DATA ITEM DESCRIPTION

Title: System Key Management Plan (SKMP)

Number: DI-SCRE-82524
AMSC Number: 10642
DTIC Applicable: No
Preparing Activity: 19
Applicable Forms: N/A

Approval Date: 20260410
Limitation: N/A
GIDEP Applicable: No
Project Number: SCRE-2026-003

Use/Relationship:

The System Key Management Plan (SKMP) is used by programs to facilitate key material ordering from the National Security Agency (NSA) and provisioning of that keying material to the Contractor. This is accomplished by identifying the cryptographic equipment used by the system and defining the specific key material required.

The SKMP further describes the use and control of cryptographic products and services used by a cryptographic application (cryptographic engine, cryptographic module, or End Cryptographic Unit (ECU), or system) throughout its lifetime. The SKMP also identifies and documents the capabilities that the cryptographic application requires from the current and planned key management infrastructure.

When directed in the Statement of Work, the SKMP includes Annex 1, *Cryptographic Security Plan* (CSP). This Annex describes the protection and recovery measures put in place for any cryptographic equipment, components, or keying material that may come into contact with or be operated in the presence of unauthorized personnel during the system's life cycle or due to failed launch.

This DID contains the format, content, and intended use of information for the data deliverable resulting from the work task described in the solicitation.

Requirements:

1. **Reference Documents.**

    1.1. Committee on National Security Systems Policy (CNSSP) No. 12, *Cybersecurity Policy for Systems Used to Support National Security Missions*, February 2018

2. **Format.** The Contractor's SKMP shall contain narrative content, diagrams, and technical detail addressing each of the topics delineated in the following major sections and subsections. Provide data using the electronic preparation instructions below.

    2.1. **INTRODUCTION**

        2.1.1. Document Overview

        2.1.2. System Overview

        2.1.3. Referenced Documents

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:04Z
Check the source to verify that this is the current version before use.

2.1.4. Government Documents

2.1.5. Non-Government Documents

2.2. **ABBREVIATIONS AND ACRONYMS**

2.3. **KEY AND CERTIFICATE MANAGEMENT PLAN PROCESS**

2.3.1. Cryptographic Application Description and Security Services

2.3.2. Description/Purpose of Cryptographic Application

2.3.3. Level of Information the Cryptographic Application is Protecting

2.3.4. Security Services the Cryptographic Application Provides

2.3.4.1. Confidentiality

2.3.4.2. Integrity

2.3.4.3. Non-repudiation

2.3.4.4. Access Control

2.3.4.5. Identification and Authentication

2.3.4.6. Availability

2.3.5. Operational Environment

2.3.6. Requirement for Allied/Coalition Interoperability

2.3.7. Key Management Products and Services Requirements

2.3.7.1. Key Management Products and Service Types

2.3.7.2. Quantity/ECU to be Keyed

2.3.7.3. Projected Quantity of ECUs

2.3.7.4. Algorithms

2.3.7.5. Key Specification

2.3.7.6. Protective Techniques

Check the source to verify that this is the current version before use.

2.3.7.7. Key Period

2.4. **SKMP ANNEX 1-*Cryptographic Security Plan* (CSP) [WHEN DIRECTED]**

2.4.1. **INTRODUCTION**

2.4.1.1. Annex Overview

2.4.1.2. System Overview

2.4.1.3. Program Reference Documents (Government and Non-Government)

2.4.1.4. Program Compliance Documents (Government and Non-Government)

2.4.2. **ABBREVIATIONS AND ACRONYMS**

2.4.3. **PROGRAM CRYPTOGRAPHIC SECURITY PLAN**

2.4.3.1. Description of Program Lifecycle (Schedule, Milestones, and Overlay of Same to Sections 3.2 – 3.10, below)

2.4.3.2. Protection Measures: Cryptographic Equipment

2.4.3.3. Recovery Measures: Cryptographic Equipment

2.4.3.4. Protection Measures: Associated Components

2.4.3.5. Recovery Measures: Associated Components

2.4.3.6. Protection Measures: Keying Material

2.4.3.7. Recovery Measures: Keying Material

2.4.3.8. Description of Protection Measures: Access Control Procedures for Authorized Personnel

2.4.3.9. Description of Protection Measures: Control / Prevention of Access by Unauthorized Personnel

2.4.3.10. Description of Protection Measures: Action Plan for Failed Launch

2.4.3.11. Description of Protection Measures: Action Plan for Deorbiting of Space Platform

2.4.3.12. Contractor’s Declaration of Implementation of Program Compliance Documents

2.4.3.13. Contractor’s Estimation of CSP Sufficiency and Assessment of Residual Risk

2.5. **SKMP/SKMP ANNEX 1 COMPLIANCE MATRIX**

The Contractor's SKMP and SKMP Annex 1 (when directed) detailed in Requirements above, shall contain (either in the body of the document, or as an attachment to it) a complete Compliance Matrix that identifies where each line item is addressed in the SKMP. The "Requirement Met?" column (D) is to be left blank to be completed by the Government during its review.

SYSTEM KEY MANAGEMENT PLAN (SKMP) COMPLIANCE MATRIX			
A	**B**	**C**	**D**
Item #	**Required Narrative / Technical Description**	**Where Described in Contractor's SKMP (page & paragraph #)**	**Requirement Met?**
1	Describe key material management for command, telemetry, cross, and mission data links.		
2	Describe the keying scheme(s) for each cryptosystem.		
3	Describe and specify the management of all keys distributed and employed from point to generation to destruction through all phases of the system lifecycle.		
4	Describe and specify Space Vehicle (SV) integration and test phase locations.		
5	Describe primes and subordinates (prime and subcontractors) requiring COMSEC materials for subsystem development activities.		
6	Describe any use of COMSEC materials in development, Integration & Test, simulators, launch support, and operations, as applicable.		
7	Describe planned or sustained use of program COMSEC material at Factory during operations.		
8	Describe closeout of Factory COMSEC material, post-launch.		
9	Describe Space Ground assets/build out at factory sites and operational locations.		
10	Describe/provide a master schedule with COMSEC materials and need dates for each site.		
11	Contain/provide an Annex that specifies the actual launch configuration of all COMSEC equipment and key assigned to each link.		
12	Describe in the Annex all program locations/assets used at system fly out to enable the System Operations organization to identify all system resources in use that require disposition.		
13	Describe the "as flown" assignment of key editions and flight equipment to each satellite.

Check the source to verify that this is the current version before use.

14	Describe the COMSEC architecture of the program.		
15	Describe where, as a part thereof or separately, a COMSEC Operations and Constraints and On-Console Contingency Plan is maintained.		
16	Describe how the SKMP is maintained under configuration control.		
17	Describe the mission, number of satellites, and overview of the communications architecture.		
18	Provide a schedule with key delivery dates referenced to the system development milestones, including projected launch dates.		
19	Provide a table of projected equipment and key material need dates, quantities, and delivery location.		
20	Provide an overview of the different communication links the system will employ to include the links that will need cryptographic security and the classification level of the data for each link.		
21	Provide a top-level architectural diagram (typically OV-1) illustrating how the links are interrelated with the ground stations and satellites.		
22	Describe how the command uplink(s) and authentication, the telemetry downlink(s), the mission downlinks, and the crosslinks, will be employed in the system to include identification of the AVE and GOE equipment to the link(s).		
23	Describe all the various system units that will require key material for both AVE and GOE command links.		
24	Describe cryptoperiods, to include estimations of mission/satellite life expectancies, to determine the time length for use of each unique variable before switching variables.		
25	Describe the types and quantities of chips, modules, AVE and GOE for the uplink to include redundant strings, configurations and spares.		
26	Does the document address TRANSEC, if required to include the TRANSEC systems, features, and key requirements?		

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:04Z
Check the source to verify that this is the current version before use.

27	Describe key formats specified for each type of key/location needed, (e.g. floppy disk, PROM, electronic) to include how many unique variables on the key media for each type/link.		
28	Describe and identify key generation process/lead times, including need dates to support schedules for each development phase.		
29	Provide a list of COMSEC Program compliance and reference publications, regulations, instructions, and manuals utilized in development of the SKMP. This listing shall include regulations government key duplication, production, storage, repair and replacement, destruction, identification and control tracking systems, inspections, compromise, and loss in relationship to key material.		
30	Identify and describe the Controlling Authority for COMSEC material accountability and prescribed usage.		
31	Describe all supported cryptographic modes (e.g., bypass, secure, others) to include specific links requiring bypass.		
32	Describe link loss and recovery scenarios.		
33	Describe key indexing times, to include key edition switching times for normal operations and compromise, loss, or equipment failure.		
34	Describe system tests requiring test, and test plans for each.		
35	Describe transportation procedures for keyed embedded devices in SVs, either within the SKMP, or by reference to a Transportation Plan.		
End of SKMP Compliance Matrix
