DATA ITEM DESCRIPTION

Title: SOFTWARE/HARDWARE LOG & TELEMETRY REPORT (SHL&TR)

Number: DI-IPSC-82471
AMSC Number: 10533
DTIC Applicable: No
Preparing Activity: TM
Applicable Forms: N/A

Approval Date: 20250218
Limitation: N/A
GIDEP Applicable: No
Project Number: IPSC-2025-003

Use/relationship: The system telemetry information report contains the format, content, and delivery requirements for aggregated information generated from the automated collection of system security, health, and status data from system logs, agents, and/or sensors.

This DID contains the format, content, and intended use information for the data deliverable resulting from the work task described in the solicitation.

Requirements:

1) Format. The format of the SHL&TR shall adhere to the format described under content. Digital delivery is encouraged.
2) Content:
    a) Data Types: the SHL&TR shall contain the following information types of system information:
        i) System Performance Metrics: data and information pertaining to the physical performance characteristics of the system. Examples include CPU usage, disk usage, memory usage, power output, rotations per minute, and number of usage cycles.
        ii) System Health Metrics: data and information pertaining to the correct functioning of the system. Examples include error rates, response times, error codes/messages, shock measurements, and non-nominal measurements.
        iii) User Activity Metrics: data and information pertaining to user actions and behavior. Examples include login attempts, page views, times of sessions, user inputs, subsystem/module usage, user persona information, and location data.

Check the source to verify that this is the current version before use.

iv) Network Traffic Metrics: data related to network communications. Examples include bytes sent, bytes received, network addresses, ports and services, signal strengths, dropped packets, routing, and channel frequencies.

v) Security Metrics: data and information related to hostile action or system intrusion. Examples include login failures, invalid access attempts, improper privileges escalation attempts, invalid data exfiltration attempts, and alarm activations.

vi) Process Metrics: data and information related to the functioning of a process or team, often by data collected from an automated workflow tracking or ticketing system. Examples include work in progress (WIP), cycle times, throughput, velocity, number of deployments, and source code measurements.

b) Data formats: The SHL&TR shall contain data according to the following formats:

i) Aggregated data files. For use in periodic delivery of aggregated data in a file format. Due to the volume of data that is generated by automated telemetry, delivery in a file format should not be requested on an as-generated basis unless automated delivery to a government-accessible database is available. Deliver according to one of the file formats:

(1) JavaScript object notation (JSON)

(2) Comma separated values (CSV)

(3) Delimiter separated file

(4) Extensible Markup Language (XML)

(5) Avro

(6) Parquet

(7) Microsoft Excel file (.xlsx)

ii) Application Programming Interface/Automated Data Streams. Delivery of data via an automated data pull/delivery according to one of the following formats/methods:

(1) Representational state transfer (REST)

(2) Open API/Swagger

(3) Message queue

Check the source to verify that this is the current version before use.

(4) Compatible COTS Software as specified in PWS

iii) Data visualization or automated report. Delivery of information in an automated console, data visualization software, or web page. Report must be accessible by the government.

End of DI-IPSC-82471
