NOTICE OF CANCELLATION

INCH - POUND

MIL-DTL-46035C (MR)
NOTICE 2
1 October 2025

DETAIL SPECIFICATION

TITANIUM ALLOY: HIGH STRENGTH, WROUGHT (FOR CRITICAL COMPONENTS)

MIL-DTL-46035C (MR), dated 26 October 1999, is hereby cancelled. MIL-DTL-46035 covered a broad spectrum of high strength wrought titanium alloys including Ti 6Al-6V-2SN, Ti 6Al-4V, and others in annealed or heat treated conditions under a variety of shapes, manufacturing techniques, variations in strength levels for critical components other than armor, for components such as tubes, chambers, and nozzles. While no single modern wrought titanium specification exists to fully supersede MIL-DTL-46035, a broad portfolio of superior and well maintained specifications for wrought titanium alloys prepared by SAE International exists.

CAUTION: The supersession information is valid as of the date of this notice and may be superseded by subsequent revisions of the superseding documents.

SAE-AMS titanium specifications are individually broken out by alloy, wrought shape, application, strength, and cover additional titanium metallurgical engineering attributes including nondestructive testing (NDT). Most SAE-AMS specifications covering MIL-DTL-46035 have been Tier 1 or Tier 2 adopted with their Notices listed on DLA ASSIST. The level of detail and precision provided by the numerous SAE-AMS wrought titanium specifications far exceed MIL-DTL-46035 in all aspects and those documents may be obtained online at https://www.sae.org/. Additional superseding titanium adoptions (if needed) should contact the MR Preparing Activity.
