Data Item Description

Title: BUILT-IN-TEST (BIT) ANOMALY REPORTING

Number: DI-SESS-82539
AMSC Number: N10660
DTIC Applicable: N/A
Preparing Activity: AS
Applicable Forms: N/A

Approval Date: 20260505
Limitation: N/A
GIDEP Applicable: N/A
Project Number: SESS-2026-023

Use/relationship: The BIT Anomaly Report is used to assess system health, diagnostic performance, and configuration-specific reliability during production acceptance testing, post-fielding induction, and recertification testing. The reported data supports failure reporting, analysis, and corrective action processes (e.g., FRACAS); verification of system readiness for fielding or return to service; and identification of trends related to manufacturing defects, maintenance-induced faults, and recurring failure modes. The data is also used to evaluate BIT effectiveness, including fault detection and isolation capability, and to inform safety, airworthiness, and sustainment decisions. BIT anomaly data shall be traceable to specific hardware and software configurations to enable correlation with test results, maintenance actions, and corrective actions.

This DID contains the format, content, and intended use information for the data product resulting from the work task described in the contract SOW.

Requirements:

1. Reference Documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. Format. The report shall be in contractor's format.

3. Content. For each configuration item being reported, the report shall contain the following for each BIT occurrence:

3.1. Unique anomaly identifier

3.2. Date and time of occurrence

3.3. Test phase (Production, Induction, Recertification)

Check the source to verify that this is the current version before use.

3.4. BIT type (PBIT, CBIT, IBIT)

3.5. Fault code and description

3.6. Affected configuration item (part number, serial number, lot number)

3.7. Software/firmware version and configuration baseline

3.8. Operating conditions and test configuration

3.9. Severity/impact assessment

3.10. Occurrence count or recurrence status

3.11. Disposition status (open, under investigation, closed)

3.12. Linkage to deficiency reports, FRACAS, or corrective actions as applicable
