts (liters)	1/	pH	0.1	3.1.10
				acidity	0.1 percent	4.5.2.1
				Soluble solids	1.0 percent	
Anchovy paste	8 ounce composite (237 ml)	Pounds (kg)	1/	Salt	0.1 percent	3.1.11
				Fat	0.1 percent	4.5.2.1
Caps	Caps	Caps	S-1	Tinplate	0.01 pound (gram)	5.1.1

1/ Derived from five primary containers or all containers if less than five form a lot.

4.3.4 Process examination. Unless otherwise specified (see 6.1), examination shall be performed during processing to determine compliance with formulation requirements of 3.2 and processing requirements of 3.3. Formulation records shall be maintained. Nonconformance with formulation or processing requirements shall be cause for rejection of the involved finished product.

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:43Z
Check the source to verify that this is the current version before use.

4.3.5 Examination of end item. Examination shall be in accordance with tables III through VII, 4.3.5.1 and 4.3.5.2. Sampling plans for the tables of examination shall be in accordance with table II. The acceptable quality levels (AQLs) shall be expressed as defects per hundred units for table III and V and percent defective for tables IV, VI and VII.

TABLE II. Sampling plans and acceptance criteria

Table	Sample unit	Lot size expressed in	Inspection level	AQLs		
				Major A	Major B	Minor
III	One filled and closed bottle	Bottles	I	0.25	1.5	6.5
IV	One filled bottle	Bottles	S-3	--	--	1.5
V	One filled bottle	Bottles	S-2	--	1.0	--
VI	One labeled bottle	Bottles	S-2	--	--	2.5
VII	One filled bottle	Bottles	S-3	1.0	--	--

TABLE III. Examination of primary container

Category			Defect
Major A	Major B	Minor	
101			Leaker.
102			Broken.
103			Cracked.
	151		Not type specified.
	152		Chipped, thin spot or checked.
		201	Not clean.
	153		Cellulose band or plastic film adhesive tape for screw cap, missing, broken, split, brittle, torn or not tightly securing cap to bottle.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:43Z
Check the source to verify that this is the current version before use.

TABLE III. Examination of primary container (cont'd)

Category			Defect
Major A	Major B	Minor	
		202	Sealing tape (when applicable) for cap closure less than 3/4 inch (19 mm) wide.
		203	Overlap of sealing tape (when applicable) less than 1 inch (25 mm).
	154		Closure loose. 1/
	155		Metal closure has pitted rust. 2/
	156		Outside enamel coating for metal screw cap missing, incomplete, or easily abraded with fingernail.
	157		Label missing.
		204	Label insecure.
	158		Nomenclature on label missing, incorrect or illegible.
		205	Other required label information missing, incorrect, or illegible.
		206	Screw cap cross threaded.
	159		Liner and facing material missing from cap (when applicable).
		207	Bottle not restricted to 3/16-inch (5 mm) opening, maximum or 1/8-inch (3 mm) minimum, by means of removeable plastic insert.
	160		Closure not one of styles specified.
	161		Plastic cap cracked or broken.
		208	Label not hard sized or varnished.

1/ Procedure for determining tightness of closure for screw-type cap only: Carefully remove cellulose band or sealing tape if present. Place the primary container upright on top of a filled and closed fiberboard case. Grasp the side of the cap firmly with the finger tips and turn cap gently counter clockwise with a minimum of downward pressure for one complete revolution. If cap turns and the container remains stationary, a defect shall be scored.

2/ Rust that can be removed with a soft cloth shall not be considered pitted rust.

Check the source to verify that this is the current version before use.

TABLE IV. Examination for volume 1/

Category	Defect
Minor	
201	Volume of sauce less than 5-3/4 ounces (170 ml).

1/ Use a graduated cylinder or other valid measuring device. Make determination on product which is 65° to 75°F (18° to 24°C). Report results to the nearest 1/8 ounce or ml. Lot shall be rejected if sample data indicate a lot average volume of sauce less than specified volume calculated in ounces or ml, as applicable.

TABLE V. Examination of product 1/

Category	Defect
Major B	
151	Not brown to dark-brown in color.
152	Not a tart, peppery fruit-spice flavor. 2/
153	Body and character not typical of product.

1/ Presence of foreign material (e.g., filth, wood, paint, glass, metal, insects, etc.) shall be cause for rejection of the lot.

2/ Examine three sample units for flavor characteristics.

TABLE VI. Examination for label adhesion (level A) 1/

Category	Defect
Minor	
201	Displacement of label.

1/ Applicable only when requirements of 5.4.1.1 are specified. See 4.5.1.1 for procedure.

Source: https://assist.dla.mil -- Downloaded: 202610-26T11:43Z
Check the source to verify that this is the currentversion before use.

TABLE VII. Examination of product expansion 1/

Category	Defect
Major A	
101	Cracked or broken bottle or cap.

1/ See 4.5.1.2 for procedure.

4.3.5.1 Examination for packing, marking and shipping container closure and commercial packaging. Examinations shall be made in accordance with the applicable quality assurance provisions of PPP-G-460.

4.3.5.2 Examination of unit loads. Unit loads shall be examined in accordance with the quality assurance provisions of MIL-L-35078 and the applicable specification sheet for the type and class of load specified (see 5.3).

4.4 Testing of finished product. The finished product shall be tested for the characteristics specified in 3.4 in accordance with 4.5. The sample for testing shall be a one pint (473 ml) composite of product derived from the number of bottles indicated by inspection level S-2. Lot size shall be expressed in bottles. Results shall be reported to the same decimal place as specified for the characteristic. Test failure shall be cause for rejection of the lot.

4.5 Examination and test methods. Examination and test procedures which differ from those specified herein, unless otherwise excepted, may be used by the supplier if they provide a quality assurance equivalent to that specified. If the Government contracting officer determines that such procedures and controls do not provide, as a minimum, such quality assurance, the supplier will use the procedures set forth herein. In case of dispute as to examination or test results, the procedures specified herein will govern.

4.5.1 Examination procedures.

4.5.1.1 Water-resistant examination for label adhesive (no alternate procedures permitted). The label adhesive shall be examined for water-resistance as follows: Submerge glass container, with label affixed, into room temperature water for four hours. Remove from water and remove excess water by blotting with paper towel. Press finger firmly against the label (in area where the adhesive has been applied) and move finger (still pressed against the label) towards the bottom of the bottle. Displacement of the label indicates failure to meet this requirement.

Source: https://assist.dla.mil -- Downloaded: 202610-26T11:43Z
Check the source to verify that this is the current version before use.

4.5.1.2 Product expansion (no alternate procedure permitted). The filled and capped bottle shall be submerged in a water bath of 105°F (41°C). The temperature of the water shall not fluctuate more than 5°F (± 3°C) at any time. After 30 minutes, the bottles and caps shall be examined for cracks and breakage.

4.5.2 Test procedure.

4.5.2.1 Chemical analyses. Chemical analyses, shall be made in accordance with the following methods in Official Methods of Analysis of the Association of Official Analytical Chemists:

Test	Source	Method
Hydrolyzed vegetable protein		
Non-volatile solids	Chapter: Sugars and Sugar Products Section: Sugars and Sirups	Moisture-Vacuum drying 1/
Salt (as NaCl)	Chapter: Spices and other Condiments Section: Prepared Mustard	Total chlorides
Protein (Nx6.25)	Chapter: Fertilizers	Improved Kjeldahl method for nitrate-free samples
pH	Chapter: Beverage and Malt Beverages and Brewing Materials Section: Beer	Hydrogen-Ion concentration electrometric method
Tamarind		
pH	Chapter: Beverage: Malt Beverages and Brewing Materials Section: Brewing Sugars and Sirups	Hydrogen-Ion Activity (pH)

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:43Z
Check the source to verify that this is the current version before use.

Test	Source	Method
Tamarind (cont'd)		
Solids	Chapter: Sugars and Sugar Products Section: Sugars and Sirups	By means of refractometer
Acidity (calculated as Tartaric acid)	Chapter: Beverage: Non-alcoholic and Concentrate	Total acidity - official final action
Anchovy paste		
Salt (as NaCl)	Chapter: Fish and Other Marine Products	Salt (chlorine as NaCl) official final action
Fat	Chapter: Fish and Other Marine Products	Crude fat by acid hydrolysis - official final action
Finished products		
Non-volatile solids	Chapter: Sugars and Sugar Products Section: Sugars and Sirups	Moisture - vacuum drying 1/
Acidity (as acetic acid)	Chapter: Spices and Other Condiments Section: Prepared Mustard	Acidity

Test	Source	Method
Finished products (cont'd)		
Salt (as NaCl)	Chapter: Spices and Condiments Section: Prepared Mustard	Total chlorides
Total sugars	Chapter: Sugars and Sugar Products Section: Sugars and Sirups	Sucrose - chemical methods (reducing sugar invert)

1/ Sample unit shall be taken to near dryness on the steam bath before drying in the vacuum oven. Drying in the vacuum oven shall continue until constant weight has been attained. 100 percent - percent moisture = percent solids.

4.5.2.2 Tin coating weight test. Tin coating weight shall be determined by any method specified in PPP-C-96.

5. PREPARATION FOR DELIVERY

5.1 Packaging. The product shall be packaged in accordance with level A or C, as specified (see 6.1). A minus 1/4-ounce (7 ml) tolerance from the net volume specified in 5.1.1 and 5.1.2 will be allowed in any individual bottle, provided the average net volume of the bottles inspected in accordance with table IV, is not less than 6 ounces (177 ml).

5.1.1 Level A. A net volume of 6 fluid ounces (177 ml) of product shall be packaged in a regular sauce-type bottle normally used for the product. The opening in the neck of the bottle shall be fitted with a plastic insert to restrict the opening to not greater than 3/16-inch (5 mm) nor less than 1/8-inch (3 mm). The plastic insert shall be fitted in such a manner that it can be removed. The bottles shall be closed with a continuous thread, knurled screw cap with a curled edge made from commercial 0.50-pound electrolytic tinplate and coated on the outside with a corrosion-resistant enamel. The cap shall be fitted with a liner having a facing material suitable for the product. Alternatively, a plastic cap normally used for the product will be acceptable. The cap shall be screwed on tightly. The cap shall be secured in position with a shrunk-on cellulose band or pressure-sensitive, plastic film adhesive 3/4-inch (19 mm) wide tape applied around the circumference at the juncture of the cap and bottle. The tape shall overlap itself a minimum of 1 inch (25 mm). The filled and capped bottle shall have sufficient headspace and strength to withstand cracking or breaking when subjected to heat as specified in 4.5.1.2.

Source: https://assist.dla.mil -- Downloaded: 202610-26T11:43Z
Check the source to verify that this is the current version before use.

5.1.2 Level C. A net volume of 6 fluid ounces (177 ml) shall be packaged in a sauce type bottle normally used for the product in a manner to protect it from deterioration and damage during shipment from the supply source to the first consuming activity. The neck of the bottle shall be provided with a removable plastic insert to restrict the opening to not more than 3/16-inch (5 mm) nor less than 1/8-inch (3 mm). The supplier may use his standard practice when it meets these requirements.

5.2 Packing. The product shall be packed in accordance with the level A, B or C of PPP-G-460, as specified (see 6.1).

5.3 Unit loads (Military agencies). When specified (see 6.1), the shipping containers of the product shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified.

5.4 Labeling and marking.

5.4.1 Bottles.

5.4.1.1 Level A. For level A packaging, information required by the Federal Food, Drug, and Cosmetic Act and Regulations Promulgated Thereunder, shall be printed on a hard-sized or varnished label, affixed in position with a water-resistant adhesive (see 4.5.1.1).

5.4.1.2 Level C. For level C packaging, labeling shall be in accordance with the Federal Food, Drug, and Cosmetic Act and Regulations Promulgated Thereunder.

5.4.2 Shipping containers. Shipping containers shall be marked in accordance with PPP-G-460.

5.4.3 Unit loads. Unit loads shall be marked in accordance with MIL-L-35078.

6. NOTES

6.1 Ordering data. Purchasers should select the preferred options permitted herein and include the following information in procurement documents:

(a) Title, number and date of this specification.
(b) When inspection of plants is required for Civil agencies (see 4.2.1).
(c) When in-process examination is not required by Civil agencies (see 4.3.4).

Source: https://assist.dla.mil -- Downloaded: 202640-26T11:43Z
Check the source to verify that this is the currentversion before use.

(d) Levels of packaging and packing required (see 5.1 and 5.2).
(e) Type and class of unit load, when unit loading is specified (see 5.3).

6.2 Military agencies. Based on the conditions known or expected to be encountered during shipment, storage, and handling of the specific item being procured, the contracting officer should select the appropriate level of pack in accordance with the criteria established in AR 700-15/NAVSUPINST 4030.28/ AFR 71-6/MCO 4030.14D/DSAR 4145.7.

6.3 Destination inspection (For Civil agencies only). When the finished product has been inspected and passed at point other than destination, the contract should require that the product be inspected at destination for condition and quantity only.
