SUPERSEDING
FED-STD-313D
w/CHANGE Notice 1
March 21, 2000

FEDERAL STANDARD
MATERIAL SAFETY DATA, TRANSPORTATION DATA AND DISPOSAL DATA FOR HAZARDOUS MATERIALS FURNISHED TO GOVERNMENT ACTIVITIES

The General Services Administration has authorized the use of this federal standard by all federal agencies.

1. Scope and Purpose.

1.1 Scope. This standard establishes requirements for the preparation and submission of (Material) Safety Data Sheets (M)SDS by contractors who provide hazardous materials to government activities. MSDS and SDS are used interchangeably in this document.

1.2 Purpose. This Standard was developed to expand on the Occupational Safety and Health Administration (OSHA) definition for hazardous materials. Data obtained will be used within the government in employee safety and health programs and to provide for safe handling, storage, use, transportation and environmentally acceptable disposal of hazardous materials by government activities.

1.3 Application. Full compliance to the requirements of this standard is not applicable to contractors before June 1, 2015. Until then, contractors may still prepare and submit safety data sheets meeting the previous version of this standard.

2. Applicable Documents.

2.1 Government Publication. The issues of the following documents, in effect on the date of invitation for bids or request for proposal, form a part of this standard to the extent specified herein.

CODE OF FEDERAL REGULATIONS (CFRs)

Title 10 - Energy

Title 29 – Labor

Beneficial comments, recommendations, additions, deletions, clarifications, etc., and any other data which may improve this document should be sent to: General Services Administration (GSA), Engineering & Cataloging Division (QSDEC), 1800 F Street NW, Washington, DC 20405; or fedstd313@gsa.gov.

3. Definitions.

3.1 Contractor. The contractor is any supplier, manufacturer, or other party who provides material to a government agency.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:55Z
Check the source to verify that this is the current version before use.

3.2 Hazardous Material.

3.2.1 Any item or chemical which is a "health hazard" or "physical hazard" as defined by OSHA in 29 CFR 1910.1200, which includes, but is not limited to, the following:

- chemicals which are classified as posing one of the following hazardous effects such as acute toxicity (any route of exposure); skin corrosion or irritation; serious eye damage or eye irritation; respiratory or skin sensitization; germ cell mutagenicity; carcinogenicity; reproductive toxicity; specific target organ toxicity (single or repeated exposure); or aspiration hazard.

- chemicals which are classified as posing one of the following hazardous effects: explosive, flammable (gases, aerosols, liquids, solids); self-heating, organic peroxide, corrosive to metal, gas under pressure; or when in contact with water emits flammable gas.

- materials which in the course of normal handling, use, or storage operations may produce or release dusts, gases, fumes, vapors, mists or smoke which have any of the above characteristics.

3.2.2 Any item or chemical which is reportable or potentially reportable or notifiable as inventory under the reporting requirements of the Designation, Reportable Quantities, and Notification (40 CFR Part 302), or as an environmental release under the reporting requirements of the Toxic Chemical Release Reporting: Community Right To Know (40 CFR Part 372), which includes the following:

- chemicals with special characteristics which in the opinion of the manufacturer can cause harm to people, plants, or animals when released by spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discarding of barrels, containers, and other receptacles).

3.2.3 Any item or chemical which, when being transported or moved, is a risk to public safety or an environmental hazard and is regulated as such by one or more of the following:

-Department of Transportation Pipeline and Hazardous Materials

Regulations 49 CFR 100-180);

-International Maritime Dangerous Goods (IMDG) of the International

Maritime Organization (IMO) Dangerous Goods Regulations (DGR);

-Dangerous Goods Regulations of the International Air Transport

Association (IATA);

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:55Z
Check the source to verify that this is the current version before use.

-Technical Instructions for the safe Transport of Dangerous Goods by Air of the International Civil Aviation Organization (ICAO); and

-US Air Force Manual 24-204 (Interservice Publication, Preparing Hazardous Materials for Military Air Shipments (AFMAN 24-204IP).

3.2.4 The item or chemical is a special nuclear, source, or by-product material as defined in 10 CFR or is regulated or referred to as radioactive under one or more of the referenced documents in paragraph 2 above.

3.2.5 End items incorporating hazardous material (including those contained in removable components when originally installed in the end item) when the incorporation does not eliminate the hazardous nature throughout the life cycle of the end item.

3.3 Preparer. The preparer is the entity that developed the SDS and has provided the mailing address and phone number for contacting the manufacturer, and the emergency response phone number. The preparer is responsible for the accuracy of the technical data in the SDS. The preparer may or may not be the contractor furnishing the material to the government.

3.4 End item. The end item is a final combination of assemblies, components, modules, and parts which is designed to perform an operational function and is ready for intended use.

4. General Statement of Requirements

4.1 Referencing this standard in purchase documents. Government agencies shall reference this standard in commodity specifications, contracts, and other purchase documents to assure inclusion of adequate requirements and clear instructions to contractors for the preparation and submission of SDSs.

4.2 Preparation and Submission of the SDS

4.2.1 Items requiring an SDS. For commodity-like items, contractors shall furnish a separate SDS for each individual item which is defined as hazardous in section 3.2, or which is required by the contract or order, or as specified in Appendix A. For end items as defined in 3.2.5, contractors shall also furnish a separate SDS for each individual hazardous material incorporated into an end item. However, when specified in the contract or order, the requirement of SDSs for end items may be waived if the Head of the Contracting Activity determines that it is in the best interest of the Government to use alternative approaches of obtaining the necessary data. See paragraph 6.2 for additional information on intent.

4.2.2 Preparation of SDS. Effective June 1, 2015, the SDS shall meet the latest requirements of the Occupational Safety and Health Act (OSHA)

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:55Z
Check the source to verify that this is the current version before use.

in 29 CFR 1910.1200 OSHA Hazard Communication Standard commonly known as the HazCom or HCS, and its referenced United Nations Economic Commission for Europe (UNECE) Globally Harmonized System (GHS) of Classification and Labeling of Chemicals, commonly known as the GHS Purple Book. The SDS shall be compliant with the GHS. All sixteen (16) sections including the section numbers and headings, and associated information under each heading shall be completed with at least the minimum information and in the order listed in Appendix D of the HCS, and Annex 4 of the current GHS Purple Book, to include structured data, compliant with the United Nations Centre for trade facilitation and electronic business (UN/CEFACT) XML schema. Agencies may prescribe its UN/CEFACT XML-compliant schema in the contract or order, or submit standard XML SDSs per the GHS Purple Book. For the Department of Defense (DoD), each section shall contain all legally required information and additional data identified by the current version of the Product Hazard Data, Extensible Mark-up Language (PHD/XML) submission schema. For GSA, the SDS data shall comply with UN/CEFACT standard XML schema and shall include the additional information of 4.3, if not already covered. Before June 1, 2015, SDSs meeting the requirements of the previous 1994 HCS and ANSI Z400.1/Z129.1 or any similar standard shall be acceptable.

4.2.2.1 At all times, the SDS preparers must indicate in section 2 when the SDS is available in languages other than English. Information required under paragraph 4.3 must also be provided. Contractors, who have not manufactured the hazardous material they are furnishing to the government, may append the government identifiers specified in 4.3.1, 4.3.2, and 4.3.3 to the preparer's SDS, provided the SDS meets all other requirements of this standard. SDSs shall not be considered complete and accurate if they are containing obvious errors or omissions, and/or fail the XML schema definition for the receiving agency.

4.2.3 Submission of the SDS.

4.2.3.1 Effective June 1, 2015, unless otherwise specified in the contract or order, electronic submission of the SDS to the contracting officer or to the Government receipt points in paragraph 5.1 shall be the only way acceptable. The electronic format of the transmission shall be XML in the UNECE definition, defined by the UN/CEFACT and implemented by the receiving agency’s XML Schema. Before June 1, 2015, physical copies shall be submitted as specified in the contract or order. Electronic submission may be accepted depending on the receiving agencies’ capabilities.

4.2.3.2 At all times, unless otherwise specified in the contract or order, a physical copy of the SDS(s) shall be furnished with each shipping container and/or with the shipping documentation accompanying each shipment. When authorized by the contracting officer, contract or order electronic transmission of SDS in advance of shipment shall be permitted.

4.2.4 Revision of SDS. The contractor shall submit a revised SDS when there has been a change in the composition or characteristics of the product or when the contractor has knowledge of new information which affects any of

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:55Z
Check the source to verify that this is the current version before use.

the information on the SDS, thus rendering the original SDS incomplete. The revised SDS shall be submitted to the Service/Agency SDS receipt point(s) listed in paragraph 5 for the Military service or Federal agency that purchased the item, and shall be included with future shipments. When a hazardous product is repackaged, relabeled, or renamed, the chemical product and company name on the SDS, as well as the label information, Section 2 shall match that on the package.

4.3 Additional information required. In addition to all health and safety information required in 4.2.2, the SDS shall contain, or have appended, information in 4.2.2.1 and 4.3.1 through 4.3.3 and also information in 4.3.4 through 4.3.7 if not already covered.

4.3.1 The contract or solicitation number, manufacturers Commercial and Government Entity (CAGE) code, and contractors name and CAGE code.

4.3.2 The national stock number, activity control number, or local stock number specified in the contract. If these are not present, enter the Federal Supply Schedule Special Item Number or Category for the item.

4.3.3 Where applicable, the specification reference including specification number, revision letter, type, grade, and class.

4.3.4 The chemical and common name(s), Chemical Abstract Service (CAS), Registry number(s), and percentage(s) by weight of composition of all ingredients that are defined as hazardous in paragraph 3.2. The percentage may be specified as an upper limit or upper bound, as defined by 40 CFR 372.45. The specific hazardous chemical information must be provided unless it meets the 'trade secret' criteria of 29 CFR 1910.1200 or 40 CFR 350. The contractor shall treat trade secret data consistent with 29 CFR 1910.1200 or 40 CFR 350, as applicable. The contractor must indicate the authority under which trade secret data is withheld. The Government must maintain trade secret data in confidence, and only release the data consistent with 29 CFR 1910.1200 or 40 CFR 350, as applicable.

4.3.5 The OSHA Permissible Exposure Limit (PEL), ACGIH Threshold Limit Value (TLV), and any other exposure limit known to the preparer for the product as a whole, or any of its hazardous constituents. This may include recommendations made by recognized toxicological groups, the manufacturer, or importer preparing the SDS.

4.3.6 The toxic chemicals as specified under EPA’s 40 CFR parts 355, 370, and 372.

4.3.7 Transportation data, to include the Proper Shipping Name, United Nations or North America Identification Number, Hazard Class, Packaging Group.

6. NOTES

6.1 Intended use. This standard is intended to capture the requirements for furnishing GHS-compliant SDSs by contractors who furnish hazardous material to the government. The effective date for GHS-compliant SDSs is set for June 1st, 2015. Before this date, contractors may prepare and submit MSDSs/SDSs in accordance with revision D, w/CN1 or revision E, or both.

6.2 Intended use for end items (or articles). It is not the intent of the government to collect or have contractors generate unique MSDSs for articles, but to collect and monitor SDSs which would have been made available to the prime contractor during the manufacturing process (from his subcontractors) for the components and subassemblies making up the larger end item. The exception to this process would be when the prime contractor is manufacturing or generating new chemicals as a result of the manufacturing process. Despite of the aforementioned, this revision of the standard provides some flexibility in the approach by permitting a waiver to requiring SDSs for end items if the Head of the Contracting Activity determines that it is in the best interest of the Government to use alternative approaches of obtaining the necessary data. Alternative approaches may include, but is not limited to, the inclusion of the necessary data as distinct deliverables under the contract.

10.2 Other FCGs. An SDS is required for all hazardous items defined in paragraph 3.2. Table II lists some examples of hazardous items in other Federal supply items not listed in Table I.

This is not an all inclusive list, but is only meant as guidance.

Table I – Examples of FSCs In Which Most Items Are Hazardous

FSC	TITLE	EXAMPLES OF HAZARDOUS ITEMS
12	Fire Control Equipment	Initiator propellants, cartridges power device
13	Ammunition & Explosives	Explosive Devices, fire starter, flares
14	Guided Missile Components & Accessories	Cartridges power devices, rockets, PCB’s
15	Aircraft & Airframe Structural Components	Radioactive Materials
16	Aircraft Components & Accessories	Items containing asbestos
22	Railway Equipment	Items containing asbestos
25	Vehicular Equipment Components	Items containing asbestos
26	Tire & Tubes	Items containing flammable or toxic compounds
34	Metalworking Machinery	Compressed gases, cleaners, acids, flux, and supplies containing or producing hazardous fumes
36	Miscellaneous Machinery	Flammable or toxic hazardous fumes
42	Fire Fighting, Rescue & Safety Equipment	Extinguishing agents, repair and refill kits containing hazardous chemicals, items containing compressed gases or initiating charges
53	Hardware & Abrasives	Asbestos material, lead caulking, hazardous chemicals, items producing hazardous dust
54	Prefabricated Structures & Scaffolding	Repair kits containing hazardous chemicals
56	Construction & Building Materials	Cutback asphalt, deck and floor covering, sealing compounds, asbestos, formaldehyde, repair kits containing hazardous chemicals
58	Communication, Detection, & Coherent Radiation Equipment	Circuit cooler items containing ozone depleting substances, cleaners with hazardous chemicals
59	Electrical & Electronic Equipment Components	Items with PCB’s, radioactive materials, flammable solvents, asbestos, or magnetic items
61	Electric Wire, & Power Distribution Equipment	Lithium, mercury, lead-acid, nickel-cadmium batteries
